**STS17.2 Stainless Steel Compact Pipeline Connector Steam Trapping Station**

STS17.2 version with single upstream isolation

STS17.2 version with double upstream isolation

**Description**

The STS17.2 compact pipeline connector steam trapping station has been designed to provide a convenient ready to install trapping solution, which includes: upstream and downstream isolation valves (2), body incorporating universal connector + strainer (1) and check valve blanking plug (16).

**Available types**

The STS17.2 is available with either single or double upstream isolation.

The STS17.2 trapping solution incorporates Spirax Sarco universal connector, which allows speedy trap maintenance. The following universal connector steam traps (sold separately) can be used with this pipeline connector enabling it to be tailored to suit any application:

- UTDE2 thermodynamic steam traps.
- UB300 and UB30H inverted bucket steam traps.
- UBP32 balanced pressure steam trap.
- UBP32 bimetallic steam trap.

**Standards**

These products fully comply with the requirements of the European Pressure Equipment Directive 97/23/EC.

**Certification**

These products are available with certification to EN 10204 3.1 at the time of order placement. For other certification contact Spirax Sarco.

**Sizes and pipe connections**

1/2", 3/4" and 1" screwed NPT or socket weld (BSP optional). Note: All certification/inspection requirements must be stated at the time of order placement. For other certification contact Spirax Sarco.

**Optional extras**

Integral sensor type SBL1 (steam only) or WLSL1 (for waterlogging) for use with RIC or WLSL1 with DIODE for use with RIC are available as optional extras. Please note that the optional monitoring of the steam trap. Please note that the optional Spirax SBL1 and WLSL1 sensors must not be fitted when the STS17.2 is installed in a vertical application.

BDV1 blowdown valve is also available for cleaning the strainer during operation. Care should be taken when using the BDV1 blowdown valve as the discharge may be hot. Please note that a BDV1 cannot be used when a Spirax sensor has been chosen to be part of the unit.

Retrofit double isolation valve and spool piece to convert a single upstream isolation version to double isolation.

Insulation jacket is available to reduce heat loss and energy wastage. See separate literature.

**Materials**

No.	Part	Material
1	Body	Stainless steel ASTM A351 Gr. CF8
2	Isolation ball valves	Stainless steel ASTM A162 F316L
3	Handle	Mild steel ENP coated
16	Check valve blanking plug	Stainless steel ASTM A276 431
19	Strainer cap	Stainless steel ASTM A382 416

## Our product range - designed to meet your challenges

We offer our customers a complete range of products that cover the entire steam and condensate loop from spare parts, steam trap stations, a complete plant room package, a blowdown valve to a complete boiler house. Whatever your requirement we can help you.

In addition you have the reassurance that because we design, develop and manufacture virtually all of the products we sell, we know what we are offering you, we can advise you technically, and continue to support you after you buy.

The most comprehensive range of products available from one company, anywhere in the world.

## Spirax Sarco Services

- ISO/DIN range
- ASME/API range
- JIS/KS range
- ISO 9000 since 1994
- ISO 9001: 2000
- PED, CE approvals
- Products tested
- Innovation
- Extensive CAD system
- Fit for purpose design
- University links for research
- All customer technical information available on our website at: [SpiraxSarco.com/global/us](http://SpiraxSarco.com/global/us)
- 12,000 steam products listed

## How To Use This Book

Accepted international designations for limiting conditions are used throughout this catalog. An explanation of Pressure Shell Design Conditions and Limiting Operating Conditions follows:

### **Pressure Shell Design Conditions:**

- PMA - Maximum Allowable Pressure
- TMA - Maximum Allowable Temperature

These are the maximum pressures and temperatures to which the pressure shell (body, cover, bolting, etc.) of the product may be safely and permanently exposed. The product may or may not operate properly at these maximum conditions; the internal parts may be damaged or destroyed, but the pressure-retaining components will not break or become permanently distorted. It is sometimes permissible to exceed the maximum allowable conditions temporarily. For example, a cold hydraulic test at 1-1/2 times the cold PMA is usually permitted.

Because the maximum allowable pressure depends on the temperature, there is no one value for PMA. Quoting only the cold PMA without mentioning the corresponding temperature could be misleading. PMA is usually given at three temperatures:

- Cold
- Maximum Allowable Saturated Steam Temperature
- Maximum Allowable Temperature

There is only one value for maximum allowable temperature (TMA); the corresponding pressure range is given in this literature.

PMA and TMA are strictly safety related. They have very little to do with the actual operation of the product.

### **Limiting Operating Conditions:**

- Maximum Operating Pressure - PMO
- Maximum Operating Temperature

PMO is the maximum fluid (steam, gas or liquid) pressure at which the product will operate properly. Depending on the type of product, PMO may or may not be related to temperature. Unless otherwise indicated, the downstream pressure is assumed to be 0 psig.

Maximum operating temperature may depend on superheat tolerance, internal materials (e.g. neoprene o-rings), pressure shell design conditions, or any combination of these factors. Depending on the type of product, it usually varies with the actual operating pressure.

An example on the opposite page graphically illustrates limiting conditions.

## Example of Limiting Conditions

### BPT21 Steel-Bodied Balanced Pressure Thermostatic Steam Trap

#### Limiting Operating Conditions

Maximum Operating Pressure (PMO)	304 PSIG
Maximum Operating Temperature	437°F at 304 PSIG; 90°F of Superheat at Operating Pressures below 282 PSIG

#### Pressure Shell Design Conditions

PMA (Maximum Allowable Pressure)	362 PSIG/0-248°F 309 PSIG/424° F 188 PSIG/752°F
----------------------------------	---

TMA (Maximum Allowable Temperature)	752°F/0-188 PSIG
-------------------------------------	------------------

## Steam Sizing Chart

### Determining the Value $C_v$

$C_v$  calculation is an interactive process requiring knowledge of valve dynamics, piping geometry factors, and outlet velocities. In practice, this sizing chart is based on empirical values and will cater for most applications.

### How To Use the Chart

**Example 1.** To find  $C_v$  value for critical flow application.

Steam Demand	1500 lb/hr
Upstream Pressure	55 psi guage 70 psi absolute

Refer to Selection Chart Opposite.

- 1) Draw 1500 lb/hr flow line (A-B)
- 2) Draw a horizontal line from 70 psi absolute to critical pressure drop line (C-D). At this intersection drop a vertical line.
- 3) At the crossing point of these two lines, read off the  $C_v$  value required, i.e.  $C_v$  13
- 4) Select valve size required from the appropriate valve type technical information sheet.

**Example 2.** To find  $C_v$  value for non critical flow application.

Steam Demand	500 lb/hr
Upstream Pressure	85 psi guage 100 psi absolute
Downstream Pressure	65 psi guage 85 psi absolute

- 1) Draw 500 lb/hr flow line.
- 2) Draw a horizontal line from 100 psi absolute At the intersection with 20 psi pressure drop, draw a vertical line.
- 3) At the crossing point with the 500 lb/hr horizontal line read off the  $C_v$  value required, i.e.  $C_v$  3.8
- 4) Select valve size required from the appropriate valve type technical information sheet.

### How to Use Formula

Proceed by calculating the required  $C_v$  from given flow data, having prior determined whether the flow is critical or sub-critical. The following equations have been adapted from the ISA S75.01 standard to allow for practical everyday use without significant sacrifice in accuracy.

#### For Steam Service

Subcritical Flow	Critical Flow
When $\Delta P$ is less than .81 ( $P_1/2$ )	When $\Delta P$ is greater than .81 ( $P_1/2$ )

#### For Saturated Steam

$$C_v = \frac{w}{2.1 \sqrt{\Delta P (P_1 + P_2)}} \quad \left| \quad C_v = \frac{w}{1.647 (P_1)}$$

$C_v$  = Valve Coefficient  
 $P_1$  = Upstream Pressure, psia  
 $P_2$  = Downstream Pressure, psia  
 $\Delta P$  = Pressure drop  $P_1 - P_2$ , psia  
 $w$  = Flow Rate, lb/h

This chart is for example only. A complete chart for sizing is overleaf.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

## PM Series Pneumatic Actuators for B Series Control Valves

### Description

PM Series compact multi-spring diaphragm actuators are available in three sizes to suit the requirements of our ½" to 2" B Series control valves at various pressures. Actuators are available with an optional, top-mounted hand-wheel. A full stainless steel version is also available on special request.

While many of these actuators will be operated directly by a 3-15 psig control signal, any of the Spirax Sarco range of positioners can be mounted with the optional spindle adaptor (part no. 3578000).

### Available Types and Options

Standard version with corrosion resistant paint finish.  
Full stainless steel version to special enquiry.  
Spring-to-retract spindle.  
Spring-to-extend spindle.

### Technical Data

Ambient temperature range	-4F to 230°F
Maximum air pressure	60 psig
Stem travel	¾"
Air supply connection	¼" NPT

### Materials

Diaphragm housing	Carbon Steel
Yoke	Ductile Iron
Diaphragm	Reinforced Nitrile
Gaskets	Neoprene
Springs	Steel (50CR4V2)
Bolts and nuts	Carbon/alloy steel

### Available Spares

Diaphragm kit  
Spring Kit  
Spindle seal kit

### Selection Guide

Type	PM	<b>PM</b>
	PMS	
Actuator size	2 = 36 sq.in 3 = 60 sq.in 7 = 109 sq.in	<b>3</b>
Spindle travel	2 = ¾"	<b>2</b>
Spring range	0 = 3-15 psig 1 = 3-9 psig 2 = 9-15 psig	<b>0</b>
Spring action	E = Spring extend R = Spring retract	<b>E</b>
Manual override	H = Handwheel	

Example:  
1 x PM320E pneumatic actuator.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-1-622-US 11.13

# PM Series Pneumatic Actuators for B Series Control Valves

## Maximum differential pressures for ANSI/FCI 70-2 Class IV and VI shut-off

Note: The actuator must be fully vented to achieve the differential pressures shown below. If the control system does not allow the actuator to be vented, please contact Spirax Sarco for assistance.

### Spring Retract

Closes B Series 2-way valve and closes top seat of B Series 3-way valve on loss of air.

Model	Net Spring Range (psig)	Min. Air Pressure (psig)	1/2"		3/4"		1"		1-1/4"		1-1/2"		2"

## B Series 1/2" to 2" 2-Way and 3-Way Bronze Control Valves

### Description

The B Series is a light-industrial bronze control valve range for pressure, flow and temperature control of steam, gases and liquids. Available in 2-Way and 3-Way body configurations for modulating control with PM Series pneumatic actuators or Belimo NV or AF Series electric actuators. For enhanced control, any of the extensive range of Spirax Sarco positioners may be fitted to pneumatic actuators.

### Technical Specifications

Body sizes	1/2", 3/4", 1", 1-1/4", 1-1/2", 2"	
Body material	ASTM B62	
Connection	Screwed NPT	
Body rating	400 psig @150°F / 250 psig @ 400°F (ASME B16. 15 Class 250)	
Characteristic	2-Way: Equal Percentage or Linear	3-Way: Linear
Rangeability	50:1	
Temperature range	-20° to 400°F	
Leakage Rate	Metal Seating (2 Way and 3 Way Valves)	ANSI/FCI 70-2, Class IV
	PTFE Soft seating (2 Way, Equal Percentage only)	ANSI/FCI 70-2, Class VI

### Operating Range

 Product not to be used in this region.

## SPIRA-TROL Two-port Control Valves ASME Standard LEA, LFA and LLA ½" to 4"

### Description

SPIRA-TROL is a range of two-port single seat globe valves with cage retained seats conforming to ASME standard. These valves are available in three body materials in sizes ranging from ½" to 4". When used in conjunction with a pneumatic or electric linear actuator they provide characterized modulating or on/off control.

### Sizes and pipe connections

Body material	Connections	Type	Size range
Cast iron	Screwed NPT	LEA31	½", ¾", 1", 1¼", 1½" and 2"
	Flanged ASME class 125	LEA33	1", 1½", 2", 2½", 3" and 4"
Carbon steel	Flanged ASME class 150	LEA43	½", ¾", 1", 1½", 2", 2½", 3" and 4"
Stainless steel	Flanged ASME class 150	LEA63	½", ¾", 1", 1½", 2", 2½", 3" and 4"

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

# SPIRA-TROL Two-port Control Valves

## ASME Standard LEA, LFA and LLA 1/2" to 4"

### SPIRA-TROL valve characteristic - options:

<b>LEA</b>	<b>Equal percentage (E)</b> - Suitable for most modulating process control applications providing good control at all flowrates.
<b>LFA</b>	<b>Fast opening (F)</b> - For on/off applications only.
<b>LLA</b>	<b>Linear (L)</b> - Primarily for liquid flow control where the differential pressures across the valve are constant.

**Important note:** Throughout this document, reference has been made to the standard LEA control valve. With the exception of trim type, the LEA, LFA, and LLA control valves are identical.

### SPIRA-TROL valve options:

<b>Stem sealing</b>	<b>PTFE chevron seals</b>	Standard
	<b>Bellows / graphite secondary seals (D)</b>	Zero emissions and high temperature applications
	<b>Graphite packing</b>	High temperature applications
<b>Seating</b>	<b>Metal-to-metal</b>	431 stainless steel - standard 316L stainless steel
	<b>Soft seating</b>	Up to 392°F - PTFE for Class VI shut-off
	<b>Hard facing</b>	316L stainless steel with Stellite 6 facing - for more arduous applications
<b>Bonnet type</b>	Standard bonnet	
	Extended bonnet for large pipe lagging or hot / cold applications	
<b>Trim</b>	Standard trim	
	Low noise and anti-cavitation trim (see TI-S24-59)	

### SPIRA-TROL valves are compatible with the following actuators and positioners:

<b>Electric</b>	EL7200, AEL5 and AEL6 series
<b>Pneumatic</b>	PN1000, PN9000 and PN2000 series
<b>Positioners</b>	PP5 (pneumatic) or EP5 (electropneumatic)
	ISP5 (intrinsically safe electropneumatic)
	SP400 and SP500 (microprocessor based electropneumatic)
	SP300 (digital communications)

Refer to the relevant Technical Information sheet for further details.

### Standards

Designed in accordance with EN 60534. This product fully complies with the requirements of the European Pressure Equipment Directive 97 / 23 / EC and carries the  mark when so required.

### Certification

This product is available with certification to EN 10204 3.1. **Note:** All certification / inspection requirements must be stated at the time of order placement.

### Technical data

### Pressure/temperature limits - LEA31 and LEA33 cast iron valve body

**Note:**  
 When the process fluid temperature is sub-zero and the ambient temperature is below 41°F, the external moving parts of the valve and actuator must be heat traced to maintain normal operation.

- The product **must not** be used in this region.
- PTFE soft seated valves are limited to a maximum operating temperature of 392°F.

Body design conditions	ASME 125	
Maximum design pressure	200 psi g @ 150°F	
Maximum design temperature	450°F @ 125 psi g	
Minimum design temperature	-20°F	
Maximum operating temperature	Standard packing PTFE chevron - Option P or N	450°F
	PTFE soft seat - Option G	392°F
See the SPIRA-TROL selection guide on page 18 for the full list of available options	Graphite packing - Option H	450°F
	Extended bonnet with PTFE chevron - Option E	450°F
	Extended bonnet with graphite packing - Option E	450°F
	Bellows - Option D	450°F
Minimum operating temperature	Note: For lower operating temperatures consult Spirax Sarco	-20°F
Maximum differential pressures	See relevant actuator Technical Information sheet.	
Maximum cold hydraulic test pressure of:		300 psi g

# SPIRA-TROL Two-port Control Valves

## ASME Standard LEA, LFA and LLA ½" to 4"

### Pressure/temperature limits - LEA43 carbon steel valve body

**Flanged  
ASME class 150**

Please note - Bellows sealed valves (Option D) are limited to A - A.

**Note:** When the process fluid temperature is sub-zero and the ambient temperature is below 41°F, the external moving parts of the valve and actuator must be heat traced to maintain normal operation.

- The product **must not** be used in this region.
- High temperature graphite packing is required for use in this region. **Note:** Soft seated valves cannot be used in this region.
- PTFE soft seated valves are limited to a maximum operating temperature of 482°F.

Body design conditions		ASME 150
Maximum design pressure		285 psi g @ 100°F
Maximum design temperature		800°F @ 80 psi g
Minimum design temperature		-20°F
Maximum operating temperature	Standard packing PTFE chevron - Option P or N	482°F
	PTFE soft seat - Option G	392°F
	Graphite packing - Option H	800°F
	Extended bonnet with PTFE chevron - Option E	482°F
	Extended bonnet with graphite packing - Option E	800°F
See the SPIRA-TROL selection guide on page 18 for the full list of available options	Bellows (A - A on the LEA43 chart) - Option D	572°F
	Note: For lower operating temperatures consult Spirax Sarco	-20°F
Maximum differential pressures	See relevant actuator Technical Information sheet.	
Maximum cold hydraulic test pressure of:	428 psi g	

For valve operating above 572°F extended bonnet is recommended for actuator suitability.

# SPIRA-TROL Two-port Control Valves

## ASME Standard LEA, LFA and LLA 1/2" to 4"

### Pressure/temperature limits - LEA63 stainless steel valve body

Flanged  
ASME class 150

**Please note** - Bellows sealed valves (Option **D**) are limited to **A - A**.

**Note:**

When the process fluid temperature is sub-zero and the ambient temperature is below 41°F, the external moving parts of the valve and actuator must be heat traced to maintain normal operation.

- The product **must not** be used in this region.
- High temperature graphite packing is required for use in this region. **Note:** Soft seated valves cannot be used in this region.
- PTFE soft seated valves are limited to a maximum operating temperature of 482°F.

Body design conditions	ASME 150	
Maximum design pressure	275 psi g @ 100°F	
Maximum design temperature	1 000°F @ 20 psi g	
Minimum design temperature	-58°F	
Maximum operating temperature	Standard packing PTFE chevron - Option P or N	482°F
	PTFE soft seat - Option G	392°F
	Graphite packing - Option H	1 000°F
	Extended bonnet with PTFE chevron - Option E	482°F
	Extended bonnet with graphite packing - Option E	1 000°F
See the SPIRA-TROL selection guide on page 18 for the full list of available options	Bellows (A - A on the LEA63 chart) - Option D	572°F
Minimum operating temperature	PTFE packing	-20°F
Note: For lower operating temperatures consult Spirax Sarco	Graphite packing	-58°F
Maximum differential pressures	See relevant actuator Technical Information sheet.	
Maximum cold hydraulic test pressure of:	413 psi g	

For valve operating above 572°F extended bonnet is recommended for actuator suitability.

## SPIRA-TROL Two-port Control Valves ASME Standard KEA, KFA and KLA ½" to 8"

### Description

SPIRA-TROL is a range of two-port single seat globe valves with cage retained seats conforming to ASME standard. These valves are available in three body materials in sizes ranging from ½" to 8". When used in conjunction with a pneumatic or electric linear actuator they provide characterized modulating or on/off control.

### Sizes and pipe connections

Body material	Connections	Type	Size range	
Carbon steel	Threaded NPT	KEA41	½", ¾", 1", 1¼", 1½" and 2"	
	Socket weld	KEA42	½", ¾", 1", 1¼", 1½" and 2"	
	Flanged	ASME 300	KEA43	½", ¾", 1", 1½", 2", 2½", 3" and 4"
		ASME 150 and ASME 300	KEA43	6" to 8"
Stainless steel	Threaded NPT	KEA61	½", ¾", 1", 1¼", 1½" and 2"	
	Socket weld	KEA62	½", ¾", 1", 1¼", 1½" and 2"	
	Flanged	ASME 300	KEA63	½", ¾", 1", 1½", 2", 2½", 3" and 4"
		ASME 150 and ASME 300	KEA63	6" and 8"
SG iron	Flanged ASME 125 and ASME 250	KEA73	1", 1½", 2", 2½", 3", 4", 6" and 8"	

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-S24-71-US 9.14

# SPIRA-TROL Two-port Control Valves

## ASME Standard KEA, KFA and KLA 1/2" to 8"

### SPIRA-TROL valve characteristic - options:

<b>KEA</b>	<b>Equal percentage (E)</b> - Suitable for most modulating process control applications providing good control at all flowrates.
<b>KFA</b>	<b>Fast opening (F)</b> - For on/off applications only.
<b>KLA</b>	<b>Linear (L)</b> - Primarily for liquid flow control where the differential pressures across the valve are constant.

**Important note:** Throughout this document, reference has been made to the standard KE or KEA control valve. With the exception of trim type, the KEA, KFA, and KLA control valves are identical.

### SPIRA-TROL valve options:

<b>Stem sealing</b>	<b>PTFE chevron seals</b>	Standard
	<b>Graphite packing</b>	High temperature applications
	<b>Bellows / PTFE (B)</b>	Zero emissions and thermal fluids
	<b>Bellows / graphite (C)</b>	Zero emissions, high temperature applications and thermal fluids
	<b>Bellows / graphite secondary seals (D)</b>	Zero emissions and high temperature applications
<b>Seating</b>	<b>Metal-to-metal</b>	431 stainless steel - standard 316L stainless steel - 1/2" to 4" only
	<b>Soft seating</b>	Up to 392°F - PTFE for Class VI shut-off
	<b>Hard facing</b>	316L stainless steel with Stellite 6 facing - for more arduous applications
<b>Bonnet type</b>	Standard bonnet	
	Extended bonnet for large pipe lagging or hot / cold applications	
<b>Trim</b>	Standard trim	
	Low noise and anti-cavitation trim (see TI-S24-59)	

### SPIRA-TROL valves are compatible with the following actuators and positioners:

<b>Electric</b>	EL7200, AEL5 and AEL6 series
<b>Pneumatic</b>	PN1000, PN2000, PN9000 and TN2000 series
<b>Positioners</b>	PP5 (pneumatic) or EP5 (electropneumatic)
	ISP5 (intrinsically safe electropneumatic)
	SP400 and SP500 (microprocessor based electropneumatic)
	SP300 (digital communications)

**Note:** Reference the product specific Technical Information sheet for further details.

### Standards

Designed in accordance with EN 60534. This product fully complies with the requirements of the European Pressure Equipment Directive 97 / 23 / EC and carries the CE mark when so required.

### Certification

This product is available with certification to EN 10204 3.1. **Note:** All certification / inspection requirements must be stated at the time of order placement.

# SPIRA-TROL Two-port Control Valves

## ASME Standard KEA, KFA and KLA 1/2" to 8"

### Pressure/temperature limits - KEA41, KEA42 and KEA43 (Carbon steel)

**Notes:**

1. Where the process fluid temperature is sub-zero and the ambient temperature is below 41°F, the external moving parts of the valve and actuator must be heat traced to maintain normal operation.
2. When selecting a valve with a bellows sealed bonnet, the pressure/temperature limits of the bellows must be read in conjunction with the valve pressure/temperature limits shown above.
3. As standard the KEA, KFA, KLA series two-port control valves are supplied with the PTFE stem sealing option.

Body design conditions		ASME 150 and ASME 300
Maximum design pressure	ASME 150 (6" to 8" only)	284 psi g @ 100°F
	ASME 300	740 psi g @ 100°F
Maximum design temperature		800°F
Minimum design temperature		-20°F
Maximum operating temperature	PTFE soft seat (G)	392°F
	Standard packing PTFE chevron	
	Extended bonnet (E) with PTFE chevron	482°F
	Graphite packing (H)	
	Extended bonnet (E) with graphite packing	800°F

Note: We recommend that an extended bonnet (E) with graphite packing is used where valve operation is above 572°F.

### Maximum operating temperature - Bellows only

**Note:** When selecting a valve with a bellows sealed bonnet, the pressure/temperature limits of the bellows must be read in conjunction with the valve pressure/temperature limits shown above.

The product **must not** be used in this region.

**Minimum operating temperature** -20°F

**Note:** For lower operating temperatures consult Spirax Sarco.

**Maximum differential pressures** See relevant actuator Technical Information sheet

**Maximum cold hydraulic test pressure of:**

1 100 psi g

**Warning:** If the valve is fitted with a bellows it must be removed if hydraulic testing is to be done.

# SPIRA-TROL Two-port Control Valves ASME Standard KEA, KFA and KLA 1/2" to 8"

## Pressure/temperature limits - KEA61, KEA62 and KEA63 (Stainless steel)

**Notes:**

- Where the process fluid temperature is sub-zero and the ambient temperature is below +41°F, the external moving parts of the valve and actuator must be heat traced to maintain normal operation.
- When selecting a valve with a bellows sealed bonnet, the pressure/temperature limits of the bellows must be read in conjunction with the valve pressure/temperature limits shown above.
- As standard the KEA, KFA, KLA series two-port control valves are supplied with the PTFE stem sealing option.

Body design conditions	ASME 150 (6" to 8" only)	ASME 300	ASME 150 and ASME 300
Maximum design pressure	ASME 150 (6" to 8" only)	ASME 300	275 psi g @ 100°F 720 psi g @ 100°F
Maximum design temperature			1000°F
Minimum design temperature			-58°F
Maximum operating temperature	PTFE soft seat (G)		392°F
	Standard packing PTFE chevron		
	Extended bonnet (E) with PTFE chevron		482°F
	Graphite packing (H)		
	Extended bonnet (E) with graphite packing		1000°F

Note: We recommend that an extended bonnet (E) with graphite packing is used where valve operation is above 572°F.

### Maximum operating temperature - Bellows only

Note: When selecting a valve with a bellows sealed bonnet, the pressure/temperature limits of the bellows must be read in conjunction with the valve pressure/temperature limits shown above.

Minimum operating temperature	PTFE packing	-20°F
Note: For lower operating temperatures consult Spirax Sarco.	Graphite packing	-58°F

Maximum differential pressures See relevant actuator Technical Information sheet

Maximum cold hydraulic test pressure of: 1087.5 psi g

Warning: If the valve is fitted with a bellows it must be removed if hydraulic testing is to be done.

### Spare parts

#### SPIRA-TROL two-port control valve 1/2" to 4"

The spare parts available are shown in solid outline. Parts drawn in broken line are not supplied as spares.

**Note:** When placing an order for spare parts please specify clearly the full product description as found on the label of the valve body, as this will ensure that the correct spare parts are supplied.

#### Available spares - K series

<b>Actuator clamping nut</b>	<b>A</b>
<b>Gasket set</b> (Non-bellows sealed)	<b>B, G</b>
<b>PTFE chevrons</b>	<b>C</b>
<b>Stem seal kits</b> PTFE to Graphite conversion kit	<b>C1</b>
<b>Graphite packing</b>	<b>C2</b>
<b>* Equal percentage trim</b> (No gaskets supplied)	<b>D, E</b>
<b>Plug stem and seat kit</b> Fast opening trim (No gaskets supplied)	<b>D1, E</b>
<b>Linear trim</b> (No gaskets supplied)	<b>D2, E</b>
<b>PTFE soft seat seal</b>	<b>H</b>

\* Specify if reduced trim.

#### How to order spares

Always order spares by using the description given in the column headed 'Available spares', and state the size and type of valve including the full product description of the product.

**Example:** 1 - PTFE stem seal kit for a Spirax Sarco 1" SPIRA-TROL two-port KEA43 PTSUSS.2 Cvs 12 control valve.

#### How to fit spares

Full fitting instructions are given in the Installation and Maintenance Instructions supplied with the spare.

## STERI-TROL Clean Service 'S' series Two-port and Three-Port Control Valves - DN15 (1/2") to DN100 (4")

### Description

STERI-TROL 'S' series are 316L stainless steel, two-port and three-port control valves. They are designed for mixing/diverting fluids (three-port only), and for on/off and modulating control of clean steam, pure steam and process fluids. The valve is operated by a pneumatic actuator and may be interfaced with a control system using any of the Spirax Sarco range of positioners.

### Available types

<b>SA</b>	Two-port angle pattern design
<b>SH</b>	Two-port horizontal pattern design
<b>SQ</b>	Three-port design

### Valve characteristics - options:

<b>SAE</b> <b>SHE</b>	<b>Equal percentage (E)</b> - Suitable for most modulating process control applications good control providing at low flowrates.
<b>SAL</b> <b>SHL</b> <b>SQL</b>	<b>Linear (L)</b> - Primarily for liquid flow control where the differential pressure across the valve is constant.

**Important note:** Throughout this document, reference has been made to the standard SAE control valve. With the exception of the trim type and porting arrangement, the SAE, SHE, SAL and SHL control valves are virtually identical.

### Approvals and certification

Compliant to ASME BPE 2002, FDA, 3A and USP26 Class VI approved sealing materials. Designed in accordance with 3A's and EHEDG. EN 10204 type 3.1 certificates supplied as standard. Surface finish certificate available on request.

### Valve seating - options:

<b>S</b>	<b>Metal-to-metal (as standard)</b> - Stainless steel
<b>V</b>	<b>Soft seal</b> - White Viton to provide a tight shut-off.

### Valve stem sealing - options:

<b>E</b>	<b>EPDM (as standard)</b> - 3A and FDA approved
<b>V</b>	<b>White Viton</b> - 3A, FDA and USP26 Class VI approved

### The STERI-TROL can be used with the following actuators and positioners:

<b>Electric</b>	AEL5
<b>Pneumatic</b>	PNS3000, PNS4000, PN9000E and PN9000R series
	PP5 (pneumatic) or EP5 (electropneumatic)
<b>Positioners</b>	ISP5 (intrinsically safe electropneumatic) SP300 (digital communications)

Refer to the relevant actuator Technical Information sheet for further details.

### Sizes and end connections

Connections*	Size range
Tube end / butt weld, screwed, flanged and sanitary clamp*	DN15, DN20, DN25, DN32, DN40, DN50, DN65, DN80 and DN100 1/2", 3/4", 1", 1 1/4", 1 1/2", 2", 2 1/2", 3" and 4"

\*Note: Other end connections are available. If you require a pipe end connection which has not been mentioned within this document, please contact Spirax Sarco sales office for further advice and information regarding availability.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

### Technical data

<b>Plug design</b>	DN15 to DN100	Parabolic
<b>Leakage</b>	Metal-to-metal	IEC 534-4 Class IV
	Soft seal	IEC 534-4 Class VI
<b>Rangeability</b>	Equal percentage	50:1
	Linear	30:1
<b>Travel</b>	DN15 to DN50 (1/2" to 2")	3/4"
	DN65 to DN100 (2 1/2" to 4")	1 3/16"
<b>Surface finish</b>	Internal (Mechanical or electro polished)	16 Ra
	External	< 24 Ra

TI-P183-02-US 1.14

## Materials

## PNS3000 series

## PNS4000 series

## PNS3000 and PNS4000 series actuators

No.	Part	Material
1	Diaphragm housing	Stainless steel 304
2	Diaphragm	Reinforced nitrile rubber
3	Diaphragm plate	Pressed steel
4	Springs	Spring steel
5	Spindle	Stainless steel
6	Lock-nut	Stainless steel
7	Spacer	Zinc plated steel
8	'O' ring	Rubber
9	Spring guide	Zinc plated steel
10	Diaphragm clamp	Zinc plated steel
11	Bearing	Bronze
12	'V' ring	Rubber

No.	Part	Material
13	Yoke	Stainless steel 304
14	Gasket	Non asbestos fibre
15	Fixing screwed	Stainless steel
16	Housing bolts and nuts	Stainless steel
17	Top adaptor	Stainless steel
18	Lock-nut	Stainless steel
19	Bottom adaptor	Stainless steel
20	Connectors	Stainless steel
21	Connectors bolts and nuts	Stainless steel
22	Travel indicator	Aluminium
23	Cap (with vent hole)	Nickel plated brass
24	Spacer	Zinc plated steel

**PN 9000 series actuators**

No.	Part	Material	
1	Yoke	SG iron	
2	Upper diaphragm housing	Carbon steel (plated)	
3	Diaphragm plate	Aluminium	
4	Diaphragm	Reinforced NBR	
5	Spring	Spring steel	
6	Spindle	Stainless steel	
7	Washer	Carbon steel (plated)	
8	Spacer	Carbon steel (plated)	
9	'O' ring	Viton	
10	Connector	Carbon steel (plated)	
11	Adaptor	Carbon steel (plated)	
12	Collar	Carbon steel (plated)	
13	Clamp front	Stainless steel	
14	Clamp rear	Stainless steel	
15	Scale	Stainless steel	
16	Vent plug	Brass	
17	Bearing	PTFE /steel composite	
18	Seal	Polyurethane	
19	Pan head screw	Carbon steel (plated)	
20	Nyloc nut	Carbon steel (plated)	
21	Bolt	Carbon steel (plated)	Gr. 8.8
22	Hex. head screw (short)	Carbon steel (plated)	Gr. 8.8
23	Hex. head screw (long)	Carbon steel (plated)	Gr. 8.8
24	Nut	Carbon steel (plated)	Gr. 8.8
25	Lock-nut	Carbon steel (plated)	
26	Socket head screw	Carbon steel (plated)	Gr. 8.8
27	Nut	Carbon steel (plated)	Gr. 8.8
28	Washer	Carbon steel (plated)	
29	Screw	Carbon steel (plated)	Gr. 8.8
30	Gasket	Reinforced graphite	
31	Lower diaphragm housing	Carbon steel (plated)	
32	Lifting eye	Cast steel	

**PN9000**

**SA, SH and SQ control valves**

No.	Part	Material
25	Body	Stainless steel 316L
		Stainless steel 316L
26	Valve plug, stem and soft seal	Stainless steel 316L
		Stainless steel 316L and white Viton or EPDM
27	Bonnet	Stainless steel 316L
28	Body seal	White Viton or EPDM
29	Stem seal	White Viton or EPDM
30	Stem bushes	PTFE-FC
31	Seal washer	White Viton or EPDM
32	Body clamp	Stainless steel 304

**SA 2-port control valve**

**SQ 3-port control valve**

**SH 2-port control valve**

## Pressure / temperature limits

- The product **must not** be used in this region.
- Viton (V) stem seals **must be selected** for use in this region.  
**Note:** the EPDM (E) stem seals are limited to 302°F

<b>Body design conditions</b>	PN16
<b>Maximum design pressure</b>	232 psig @ 248°F
<b>Maximum design temperature</b>	662°F @ 145 psig
<b>Minimum design temperature</b>	-4°F
<b>Maximum operating temperature</b>	EPDM (E) 302°F Viton (V) 338°F
<b>Minimum operating temperature</b>	14°F
<b>Note:</b> For lower operating temperatures consult Spirax Sarco.	
<b>Maximum differential pressure</b>	See following pages
<b>Designed for a maximum cold hydraulic test pressure of:</b>	348 psig

### Cv (Kv) values (SA and SH models)

Flow characteristic	Valve size	Cv (Kvs) by valve size and trim reduction								
		½"(DN15)	¾"(DN20)	1"(DN25)	1¼"(DN32)	1½"(DN40)	2"(DN50)	2½"(DN65)	3"(DN80)	4"(DN100)
	Travel	¾" (20 mm)					1⅜" (30 mm)			
Equal percentage and linear	Standard	4.7 (4)	7.4 (6.3)	12 (10)	19 (16)	29 (25)	42 (36)	74(63)	117 (100)	187 (160)
	Reduction 1	-	4.7 (4)	7.4 (6.3)	12 (10)	19 (16)	29 (25)	42 (36)	74 (63)	117 (100)
	Reduction 2	-	-	4.7 (4)	7.4 (6.3)	12 (10)	19 (16)	29 (25)	42 (36)	74 (63)
	Reduction 3	-	-	-	4.7 (4)	7.4 (6.3)	12 (10)	19 (16)	29 (25)	42 (36)

### Cv (Kv) values (SQ model)

Flow characteristic	Valve size	Cv (Kvs) by valve size and trim reduction								
		½"(DN15)	¾"(DN20)	1"(DN25)	1¼"(DN32)	1½"(DN40)	2"(DN50)	2½"(DN65)	3"(DN80)	4"(DN100)
	Travel	¾" (20 mm)					1⅜" (30 mm)			
Linear	Standard	4.7 (4)	7.4 (6.3)	12 (10)	19 (16)	29 (25)	42 (36)	74(63)	117 (100)	187 (160)

### Micro-flow trim for all valves < = 1" (DN25) (SA and SH only)

Micro-flow trim	Travel	¾" (20 mm)				
	Trim size	⅛"	⅜"	¼"	¼"	⅜"
Linear characteristic	Cv (Kvs)	.47 (0.4)	.74 (0.63)	1.17 (1.0)	1.9 (1.6)	2.9 (2.5)

For conversion:  $K_v = C_v(US) \times 0.855$      $C_v(UK) = C_v(US) \times 0.833$

**Notes:**

- Lower Cv (Kv) values are available to special order.
- Micro-filter and Equal percentage trim not available for the SQ 3-port control valve.

## Maximum differential pressures for Class IV shut-off SA and SH valves

## Maximum differential pressures for Class IV metal seated SQ valves

For pure control applications providing control across the full valve opening range but not guaranteeing shut-off to a greater level than the minimum flowrate based on the valves 30:1 turndown.

<b>Option</b>	Blank = Standard H = Handwheel *	Blank = Standard H = Handwheel *	

\*Not available in stainless steel

### Ordering example:

1 off Spirax Sarco STERI-TROL type 1/2" SAE6SOSV0004 and 1 pneumatic actuator type PNS3320. Having a spring range of 6 to 18 psig.

## Spare parts

The available spares are identified by the part numbers listed below. When placing an order for spare parts, always specify the actuator or the valve model (shown on the data plate) and the name of the part as described below.

### Available spares for the SA, SH and SQ control valves and the PNS3000 and PNS4000 series actuators

	Description	Part number	
<b>Actuator</b>	Stem seal kit ('O' ring and 'V' ring)	8 and 12	
	Diaphragm kit (diaphragm 'O' ring and 'V' ring)	2, 8 and 12	
	Travel indicator	22	
	Spring kit (set of springs, included 3 off longer hex, head bolts and nut on some spring range)	4 and 16	
	Linkage kit (lock-nut, top adaptor connectors, bolts and nuts)	17, 18, 19, 20 and 21	
<b>Valve</b>	Valve stem seal set (excluding bonnet seal)	29, 30 and 31	
	SA, SH and SQ models	Bonnet seal EPDM (packet of 3)	28
		Viton (packet of 3)	28
		Plug and stem (Equal percentage or Linear)	26

### Spare parts ordering example:

1 off Valve stem seal set for a STERI-TROL DN15 SAE6SOSV0004 two-port control valve.

1 off Stem seal kit for a type PNS3320 pneumatic actuator having a spring range 6 to 18 psig.

Actuator and SA valve

SH valve

### Available spares for the PN9000 series actuators

	Description	Part number
	Stem seal kit 'O' ring and 'V' ring	17, 18 and 30
	Diaphragm kit Diaphragm 'O' ring and 'V' ring	4 and 9
<b>Actuator</b>	Travel indicator	15, 19 and 20
	Spring kit Set of springs, included 3 off longer hex, head bolts and nut on some spring range	5
	Linkage kit Lock-nut, top adaptor connectors, bolts and nuts	10, 13, 14, 26 and 27

## TN2000 Series Pneumatic Piston Actuators for 6" and 8" SPIRA-TROL Series Control Valves

### Description

The TN2000 series pneumatic piston actuators are designed for use with 6" and 8" SPIRA-TROL control valves. There are three versions available: Single-acting (with spring), Double-acting (with spring) and Double-acting (no spring) for matching the requirements of valves at various differential pressures and in a variety of applications.

### Available types

<b>SE</b>	= Single-acting, spring-extend
<b>SR</b>	= Single-acting, spring-retract
<b>DE</b>	= Double-acting, spring assisted (extend)
<b>DR</b>	= Double-acting, spring assisted (retract)
<b>DA</b>	= Double-acting, no spring

### Optional extra

Manual handwheel

### Technical data

<b>Temperature range</b>	5°F to 230°F (-15°C to +110°C)
<b>Maximum operating inlet pressure</b>	150 psig (10 bar g)
<b>Air supply connection</b>	3/8" screwed NPT
<b>Actuator travel</b>	2 3/4" (70 mm)

TN2277SE

TN2277SRH

### Dimensions / weights (approximate) inches and pounds

# TN2000 Series Pneumatic Piston Actuators for 6" and 8" SPIRA-TROL Series Control Valves

## Materials

No.	Part	Material
1	Yoke	SG iron
2	Lower cylinder end cap	SG iron BS EN 1563 GJS 400 18U-LT
3	Upper cylinder end cap	SG iron BS EN 1563 GJS 400 18U-LT
4	Cylinder	Composite tube
5	Piston	SG iron
6	Spring	Chrome vanadium steel
7	Spindle	Stainless steel
8	Spindle sleeve	Carbon steel (plated)
9	Lock-nut	M27 Carbon steel (plated)
10	Bearing and seal insert	Carbon steel (plated)
11	Indicator plate	Stainless steel
12	Top connector	Carbon steel (plated)
13	Bottom connector	Carbon steel (plated)
14	Connector	Stainless steel
15	Rod seal wiper	Polyurethane
16	DU plain bearing	PTFE / steel composite
17	Long nut	Carbon steel (plated)
18	Nut and threaded bar	Carbon steel (plated)
19	Threaded bar	M12 Carbon steel (plated)
20	3/8" NPT vent plug (not shown)	LD Polyethylene
21	Cover	PVC
22	Scale	Stainless steel
23	Nut	M12 Carbon steel (plated)
24	Lock-nut	M20 Stainless steel
25	Cap screw	Carbon steel (plated)
26	Bolt	M12 Stainless steel
27	Pan head screw	Carbon steel (plated)
28	Nut	M2.5 Carbon steel (plated)
29	'O' ring	Fluorocarbon rubber (Viton)
30	'O' ring	Fluorocarbon rubber (Viton)
31	'O' ring	Fluorocarbon rubber (Viton)
32	Spring washer	M12 Carbon steel (plated)
33	Spring washer	M10 Carbon steel (plated)

# TN2000 Series Pneumatic Piston Actuators for 6" and 8" SPIRA-TROL Series Control Valves

## How to use the sizing data:

The following tables supply guidance as to the sizing of the TN2000 when it is used on the SPIRA-TROL K and L series control valves.

### To select a suitable actuator:

- Identify the column containing the valve and gland material selected.
- Identify the maximum operating pressure condition, including any transient pressures likely to occur, within the selected column.
- Read back to the left hand side of the table to identify the suitable actuator for the application.

For conditions outside of those illustrated please contact Spirax Sarco.

**NOTE:** DE, DR and DA actuators require a double acting positioner. SE and SR actuators require a single acting positioner.

## Unbalanced flow under applications

**Caution 1:** Maximum operating air pressure onto the actuator must not exceed 150 psig.

**Caution 2:** DE and DR versions must not exceed 120 psig.

## Maximum differential pressures for Class IV shut-off Unbalanced valves

## Unbalanced flow over applications

Recommended for On-Off Applications ONLY

Caution 1: Maximum operating air pressure onto the actuator must not exceed 150 psig.

Caution 2: DE and DR versions must not exceed 120 psig.

----	---	---	---	---	----	--

#### How to order

Example: 1 off Spirax Sarco TN2277SE pneumatic piston actuator.

# TN2000 Series Pneumatic Piston Actuators for 6" and 8" SPIRA-TROL Series Control Valves

## TN2000 series selection guide:

### Spare parts

The spare parts available are common across the range of actuators detailed in this document. No other parts are available as spares.

#### Available spares

'O' ring kit	15, 29, 30, 31
Travel indicator kit	22, 27, 28
Spring	6
Handwheel	A
EH kit	B
RH kit	C

### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the actuator model.

**Example:** 1 - 'O' ring kit for a Spirax Sarco TN2277SE pneumatic piston actuator.

## PN9000 Series Pneumatic Actuators for SPIRA-TROL K and L Series Control Valves

### Description

The PN9000 series actuators are a compact range of linear actuators that are available in 3 diaphragm sizes for matching the requirements of valves at various differential pressures.

Each actuator is fitted with a mechanical travel indicator and incorporates a fully-rolling diaphragm, which provides good linearity over the operating stroke.

<b>Available types</b>	<b>PN</b> = Standard	<b>Suffix E</b> = Spring-extend
	<b>PNP</b> = Electroless nickel plated	<b>Suffix R</b> = Spring-retract
<b>Optional extra</b>	<b>Manual handwheel</b>	<b>Suffix H</b>
	<b>Stainless steel bolting</b>	<b>Suffix S</b>

**Important note:** Throughout this document, reference has been made to the PN actuator.

### Technical data

<b>Temperature range</b>	- 4°F to 230°F (- 20°C to +110°C)

29	Screw	Carbon steel (plated)	Gr. 8.8
30	Gasket	Reinforced graphite	
31	Lower diaphragm housing	PN9000	Carbon steel (plated)
		PNP9000	Stainless steel
		PN9000S	Stainless steel 316L
32	Lifting eye	PN9000	Cast steel
		PNP9000	Cast steel
		PN9000S	Stainless steel 316L

# PN9000 Series Pneumatic Actuators for SPIRA-TROL K and L Series Control Valves

## Spare parts

The only spares available are clearly indicated below and are common for both spring-extend and spring-retract versions.

### Available spares

Stem seal kit	17, 18, 30
Diaphragm kit	4, 9
Travel indicator kit	15, 19, 20
Spring kit	5
Linkage kit (suitable for Mk1 and SPIRA-TROL valves)	10, 13, 14, 26, 27

## How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the actuator model.

**Example:** 1 - Stem seal kit for a PN9120 pneumatic actuator.

# PN9000 Series Pneumatic Actuators for SPIRA-TROL K and L Series Control Valves

## How to use the sizing data:

The following tables supply guidance as to the sizing of the PN9000 when it is used on the SPIRA-TROL K and L series valves.

Two conditions are illustrated in tabular form:

**Class IV shut-off** - Providing shut-off of the valve to the requirements of BS 5793-4 (IEC 60534-4) class IV.

**Class VI shut-off** - Providing shut-off of the valve to the requirements of BS 5793-4 (IEC 60534-4) class VI.

To select a suitable actuator:

- Identify the column containing the valve and gland material selected.
- Identify the maximum operating pressure condition, including any transient pressures likely to occur, within the selected column.
- Read back to the left hand side of the table to identify the suitable actuator for the application.

For conditions outside of those illustrated please contact Spirax Sarco.

# PN9000 Series Pneumatic Actuators for SPIRA-TROL K and L Series Control Valves

## PN9000 series selection guide:

Type	PN = Polyester powder coated (standard) PNP = Electroless nickle plated	<input type="text" value="PNP"/>
Series	9 = 9000 series	<input type="text" value="9"/>
Actuator size	1 = 100 cm <sup>2</sup> 2 = 340 cm <sup>2</sup> 3 = 670 cm <sup>2</sup>	<input type="text" value="3"/>
Valve travel	2 = 20 mm 3 = 30 mm	<input type="text" value="3"/>
Spring rating	0 = 0.2 to 1.0 bar (option for 0.4 to 1.2 bar) 3 = 2.0 to 4.0 bar 5 = 0.4 to 2.0 bar (PN9100 series only) 6 = 1.0 to 2.0 bar 7 = 2.5 to 3.5 bar (PN933_ series only)	<input type="text" value="7"/>
Spring action	E = Spring-extend R = Spring-retract	<input type="text" value="E"/>
Manual override	H = Handwheel (optional)	<input type="text"/>
Stainless steel bolting	S = Stainless steel bolting (optional)	<input type="text"/>

## How to order / selection example:

1 off Spirax Sarco PNP9337E pneumatic actuator.

## PN1000 Series Spring Extend Pneumatic Actuators (for 6" and 8" Spira-Trol Valves)

### Description

A range of single spring linear actuators having 2 diaphragm sizes for matching the requirements of different valves at various differential pressures. Each actuator is fitted with a combined mechanical stroke indicator and anti-rotation guard. The actuators are designed for easy conversion from spring extend to spring retract, and vice versa, without the need for special tools.

### Available types

Spring extend spindle actuators:  
PN1600

### Technical data

Temperature range	-20°C to +110°C (-4°F to +230°F)
Maximum operating pressure	4.5 bar (65 psi)
Air supply connection	1/4" NPT

### Materials

No.	Part	Material
1	Diaphragm housing	Carbon steel
2	Diaphragm	Reinforced nitrile rubber
3	Diaphragm plate	Stainless steel
4	Spring	Spring steel
5	Spindle guide	Bronze
6	Bearing	Hardened steel
7	Yoke	Cast steel
8	Housing securing nuts and bolts	Zinc plated steel
9	Spindle	Stainless steel
10	Connector	Zinc plated steel
11	Travel indicator	Stainless steel
12	Lock plate	Zinc plated steel
13	'O' ring	Nitrile rubber
14	Lock-nut	Zinc plated steel
15	Cap with vent hole	Nickel plated brass
16	Spring location washer	Zinc plated steel
17	Valve spindle adapter	Stainless steel

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-P320-56-US 08.11

# PN1000 Series Spring Extend Pneumatic Actuators (for 6" and 8" Spira-Trol Valves)

## Differential pressures for KE and KEA series valves and PN1000 series actuators

Note: The differential pressures stated in the tables below are limited by the maximum operating pressures of the selected control valve.

Differential Pressures for PN1000 actuator - Unbalanced Flow Under - Class 4 - Spring Extend

Actuator	Actuator		Max air pressure	Maximum Differential Pressure (psi)			
	Closed	Open		6"		8"	
				PTFE	Graph	PTFE	Graph
PN1670	6	18	60				
PN1676	15	30	60				
PN1673	30	60	60	83	79	32	30

Differential Pressures for PN1000 actuator - Unbalanced Flow Over - Class 4 - Spring Extend

Actuator	Actuator		Max air pressure	Maximum Differential Pressure (psi)			
	Closed	Open		6"		8"	
				PTFE	Graph	PTFE	Graph
PN1670	6	18	65	329	333	184	187
PN1676	15	30	65	281	285	158	160
PN1673	30	60	65	202	206	113	115

Differential Pressures for PN1000 actuator - Balanced - Class 4 - Spring Extend

Actuator	Actuator		Max air pressure	Maximum Differential Pressure (psi)			
	Closed	Open		6"		8"	
				PTFE	Graph	PTFE	Graph
PN1670	6	18	65				
PN1676	15	30	65				
PN1673	30	60	65	740	740	740	740

Differential Pressures for PN1000 actuator - Unbalanced Flow Under - Class 6 - Spring Extend

Actuator	Actuator		Max air pressure	Maximum Differential Pressure (psi)			
	Closed	Open		6"		8"	
				PTFE	Graph	PTFE	Graph
PN1670	6	18	60	28	24	43	13

# PN1000 Series Spring Extend Pneumatic Actuators (for 6" and 8" Spira-Trol Valves)

## Installation

Actuators should be mounted on the valve with the stem in a vertical position. Installation and Maintenance Instructions are supplied with the product.

## Spare parts

Information regarding available spare parts is given on TI-P357-23-US.

## PN1000 series actuator selection table

Selection should be made in conjunction with the differential pressure chart shown above and the following code:

Actuation	PN	= Pneumatic	<input type="text" value="PN"/>
Actuator action	1	= Spring to extend	<input type="text" value="1"/>
Diaphragm size	6		<input type="text" value="6"/>
Actuator travel	7	= 70 mm	<input type="text" value="7"/>
Spring range	0	= 0.4 to 1.2 bar (6 to 18 psi)	<input type="text" value="3"/>
	3	= 2.0 to 4.0 bar (30 to 60 psi)	
	6	= 1.0 to 2.0 bar (15 to 30 psi)	
Yoke type	B	= Type B for valve sizes: DN150 - 200 (6" to 8")	<input type="text" value="B"/>

## How to order

**Example:** 1 off Spirax Sarco PN1553B actuator, set to 30 to 60 psig.

## Dimensions/weights approximate in mm (inches) and kg (pounds)

Actuator	Actuator diaphragm			D	E	Weight
	A	B	C			
PN1600	465 (18-5/16")	515 (20-1/4")	150 (6")	247 (9-3/4")	250 (9-7/8")	70 (154)

## Belimo AFB Series Electric Actuators for

### 1/2" to 2" B Series and SPIRA-TROL L & K Series Control Valves

#### Description

The Belimo AF Series actuators are suitable for either two position or modulating control. These actuators can be used with B Series or SPIRA-TROL L and K Series control valves.

#### Multi-Function Technology (MFT)

An integrated microprocessor allows for a variety of parameters, including control signal type, to be configured in the factory or the field with a PC and Belimo software.

#### Manual Operation

A 5mm Allen wrench can be used to manually operate the actuator. Turning the wrench clockwise will extend the spindle. Spindle position will be retained until power is applied to the actuator.

#### Overload Protection

The actuator is protected against short circuiting and reverse polarity. The spindle stroke is adapted automatically and is overload protected.

#### Operational Display

The stroke is physically shown by a travel indicator on the actuator yoke.

#### Available Types

Actuator Model	Valve action in event of power failure	
	B Series	SPIRA-TROL
AFB24-MFT-US	Optional*	Optional*
2 x AFB24-MFT-US	Optional*	Optional*

\*Power failure action should be specified at the time of order and will determine the actuator to yoke mounting orientation.

#### Materials of Construction

No.	Component	Material
1	Yoke	Steel
2	Base	Aluminum die casting
3	Cover	Steel

#### Ambient Limits

Storage temperature -40°F to 176°F (-40°C to 80°C) at 5 to 95% RH

Ambient temperature -22°F to 122°F (-30°C to 50°C) at 5 to 95% RH

Maximum valve media temperature 338°F (170°C)\*

\* Equivalent to a saturated steam pressure of 100psig (6.9barg)

#### Agency Listings

General cULus acc. to UL60730-1A/-2-14, CAN/CSA E60730-1:02, CE acc. to 2004/108/EC & 2006/95/EC

Housing NEMA 2, IP54, Enclosure Type 2

#### Spares

No spare parts are available for this actuator range

#### Dimensions and Weights

Weight	AFB24-MFT-US	12.8 lb
	2x AFB24-MFT-US	20.6 lb
Dimensions	See below	

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

#### Specifications

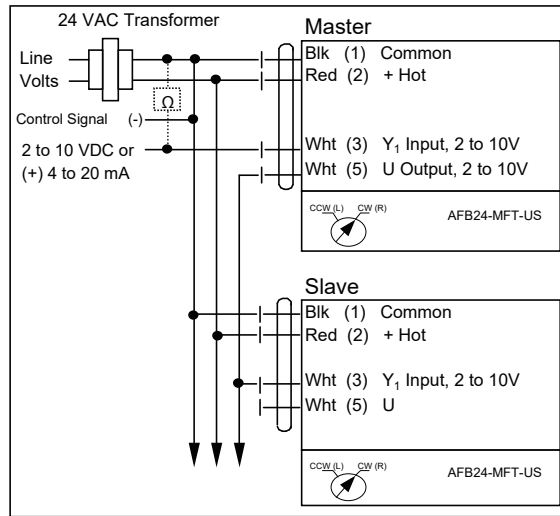

Supply Voltage	24 VAC 50/60 Hz or 24 VDC
Transformer Sizing	10 VA (Class 2 power supply)
Power Consumption	7.5W running, 3W holding
Electrical Connection	3 ft., 18 GA appliance cable, 1/2" conduit fitting
Running Time Motor	70 - 220 sec
Running Time Spring	<20 sec
Overload Protection	Electronic throughout stroke
Control Signal (to be specified at time of order)	2 to 10 VDC, 0.5mA max 4 to 20 mA w/ 500Ω resistor Pulse Width Modulation (pulse width to be specified by customer) Floating Point On/Off
Input Impedance	100KΩ for 2 to 10VDC, 500Ω for 4 to 20 mA, 1500Ω for Pulse Width Modulation (PWM)
Feedback	2 to 10 VDC, 0.5mA max
Maximum Stroke	3/4" (20mm)
Spindle Force	AFB24-MFT US 230lbf (1023N) 2 x AFB24-MFT US 343lbf (1525N)
Position Indication	Visual indicator
Manual Override	3/16 Allen (supplied) 5mm hex

TI-1-519-US 8.13

## Installation and Wiring

The valves should be installed in the horizontal line. Allow 6" for the cover removal and 12" for complete actuator removal. These actuators should never be mounted underneath the valve as condensation can build up and result in a failure of the actuator. Full instructions are supplied with the product. The diagram below shows the wiring schematic. For AFB-MFT-US actuators, connect as shown in the 'Master' schematic. For 2 x AFB-MFT-US actuators, one actuator motor should be connected as a 'Master' and the other as a 'Slave' unit, as shown in the schematic.

**Note:** Please contact Belimo for other wiring information.

## Differential Pressures (psi)

**Note:** Due to temperature capability limitations, maximum saturated steam inlet pressure is 100 psig. For reduced capacity valves, use the differential pressures for the next valve size down.

### B Series 2-Way and 3-Way Control Valves

## AEL5 Series Electric Linear Actuators for 1/2" to 4" Control Valves

### Description

The AEL5 series electric actuators are reversible having linear output.

### Available types

AEL5 actuators are available with 4 supply variants, **230 Vac (2-wire, single phase)**, **115 Vac**, **24 Vac** and **24 Vdc** all being suitable for a VMD (Valve Motor Drive) input power signal. At extra cost, actuators can be fitted with a positioner input card that can accept a 4 - 20 mA or 2 - 10 Vdc control signal - Please note that this option is not available for the 24 Vdc supply variant.

AEL5 actuators can be ordered with or without a potentiometer, those ordered with will be fitted with a 1 kΩ potentiometer as standard.

The potentiometer can be used in conjunction with the positioner for a 2 - 10 V or 4 - 20 mA input signal, or as feedback for VMD. Also available are auxiliary limit switches and anti-condense heater. See TI-P358-28 for further details on the accessories.

**These actuators can be used with the following valves**, in conjunction with an appropriate valve adaptor and mounting flange.

Valves	2-port	SPIRA-TROL or C Series
	3-port	QL33, QL43, QL63 and QL73 mixing and diverting valves

**Note:** A mounting flange and valve adaptor is required to mount the actuator to a valve. See the associated tables below:

### Mounting flange selection

Valve type and size	Actuator	
	AEL51_ AEL52_ AEL53_ AEL54_ AEL55_	AEL56_
<b>L, K, and Q Series</b> 1/2" to 2"	EL5970	
<b>L Series</b> 2 1/2" to 4"	EL5971	
<b>K and Q Series</b> 2 1/2" to 4"	EL5971	EL5972

### Valve adaptor selection

Actuator speed mm/s Note: Speed is relative to 50/60 Hz/ (continuous) respectively	0.25 / 0.3 / (1)	0.5 / 0.6 / (0.5)	0.5 / 0.6 / (1)	0.65 / 0.78 / (0.5)	0.45 / 0.54 / (0.5)	1 / 1.2 / (1)
Enclosure rating	IP65 (for outdoor installations provide adequate shelter)					
Actuator thrust lbf (kN)	225 (1kN)	450 (2kN)	1,011 (4.5kN)	1,798 (8kN)	3,147 (14kN)	5,620 (25kN)
Ambient limits	-4°F to 140°F (Caution: -4°F to 122°F with positioner card fitted)					
Motor	Synchronous motor for 225 lbf to 3147 lbf Asynchronous motor for 5620 lbf (Alternative current) or Brushed direct current motor (Direct current)					
Terminations	1.5 mm <sup>2</sup>					
Manual override	Handwheel					
Conduit entries	2 x M20 x 1.5 (for 225 to 3147 lbf) and 3 x M20 x 1.5 (for 5620 lbf)					
Positioner power consumption VA	1					

For alternative speed versions please contact Spirax Sarco

#### Approvals

This equipment is CE marked and conforms to the following:

- EN 50081-1 and EN 50082-2 (EMC)
- EN 61010-1/A2 (Safety), following the provisions of directives 89/336/EEC amended by 92/31/EEC and 93/68/EEC (EMC) and 72/73/EEC amended by 93/68/EEC (LVD).

## Electric Linear Actuators

### for 1/2" to 4" Control Valves

#### Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P358-26) supplied with the product.

#### Installation and wiring note:

The valve should be installed in the horizontal line. The position of the actuator will depend on the type of valve to which it is fitted and the temperature of the media. However, it is not recommended that the actuators be fitted directly below the valve or in a wet environment.

#### Disposal

This product is recyclable. No ecological hazard is anticipated with the disposal of this product, providing due care is taken.

#### Selection example

Control valve	3/4" LEA43 PTSUSS.2 Cv 7.5 Flanged ANSI 150
Maximum ΔP	290 psi
Electrical supply	230 Vac
Control signal	4 - 20 mA
Actuator selected	AEL51211
Positioner required	AEL5961 (Potentiometer must also be selected)
Valve adaptor	AEL6911
Mounting flange	EL5970

#### How to order

<b>Product</b>	<b>A</b> = Actuator	<b>A</b>
<b>Type</b>	<b>E</b> = Electric	<b>E</b>
<b>Movement</b>	<b>L</b> = Linear	<b>L</b>
<b>Series</b>	<b>5</b>	<b>5</b>
<b>Thrust lbf (kN)</b>	<b>1</b> = 225 lbf (1kN)	<b>1</b>
	<b>2</b> = 450 lbf (2kN)	
	<b>3</b> = 1,011 lbf (4kN)	
	<b>4</b> = 1,798 lbf (8kN)	
	<b>5</b> = 3,147 lbf (14kN)	
	<b>6</b> = 5,620 lbf (25kN)	
<b>Stroke in (mm)</b>	<b>2</b> = 1" (50mm) (AEL51_, AEL52_, AEL53_ and AEL54_ series only)	<b>2</b>
	<b>3</b> = 2 1/2" (65mm) (AEL55_ series only)	
	<b>4</b> = 4" (100mm) (AEL56_ series only)	
<b>Maximum speed (mm/s)</b>	<b>1</b> = 0 - 0.4 in/sec	<b>1</b>
	<b>1</b> = 230 Vac (2-wire, single phase)	
<b>Supply voltage</b>	<b>2</b> = 115 Vac	<b>1</b>
	<b>3</b> = 24 Vac	
	<b>4</b> = 24 Vdc (not available for AEL56_)	
	<b>F</b> = Integral 24 V VMD (only for actuators with 24 V supply voltage)	
<b>Control signal*</b>	<b>G</b> = Integral 115 V VMD (only for actuators with 115 V supply voltage)	<b>J</b>
	<b>J</b> = Integral 230 V VMD (only for actuators with 230 V supply voltage)	
	<b>X</b> = No mechanical/electrical fail safe device	
<b>Failure mode</b>	<b>X</b> = No mechanical/electrical fail safe device	<b>X</b>
<b>Potentiometer</b>	<b>A</b> = With 1 kΩ potentiometer	<b>A</b>
	<b>S</b> = Without	

\* For 0/2 - 10 Vdc and 0/4 - 20 mA modulating control signal the appropriate positioner card must be ordered at time of order. Potentiometer "A" option must also be selected. See TI-P358-28-US

#### How to order example

1 each Spirax Sarco AEL51211JXA electric linear actuator for use with a 4" SPIRA-TROL two-port KEA43 control valve.

# spirax sarco

## Accessories for the AEL5 Series of Electric Linear Actuators

### Available types and technical data

<b>AEL5961</b>	230 Vac positioner card	Power consumption 1 VA
<b>AEL5962</b>	115 Vac positioner card	Power consumption 1 VA
<b>AEL5963</b>	24Vac posit ioner card (except for AEL54213 _ , AEL55313 _ and AEL56413 _)	Power consumption 1 VA
<b>AEL5964</b>	24 Vac positioner card (for AEL54213 _ , AEL55313 _ and AEL56413 _ actuators only)	Power consumption 1 VA
<b>AEL5951</b>	2 auxiliary limit switches (Electronic card)	5 A - 230 Vac - including cams, mounting kit and PCB
<b>AEL5952</b>	Auxiliary feedback potentiometer	1000 ohms $\frac{3}{4}$ " to $1\frac{3}{16}$ " stroke, including mounting kit and pinion
<b>AEL5952.1</b>	Tandem feedback potentiometer	2 x 1000 ohms $\frac{3}{4}$ " to $1\frac{3}{16}$ " stroke, including mounting kit and pinion
<b>AEL5952.2</b>	Tandem feedback potentiometer	2 x 1000 ohms 1" maximum stroke, including mounting kit and pinion
<b>AEL5952.3</b>	Auxiliary feedback potentiometer	2000 ohms $\frac{3}{4}$ " to $1\frac{3}{16}$ " stroke, including mounting kit and pinion
<b>AEL5952.4</b>	Tandem feedback potentiometer	2 x 2000 ohms $\frac{3}{4}$ " to $1\frac{3}{16}$ " stroke, including mounting kit and pinion
<b>AEL5952.5</b>	Auxiliary feedback potentiometer	500 ohms $\frac{3}{4}$ " to $1\frac{3}{16}$ " stroke, including mounting kit and pinion
<b>AEL5953</b>	Tandem feedback potentiometer	2 x 1000 ohms $\frac{3}{4}$ " to $1\frac{3}{16}$ " and $1\frac{3}{16}$ " to 1" stroke, including mounting kit and pinion
<b>AEL5954</b>	115 - 230 V anti-condensate heater	
<b>AEL5956</b>	24 V anti-condensate heater	
<b>AEL5981</b>	Position transmitter	2 wire 4 - 20 mA
<b>AEL5982</b>	Position transmitter	3 wire 0 / 4 - 20 mA

The potentiometer must use its whole range (almost 1 full turn). To facilitate different actuator strokes replacement pinion kits are available. Please contact Spirax Sarco for further information.

<b>Special parts</b>	Pinion 25 teeth with AEL5_	For stroke $\leq \frac{3}{4}$ "
	Pinion 30 teeth with AEL5_	For stroke between $\frac{3}{4}$ " to $1\frac{3}{16}$ "
	Pinion 50 teeth with AEL5_	For stroke between $1\frac{3}{16}$ " to 1"
	Pinion 65 teeth with AEL5_	For stroke between 1" to $2\frac{1}{2}$ "
	Pinion 75 teeth with AEL5_	For stroke between $2\frac{1}{2}$ " to $2\frac{3}{4}$ "

For information on AEL5 series actuators see TI-P358-25

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

## AEL6 Series Smart Electric Actuators for ½" to 4" Control Valves

### Materials

No.	Part		Material
1	Case	517 lbf to 1798 lbf	Polycarbonate
		3147 lbf to 5620 lbf	Die-cast aluminium
2	Housing		Die-cast aluminium
3	Guidance		Red brass

### Description

The AEL6 series electric actuators are reversible having linear output.

### Available types

The actuators are available with 4 supply variants: 230 Vac (2-wire, single phase), 115 Vac, 24 Vac and 24 Vdc. The standard version is available for VMD

(Valve Motor Drive), 0 / 4 - 20 mA or 0 / 2 - 10 Vdc input control signals. These actuators can be used with the following valves, in conjunction with an appropriate valve adaptor and mounting flange:

Control valves	2-port SPIRA-TROL
	3-port QL43 and QL73 mixing and diverting valves

**Note:** A mounting flange and valve adaptor is required to mount the actuator to a valve. See the associated tables below:

### Mounting flange selection

Valve type and size		Actuator	
		AEL62_, AEL63_, AEL64_, AEL65_	AEL66_
L, K, and Q Series	½" to 2"	EL5970	
L Series	2 ½" to 4"	EL5971	
K Series	2 ½" to 4"	EL5971	EL5972

### Valve adaptor selection

Valve type and size		Valve stem	AEL62_	AEL63_	AEL64_	AEL65_	AEL66_
L, K, and Q Series	½" to 2"	M8 thread	AEL6911	AEL6911	AEL6911	AEL6911	
	2 ½" to 4"	M12 thread	Integrated	Integrated	Integrated	Integrated	EL5945

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

# AEL6 Series Smart Electric Actuators for 1/2" to 4" Control Valves

## Technical data

Actuator type	AEL6221_	AEL6321_	AEL6323_	AEL6421_	AEL6422_	AEL6532_	AEL6631_
Supply voltage	230 Vac (2-wire, single phase), 115 Vac, 24 Vac, 24 Vdc						
Supply frequency	50 Hz / 60 Hz / continuous						
Maximal power consumption VA Note: power consumption is relative to 50 / 60 Hz / continuous respectively	13	19	57	25	72	65	88
Stroke (mm) inches	2 (50)	2 (50)	2 (50)	2 (50)	2 (50)	2½ (65)	2⅓ (60 *)
Actuator speed mm/s Note: Speed is relative to 50 / 60 Hz / continuous respectively	0.9	0.9	4.5	0.7	1.7	1.3	0.4
Enclosure rating	IP65 (for outdoor installations, provide adequate shelter)						
Actuator thrust (kN) lbf	517 (2.3)	1,012 (4.5)	1,012 (4.5)	1,798 (8)	1,798 (8)	3,147 (14)	5,620 (25)
Ambient limits	-4°F to 140°F (-20°C to 60°C)						
Analog position set valve input	Adjustable: 0 / 4 - 20 mA or 0 / 2 - 10 Vdc						
Positioner function	Dead-band adjustable between 0.5 - 5% of set value range, maximum resolution 0.1 mA or 0.05 V at 2" (50 mm) stroke						
Active valve position feedback	Adjustable: 0 / 4 - 20 mA or 0 / 2 - 10 Vdc						
Automatic commissioning	Drives to torque dependant stop(s) and moves through the whole valve travel. Autoscale of set value and feedback in accordance to valve travel						
Characteristic curve correction	Up to 16 interpolation points, input inaccuracy 1%						
Torque increase	Adjustable up to 150% torque for up to 2.5s to break away a valve in the end position						
Status indication	2 LEDs under actuator cover						
Internal fault monitoring	Torque, position set value, active value, position, temperature of electronic board						
Diagnostics function	Stores cumulated operation data (motor and total running time, number of motor starts) and data sets of current values (set value, feedback value, torque, temperature)						

### \*Notes:

- 115 Vac and 230 Vac models of the AEL6631\_ have a stroke limited to 2⅓ (60 mm).
- 24 Vac and 24 Vdc models of the AEL6631\_ are capable of up to 4" (100 mm) stroke.

### Optional extras:

- Additional position switches - AEL6951 (NC) and AEL6952 (NO)
- Local control - (non retrofitable for the AEL66\_) - AEL6955 (2.3 to 14 kN) and AEL6956 (25 kN)
- Fault indicator relay - AEL6973
- Communication software including data cable - AEL6957
- Space heater - AEL6953 (24 Vac) and AEL6954 (115 Vac and 230 Vac)

### Approvals

This equipment is CE marked and conforms to the following:

- EEC regulation 89 / 336 - EEC for Electromagnetical compatibility and 72 / 23 - EEC for low voltage directive.
- EN 61000 - 2 - 2 / 2001 and EN 61000 - 6 - 4 for EMC, and 61010 - 1 / 1995 for safety.

### How to use the sizing data:

The following tables supply guidance as to the sizing of the AEL6 series actuator when it is used on the SPIRA-TROL K and L series valves.

#### Three conditions are illustrated in tabular form:

- L and K Series** - 2-port valve: Class IV shut-off - Providing shut-off of the valve to the requirements of ANSI/FCI 70-2 class IV.
- L and K Series** - 2-port valve: Class VI shut-off - Providing shut-off of the valve to the requirements of ANSI/FCI 70-2 class VI.
- QL** - 3-port valve: Class IV shut-off - Providing shut-off of the valve to the requirements of ANSI/FCI 70-2 class IV.

#### To select a suitable actuator:

- Identify the column containing the valve size and gland material selected.
- Identify the maximum operating pressure condition, including any transient pressures likely to occur, within the selected column.
- Read back to the left hand side of the table to identify the suitable actuator for the application.

For conditions outside of those illustrated please contact Spirax Sarco.

# AEL6 Series

## Smart Electric Actuators

### for ½" to 4" Control Valves

#### Dimensions / weights (approximately) in inches and pounds

Model	A	B	C	Weight
AEL6221-	18	7	5.9	15.4
AEL6231-	18	7	5.9	15.4
AEL6323-	18	7	5.9	15.4
AEL6421-	19.3	7	5.9	22.0
AEL6422-	19.3	7	5.9	22.0
AEL6532-	21.9	7.1	6.8	26.4
AEL6631-	29.9	8.9	10.9	44.0

#### Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions that are supplied with the product.

#### Installation and wiring note:

The valve should be installed in a horizontal pipeline. The position of the actuator will depend on the type of valve to which it is fitted and the temperature of the media. However, it is not recommended that the actuators be fitted at more than 90° from the vertical position or in a wet environment.

# AEL6 Series Smart Electric Actuators for 1/2" to 4" Control Valves

## AEL6 series actuators - Product nomenclature and selection example:

Product	A = Actuator	A
Type	E = Electric	E
Movement	L = Linear	L
Series	6	6
Thrust lbf (kN)	2 = 517 (2.3) 3 = 1,102 (4.5) 4 = 1,798 (8) 5 = 3,147 (14) 6 = 5,620 (25)	2
Stroke in (mm)	2 = 2 (50) 3 = 2 <sup>1</sup> / <sub>3</sub> - 2 <sup>3</sup> / <sub>4</sub> (60 - 70) (AEL65_ and AEL66_ series only)	2
Maximum speed (mm / s)	1 = 0 - 1.0 (AEL62_, AEL63_, AEL64 and AEL66_ series only) 2 = 1.1 - 2.0 (AEL64_ and AEL65_ series only) 3 = 2.1 - 4.5 (AEL63_ series only)	1
Supply voltage	1 = 230 Vac (2-wire, single phase) 2 = 115 Vac 3 = 24 Vac and 24 Vdc	1
Control signal	F = 24 V VMD, 0 / 2 - 10 Vdc and 0 / 4 - 20 mA (supply voltage 3 only) G = 115 V VMD, 0 / 2 - 10 Vdc and 0 / 4 - 20 mA (supply voltage 2 only) H = 24 V VMD, 0 / 2 - 10 Vdc and 0 / 4 - 20 mA (supply voltage 2 only) J = 230 V VMD, 0 / 2 - 10 Vdc and 0 / 4 - 20 mA (supply voltage 1 only) K = 24 V VMD, 0 / 2 - 10 Vdc and 0 / 4 - 20 mA (supply voltage 1 only)	J
Failure mode	X = No mechanical / electrical fail safe device S = Super capacitor fail safe (Standard, SSI Offering)	S

### How to order / selection example:

**Example :** A 115 Vac fail safe electric actuator to suit a 1" control valve with PTFE stem seals, to have class IV shut-off against a 150 psi differential pressure. There is no requirement for high actuating speed, the control signal is 4-20mA.

#### Selection:

1 off Spirax Sarco AEL6221-2PS electric actuator.

## Rotork CVL Electric Actuators For SPIRA-TROL Control Valves

### Description

The Rotork CVL range of electric actuators offers a highly accurate and responsive method of automating our SPIRA-TROL and C Series control valves. They can interface with a number of control signals and communication protocols and are suitable for use in most industrial environments with available hazardous areas enclosures. They are full duty rated capable of continuous, un-restricted modulation. Super-capacitors provide power to drive the valve to a safe position in the event of a loss of the power supply. Set-up is achieved through an auto-calibration routine with further configuration completed via software through a Bluetooth® link.

### Features

**Fast travel speed** – the actuator can open or close a valve between 3 seconds for ¾" travel valve and 20 seconds for a 2" travel valve.

**Multiple control signal options** - the standard actuator operates on a 4-20mA signal and provides 4-20mA position feedback (an auxiliary 24V d/c supply is required to drive this loop). Options are available to allow interfacing with HART®, Profibus or Foundation Fieldbus network control.

**Status indication relay** – a user configurable relay is available for status and availability indication. This can be configured to indicate a number of parameters.

**Valve diagnostics** – a data-logger is provided which helps detect potential valve problems before they occur. It stores operational data relating to the valve position and load which can be monitored over time.

**Dual Sensor™ technology** – two independent position sensors minimize backlash and positional errors.

**Brushless DC motor** – highly reliable, maintenance free and provides full, continuous, unrestricted modulation duty (S9).

**Double sealing** – provides ingress protection to IP68.

**Power supply flexibility** – Incorporated within each AC actuator is a switch mode power supply, which can accept a range of input voltages from 100-240 VAC 50/60 Hz. An optional 24 VDC supply can be catered for.

**Reserve power** - For fail-to-position action on loss of supply, the actuator can be fitted with an optional reserve power-pack, which consists of 'super capacitors'. The reserve power-pack will allow the actuator to move to a predetermined position on power failure.

**Drive-train** – simple yet durable spur gear drive, lubricated for life with proven durability.

**Anti Back Drive Mechanism** – the actuator is capable of resisting any back drive from the valve up to 125% of the rated force. For applications where loss of power requires increased "fail-in-position" capability, an optional solenoid locking mechanism is available.

### Technical information

Linearity (4-20mA signal)		≥0.5% full scale
Resolution (4-20mA signal)		≥0.1% of signal
Signal voltage drop		7 V @ 20 mA
Duty rating		S9 (continuous modulation)
Ambient temperature	Standard	-22°F to 158°F
	Low temp. (option)	-40°F to 140°F
Enclosure	Standard	NEMA 4&6, IP68
	Haz. Area (option)	Class I, Div 1, Groups B,C,D Class II, Div 1, Groups E,F,G
Finish		Polyester powder coated
Manual override		optional
Status relay	Single pole, normally open,	8A/120VAC/30VDC
Power consumption	Stationary	4.7W @ 110 VAC
	Full load	32.1W @ 110 VAC
	Peak	58.2W @ 110 VAC

Model	Min. thrust (lb.f)	Rated thrust (lb.f)	Max. stroke (inches)	Spindle speed (inches/sec)	Full stroke time* (sec)
CVL500	200	500	1.5	0.25	6
CVL1000	400	1000	2	0.1	20
CVL1500	600	1500	2	0.1	20

\* Time shown is for the maximum actuator stroke. This time is reduced further for valves with a shorter stroke e.g. A ½" SPIRA-TROL has a stroke of ¾", when fitted with a CVL500 it will open or close in 3 seconds.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

Example: CVL500HCM Electric actuator

## Commissioning

For actuators controlled by a 4-20mA analog signal, they will arrive from the factory fully set-up (according to our standard configuration) and ready to install. If a special configuration is required, we will set-up the actuator provided we are given the requirements at the time of the order.

Local configuration can be done using a Bluetooth enabled PDA/Smart-phone running a windows O/S or a Bluetooth enabled PC. The Rotork Enlight software must be installed and is available for free download from the Rotork website at [www.rotork.com](http://www.rotork.com).

Alternatively, if the HART option card is installed, a HART communicator or PC with HART interface and software can be used.

## Dimensions and weights (in and lb)

CVL1500	1/2" to 4"	21.4	10.14	6.3	7.51	53

## PP5 Pneumatic Positioner

### Description

The PP5 positioner is a single acting unit, requiring a 3 - 15 psi signal and is for use with linear pneumatic actuators. The positioner compares the output signal from a pneumatic controller (or transducer) with the valve position feedback, and varies the pneumatic output signal to the actuator accordingly. The valve position is; therefore, guaranteed for any controller output signal and the effects of varying valve differential pressure, stem friction and diaphragm hysteresis are overcome. The positioners can also be used where the controller output signals are of too low a magnitude to be used directly with high pressure actuators. A mounting kit is supplied with each positioner for mounting either to columns or yoke in accordance with NAMUR Standard. Safety covers are provided.

The positioners can be used with the following actuators: PN9000 and TN2000 Series.

### Technical Data

Input signal range	3 - 15 psi (0.2 to 1 bar)
Output signal range	0 to 100% supply air pressure
Supply air pressure	20 to 90 psig (1.4 to 6 barg)
Stroke range	.4 to 4" (10 to 100mm)
Amplification	Adjustable
Hysteresis	Less than 0.5%
Enclosure rating	IP65
Steady State Air consumption	13.06 ft <sup>3</sup> /h at 90 psi (0.7m <sup>3</sup> /hr at 6 bar)
Pneumatic connections	1/4" NPT
Ambient conditions	-4° F to 250° F (-20 to 80°C)

### How To Specify

1- PP5 pneumatic positioner

### Dimensions (nominal) in inches and millimeters

A	B	C	D	Weight
7.0	4.3	6.5	4.3	5.5 lb
175	110	165	110	2.8 kg

### Materials

Base plate and cover

Die cast aluminum with anti corrosive paint

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

# PP5 Pneumatic Positioner

## Accessories

A fixing kit is available to mount an air filter / regulator to the pneumatic actuator.

Fixing kit	Actuator type
FK21	PN9100 Series
FK28	PN9200 or PN9300 Series

## Installation

Full details are contained in the appropriate Installation & Maintenance Instructions supplied with the product.

Block for gauges	

## EP5 Electro Pneumatic Positioner ISP5 Intrinsically Safe E/P Positioner

### Description

The EP5 is a 2-wire Positioner requiring a 4-20 mA input signal, and is for use with linear pneumatic actuators. The positioner compares the electrical signal from a controller with the valve position feedback, and varies a pneumatic output signal to the actuator accordingly. The valve position is therefore guaranteed for any controller output signal and the effects of varying differential pressure, stem friction and diaphragm hysteresis are overcome. A mounting kit is supplied with each positioner for mounting to either columns or yoke in accordance with IEC60534-6-1 standards.

The positioners can be used with the following actuators:  
PN1000/2000, 3000/4000, 9000.

### Technical Data

Input signal range	4-20 mA
Output signal range	0 to 100% supply air pressure
Supply air pressure	20 to 90 psig (1.4 to 6 barg)
Stroke range	.4" to 4" (10 to 100 mm)
Sensitivity	Less than 0.2% span
Linearity	1.0% span
Hysteresis	Less than 0.5%
Input impedance	200 ohms
I Max	50 mA
Temperature Limitations	0 to 175° F (-15 to +65°C)
Enclosure rating	IP54 (approximate equivalent of Nema 3 enclosure) ISP4 Intrinsically safe to EEx.ia IIC T6.T5.T4 (CESI) (approximate equivalent of FM Class I and II, Div. 1, Groups A, B, C, D)
Steady State Air consumption	13.06 ft <sup>3</sup> /h at 90 psi (0.7 m <sup>3</sup> /h at 6 bar)
Pneumatic connections	1/4" NPT
Electrical connections	PG 13.5

### How To Specify

1- EP5 Electro pneumatic positioner.

## SP400 Electropneumatic Smart Positioner

### Description

The SP400 smart valve positioner is a loop powered device that is able to drive linear and quarter turn pneumatic valves. A 4-20 mA input signal determines the valve set point. Precise control is maintained through valve position feedback that automatically varies the pneumatic output pressure to overcome the effects of stem friction and flow forces to maintain desired valve position. Indication of valve position is provided through a continuous digital display of % travel. Valve position feedback is retrieved by means of a non contact technology based on Hall effect. The pneumatics are based on piezovalue technology - Therefore, high resolution, high reliability, vibration insensitivity and extremely low air consumption is guaranteed at steady state.

The SP400 includes many smart functions that can be fully programmed through menu driven software using an integral keypad and LCD alphanumeric data. The absence of mechanical linkages between the valve stem and the positioner, drastically simplifies and reduces the time required for the mounting procedure. Moreover the software has been designed to simplify operations as much as possible: commissioning requires just assembling the SP400 to the valve and pressing one button. The SP400 is supplied with a NAMUR standard mounting kit for attachment to yoke or pillar mounted actuators. For quarter turn valves, a mounting kit compliant to VDI/VDE 3845 is supplied.

### Air supply

The SP400 smart positioner must be provided with a high quality air supply. A Spirax Sarco MPC2 filter regulator with coalescing filter or equivalent must be used. A fixing kit is available to mount the MPC2 filter regulator onto the actuator. For further product data regarding the MPC2 see Technical Information sheet TI-1-609-US.

### Applications

The SP400 can be used with the following pneumatic actuators:

**PN1000 and PN2000 series**

**PNS3000 and PNS4000 series**

**PN9000 series**

**TN2277SE and TN2277SR**

### Optional extras

<b>Gauge block</b>	Complete manifold block with two pressure gauges (supply pressure and pressure to the actuator)

## How to order

Please include all the required optional extras as described on the first page.

**Example:** 1 off Spirax Sarco SP400 000 000 0G4 electropneumatic smart linear positioner equipped with gauge block for full scale pressure of 60 psig.

**Caution:** The SP400 smart positioner must have a high quality air supply. A Spirax Sarco MPC2 filter regulator with coalescing filter or equivalent must be used.

## SP500

# Electropneumatic Smart Positioner

### Description

The SP500 smart valve positioner is a loop powered device that is able to drive linear and quarter turn pneumatic valves. A 4-20 mA input signal determines the valve set point. Precise control is maintained through valve position feedback that automatically varies the pneumatic output pressure to overcome the effects of stem friction and flow forces to maintain desired valve position. Indication of valve position is provided through a continuous digital display of % travel. Valve position feedback is retrieved by means of a non contact technology based on Hall effect. The pneumatics are based on piezovalue technology - Therefore, high resolution, high reliability, vibration insensitivity and extremely low air consumption is guaranteed at steady state.

The SP500 includes many smart functions that can be fully programmed through menu driven software using an integral keypad and LCD alphanumeric data. Valve commissioning is simplified through an autostroke routine and LCD data of programming status, software travel switch status, mA input signal and valve diagnostics data. Moreover, the absence of mechanical linkages between the valve stem and the positioner, drastically simplifies and reduces the time required for the mounting procedure. The SP500 is supplied with a NAMUR standard mounting kit for attachment to yoke or pillar mounted actuators. For quarter turn valves, a mounting kit compliant to VDI/VDE 3845 is supplied.

The SP500 smart valve positioner supports optional expansion to include the HART® communication protocol, enabling complete configuration using a PC or handheld device.

### Air supply

The SP500 smart positioner must be provided with a high quality air supply. A Spirax Sarco MPC2 filter regulator with coalescing filter or equivalent must be used. A fixing kit is available to mount the MPC2 filter regulator onto the actuator. For further product data regarding the MPC2 see Technical Information sheet TI-1-609-US.

### Applications

The SP500 can be used with the following pneumatic actuators:

**PN1000 and PN2000 series, PN9000 series, PM series, PNS3000 and PNS4000 series, and the TN2277SE and TN2277SR**

### Optional extras

<b>Gauge block</b>	Complete manifold block with two pressure gauges (supply pressure and pressure to the actuator)
<b>Retransmission and switch board</b>	4 - 20 mA valve position retransmission and 2 adjustable software switches
<b>Power supply board</b>	Allows 4 wire configuration: 2 for 4 - 20 mA input signal and 2 for independent 24 V power supply reducing positioner impedance to 50 Ω
<b>HART® board</b>	Enables communication using the HART® protocol
<b>Materials</b>

## IPC4A Convertor

### Description

The IPC4A converter is a two wire, wall mounted, electropneumatic converter requiring a standard 4-20 mA input signal to provide a 3 - 15 psi compressed air output signal.

The converter is compatible with Spirax Sarco linear pneumatic actuators series PN5000 and PN6000 and the PP4 pneumatic positioner.

### Applications

The convertor can be used with the following actuators:

Actuator types	PN5000 series
	PN6000 series

### Technical data

Input signal range	4-20 mA
Output signal range	3-15 psi
Supply air pressure	Minimum 20 psi Maximum 50.7 psig
Enclosure rating	IP54
Air consumption	.4 scfm (average)
Pneumatic connections	1/8" NPT
Electrical connections	PG9
Working temperature	0 to 175° F
Input impedance	220 ohms
I Max	50 mA
Linearity	0.5%
Hysteresis	0.2%

### Materials

Base plate	Die cast aluminum with anti corrosive paint
Cover	Reinforced polymer (ABS)

### Dimensions (approximate) in inches and pounds

A	B	C	Weight
3.0	6.0	3.3	2.0 lb

### Safety information, installation and maintenance

Full details are contained in the appropriate Installation and Maintenance Instructions supplied with the product.

### Air and electrical connections

Air connections 1/8" NPT  
Electrical connection PG9

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-P343-07-US 1.14

## MPC2 High Efficiency Compressed Air Filter/Regulator

Spirax Sarco high efficiency oil removing filter/regulator. To provide very high quality compressed air, with accurate pressure control, for pneumatic actuators and general purpose systems.

<b>Model</b>	MPC2
<b>Sizes</b>	1/4"
<b>Connections</b>	1/4" O.D. Tube
<b>Construction</b>	Aluminum/Polycarbonate
<b>Pressure Range</b>	0 to 100 psig

### Limiting Operating Conditions

The product should not be used in shaded area.

### Construction Materials

No.	Part	Material
1	Body	Aluminum
2	Body Finish	Electrophoretic Epoxy Internal and External
3	Bowl	Polycarbonate
4	Bonnet Assembly	Polycarbonate
5	Filter Element	MicroFibre/Stainless Steel
6	Valve	Nitrile

### Pressure Gauge

1-1/2" gauge with face in psi and bar is supplied with each MPC2.

Pressure Range: 0 to 100 psig (0 - 7 barg)

Dimensions (nominal) in inches and millimeters			
Size	A	B	C
1-1/2"	1.5	1.8	R1/8"
	40	47	

Dimensions (nominal) in inches and millimeters					
Size	A	B	C	E	Weight
1/4"	2.5	6.1	1.6	1	1 lb
	65	155	41	25	0.2 kg

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

# MPC2 High Efficiency Compressed Air Filter/Regulator

## FK21 Fixing Kit

All MPC2's come complete with FK21 Fixing Kits to allow direct mounting onto the Spirax Sarco range of PN Pneumatic Actuators.

Dimensions (nominal) in inches and millimeters				
E	F	G	H	J
1.5	1.2	2.4	1.26	0.31
40.0	30.5	61.5	32.0	8.2

## Performance Selection

For any specified **primary** filtration pressure, there is a maximum recommended air flow rate. Keeping within this, will ensure that the element performance maintains the stated high efficiency levels, particularly for the removal of oil and water contaminants.

## Spare Parts

Bowl Assembly (specify with or without Drain) A,B  
Element and O Ring Set B, C, D

### How to order

Example: 1 Element and 'O' ring set for 1/4" Spirax-Monnier Filter/Regulator Type MPC2

## Stonel Position Transmitter

### Description

The Stonel Limit Switch is for use with the K Series pneumatic control valves and PN5000/6000 actuators. It is mounted on the PN5000/6000 actuators and can provide visual indication if the valve is fully open, fully closed, partially open (0-100%) or partially closed (0-100%). By comparing flow rates over time with your valve position, you can determine valve wear.

The Stonel Position Transmitter provides a precise 4-20mA signal on a two-wired DC loop to provide exact valve position. Additionally, two solid state sensors are provided for use in AC and DC computer input circuits.

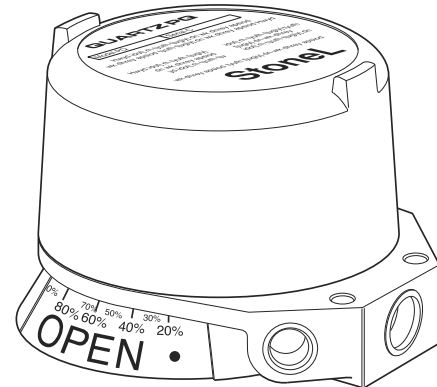

### Technical Data

#### Model No. PQ5XE2R

Junction Features	(1) 3/4" NPT and (1) 1/2" NPT conduit entries
Visual Indicator	OPEN - Green CLOSED - Red
Enclosure Rating (Aluminum Cover)	Factory Mutual and Canadian Standards approved for: Class I: Groups C & D. Divisions 1 and 2. Class II: Groups E, F, G. Division 1. Class II: Groups F & G. Division 2. NEMA 4, 4X and 6
Output Signal	Two wire, 4-20mA
Recommended Supply	24VDC, 50mA minimum
Voltage Range	10 to 40 VDC at terminals
Maximum Loading	700 ohms @ 24 VDC
Sensors	2XSST Solid State Sensors
Electrical Ratings	0.3A @ 120VAC (continuous)
Temperature Range	-40° to 180°F (-40° to 82°C)
Operating Life	unlimited
Maximum Voltage	6.5 volts @ 10 mA
Drop	7.0 volts @ 100 mA
Minimum Current for LED Illumination	2.0 mA

### Construction Materials

Part	Material
Cover Features	Epoxy coated anodized aluminum cover (optional clear Lexan cover)
O-Ring Seals	Viton
Shaft and Drive	All materials are 303 or 316 stainless steel
Internal Fasteners	Stainless Steel

### Installation

Full details are contained in the appropriate Installation & Maintenance Instructions supplied with the product.

\* The 1/2" Conduit Entry is Located on the Left Side of the 3/4" Conduit Entry

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-1-616-US 09.03

## Stonel Limit Switch

### Description

The Stonel Limit Switch is for use with the K Series pneumatic control valves and PN5000/6000 actuators. It is mounted on the PN5000/6000 actuators and can provide visual indication if the valve is fully open, fully closed, partially open (0-100%) or partially closed (0-100%).

The Stonel Limit Switch has fully adjustable cams which allow the switches to be set to be actuated at any desired valve travel.

### Technical Data

#### Model No. PQ2SE2R

Function	2 switches
Switch Data	2x SPDT. Maxx-Guard LED Proximity switches
Junction Features	(1) 3/4" NPT and (1) 1/2" NPT conduit entries
Visual Indicator	OPEN - Green CLOSED - Red
Enclosure Rating (Aluminum Cover)	Factory Mutual and Canadian Standards approved for: Class I: Groups C & D. Divisions 1 and 2. Class II: Groups E, F, G. Division 1. Class II: Groups F & G. Division 2. NEMA 4, 4X and 6
Sensors	SPDT
Electrical Ratings	0.3A @ 120VAC
Temperature Range	-23° to 180°F (-40° to 82°C)
Seal	Hermetically Sealed
Operating Life	5,000,000 cycles
Maximum Voltage Drop	3.5 volts @ 10 mA 6.5 volts @ 100 mA
Minimum Current for LED Illumination	2.0 mA

### Construction Materials

Part	Material
Cover Features	Epoxy coated anodized aluminum cover (optional clear Lexan cover)
O-Ring Seals	Viton

## PN600 Series Pneumatic Controllers

### Description

The PN600 series pneumatic controllers provide temperature or pressure control providing a 3 - 15 psi output signal with proportional (plus manual reset) or proportional plus integral control action. An optional stainless steel pocket type W30S is available for use with temperature sensors.

The range of pneumatic controllers can be used in conjunction with PN5000 and PN6000 series linear actuators and PP4 pneumatic positioners.

### Available Types

#### Temperature control

Model	Control function	Scale range
662-T5-M5*	Proportional (+ Manual reset)	212°F
662-T5-M5	Proportional (+ Manual reset)	122 - 302°F
662-T5-M5*	Proportional (+ Manual reset)	77 - 257°F
662-T5SY-M5	Proportional (+ Manual reset)	77 - 257°F
663-T5-M5*	Proportional + Integral	212°F
663-T5-M5	Proportional + Integral	122 - 302°F
663-T5-M5*	Proportional + Integral	77 - 257°F
663-T5SY-M5	Proportional + Integral	77 - 257°F

T5 = Nitrogen filled sensing bulb and capillary

SY = Sensing bulb for sterile applications

M5 = 5 metres capillary tube (\* Option of 10 metres - Suffix 'M10')

#### Pressure Control

622	Proportional (+ Manual reset)	0 - 102 psi
622	Proportional (+ Manual reset)	0 - 290 psi
623	Proportional + Integral	0 - 102 psi
623	Proportional + Integral	0 - 290 psi

#### Other options available include:-

Pneumatic receiver for 3 to 15 psi g input signal.

Electromechanical receiver for 4-20 mA, 0-10 Vdc, RTD Pt100 or thermocouple input signal.

#### Other scale ranges available:-

Pressure (psi)

Scale span options up to 7,250 psi

Temperature (°F)

Scale span options for:-

122, 167, 212, 302, 392, 572 and 752°F

### Measuring elements

#### Pressure

Bourdon tube	AISI 316L stainless steel
Connection	NPT
Maximum pressure	+25% of scale range

#### Temperature

Bulb and capillary	AISI 316L stainless steel
	- Cylindrical bulb for liquids
	- Sanitary bulb for sterile applications
	(Option available with spiral bulb for air /gas)
Bulb connection	NPT
Capillary length	16.5 ft
	32 ft (in some ranges)
	(Other options available)
Max. measured temperature	+25% of scale range

#### Pocket - Type W30S (optional)

Material	AISI 316L	Stainless steel
Connection	NPT	
Maximum pressure	PN40	

Optional pocket type W30S

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

## Technical data

### Controller

Enclosure rating	IP54 (Standard) IP55 (Optional)
Scale length	100mm
Pointers	Measured value - black Set point - red
Gauges	Output signal pressure (bar/psi g)
Control mode	Proportional (5-200% of scale range) Integral (0.1 to 20 repeats per minute)
Output signal	2.9 - 14.5 psi
Control action	Direct or reverse action - Field reversable
Set point adjustment	Manual adjustment
Accuracy	1% of range span
Sensitivity	0.2% of range span
Repeatability	0.5% of range span
Linearity	0.5% of range span
Air supply	20.3 psi
Air consumption	.4 scfm (average)
Air connections	¼ " NPT
Ambient temperature limits	5°F to 149°F
Mounting	Wall or flush panel mounted
Weight	7.7 lbs

## SX80 Process Controller

### Description

The SX80 controller is a 1/16 DIN panel mounted unit, suitable for single and multiple set point applications utilising the Spirax Sarco range of pneumatic or electric control valves and electrical and electropneumatic instruments. The SX80 has both VMD (3 point) and analogue (4-20 mA) outputs in the same unit and features quick start codes for ease of commissioning.

### SX80 features:

- **Universal input** - Resistance thermometers, thermocouples, mA and mV.
- **Universal output** - VMD (valve motor drive), mA and voltage for continuous, relay and logic for switching control.
- **Auxiliary power supply** - For external transmitter requiring 18 Vdc.
- **Text messages** - Scrolling text messages can be configured to alert the user to process conditions.
- **Quick codes** - 5-digit quick codes enable easy set-up and commissioning of the controllers.

### Approvals

These controllers conform to the Council Directive 93/68/EEC and the regulations on the essential protection requirements in Electrical Apparatus EN 61010-1: 90

- **EMC emissions specification:** EN 61326-1: 1997 Class B (including amendments A1, A2 and A3).
- **EMC immunity specification:** EN 61326-1: 1997 Industrial locations (including amendments A1, A2 and A3).

See overleaf for SX80 Process Controller technical data

## Technical data

### General details

Mounting arrangement	Panel mounted 1/16 DIN
Power supply	85 to 265 Vac, 6 W maximum
Electrical connections	Screw connection terminal block
Panel sealing	IP65 – plug in from front panel, NEMA 4X
Operating temperature/humidity	0 to 55°C, 5 to 85% RH
Atmospheres	Not suitable for use in explosive or corrosive atmospheres
Electromagnetic compatibility (EMC)	EN 61326
Electrical safety BS EN 61010	Installation Category II
Weight	0.6 lb (250 g)
Approvals	CE

### Process variable inputs

Calibration accuracy	< ±0.25% reading ±1 LSD
Resolution	< 0.5 µV with 1.6 second filter
Input filter	Off to 59.9 seconds
RTD	3 wire Pt100 DIN 43760
Bulb current	0.2 mA
Universal linear mA	4 - 20 mA, 0 - 20 mA, using external shunt resistor 2.49 Ω
Linear input range	-10 to 80 mV
Thermocouples	K, J, N, R, S, B, L, T, C, custom
Sampling rate	4 Hz (250 ms)
Cold junction accuracy	< ±1°C at 25°C ambient
Accuracy linear mA	< 0.1% reading
Input impedance	100 MΩ
Number of set points	3
User calibration	2 point gain and offset

### Transmitter power supply

Isolation	300 Vac double isolated
Output voltage	18 V ±15%
Current	30 mA maximum
Load regulation	< 1 V over 25 mA

### Control action

Proportional band	1 - 9999 Engineering units or 0.01 to 300 %age or 0.1 - 3000
Integral time	Off - 9999
Derivative time	Off - 9999
Error band	One shot tune, or natural frequency tune. The controller will automatically select the best method according to the process conditions.
Auto tuning	Hysteresis from 0.01 to 300.0 or 0.1 to 3000 Engineering units
On-off control	1 - 9999 Engineering units or 0.01 to 300 %age or 0.1 - 3000
Cut back	To minimise overshoot on critical processes.
Auto / manual modes	Selectable from keyboard.

### Relays

Isolation	300 Vac double insulated
Output range	0 – 20 mA, 4 – 20 mA
Resolution	13.5 bits
Contact rating	Maximum 2 A @ 264 Vac resistive
Note:	Maximum 2 A per terminal limit applies where relays have common terminals (2 amps maximum for terminal AB).

### Logic inputs (x2)

Contact closure	Open >1200R Closed <300R
-----------------	-----------------------------

### Isolated dc output

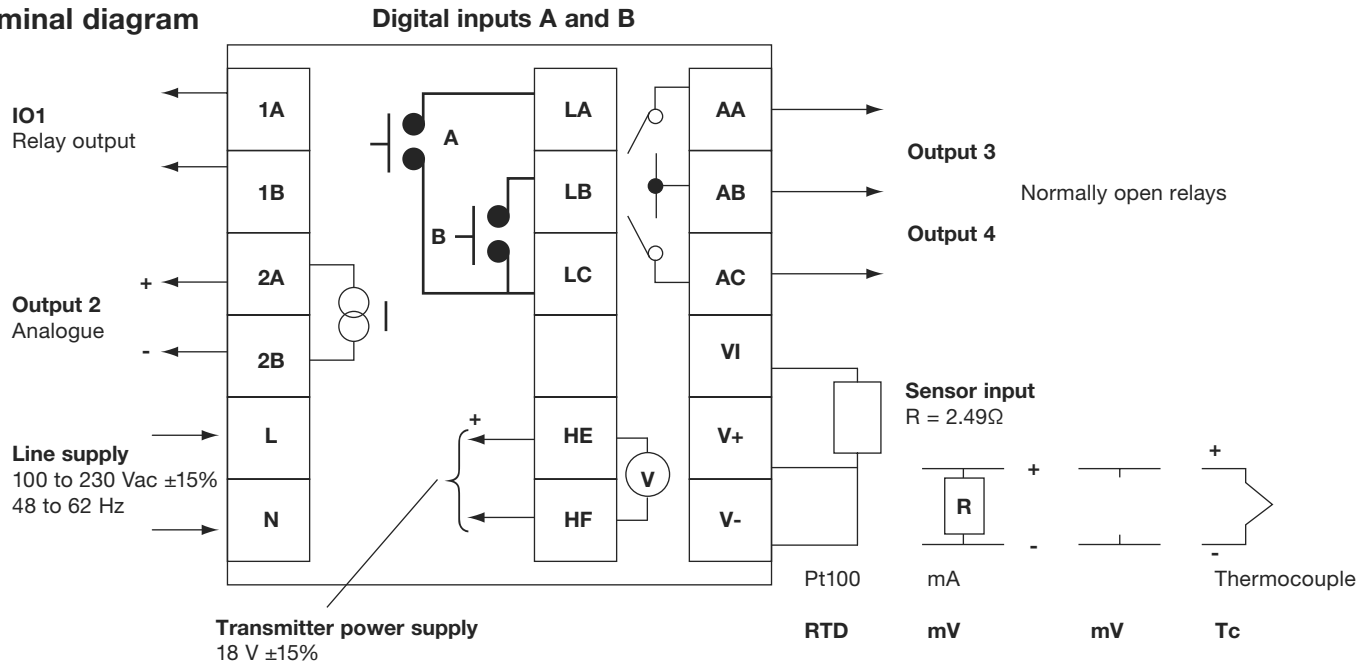

Isolation	300 Vac double insulated
Output range	0 – 20 mA, 4 – 20 mA
Resolution	13.5 bits

## SX90 Process Controller

### Description

The SX90 is a panel mounted 1/8th DIN controller, suitable for constant set point control of systems having fixed pre-programmed set points. The controller has universal inputs, and outputs using PID for close control of industrial processes. The SX90 controller is for use with the Spirax Sarco range of pneumatic and electric control valves and electrical and electropneumatic instruments.

### SX90 features:

- **Universal input** - Resistance thermometers, thermocouples, mA and mV.
- **Universal output** - VMD (valve motor drive), mA and voltage for continuous, relay and logic for switching control.
- **Auxiliary power supply** - For external transmitter requiring 24 Vdc.
- **Set point** - The SX90 can operate with local set point, remote set point, or a choice of 4 set points can be selected.
- **Ramps** - There are 2 independent ramps (ramp up and ramp down) for rate of change from one set point to another.
- **Remote set point** - For cascade control (master/slave) using 2 controllers working together, or to remotely control the set point.
- **Retransmission** - For retransmission of the process value, set value, or as second analogue output.
- **Event alarm** - 4 programmable relay outputs for deviation, band, and process alarms.
- **Quick codes** - 5-digit quick codes enable easy set-up and commissioning of the controllers
- **Serial communications** - For connecting via a serial port RS 485 (5 wire), up to 64 controllers into a supervisory system.
- **Auto/man** - The automatic to manual mode can be changed via the key board, or logic inputs.
- **Logic inputs** - 3 logic inputs to provide a variety of selectable functions.
- **Potentiometer Input** - For feedback of valve position.
- **Text messages** - Scrolling text messages can be configured to alert the user to process conditions.
- **Forced output** - Forced output level defined by instrument parameter and activated by a logic input or by writing to the parameter.

### Approvals

These controllers conform to the Council Directive 93/68/EEC and the regulations on the essential protection requirements in Electrical Apparatus EN 61010-1.90.

- **EMC emissions specification:** EN 61326-1: 1997 Class B (including amendments A1, A2 and A3).
- **EMC immunity specification:** EN 61326-1: 1997 Industrialallocations (including amendments A1, A2 and A3).

## PF6 Series Stainless Steel Piston Actuated On/Off Valves

### Description

A 2-port pneumatically actuated on / off stainless steel valve for use on steam, water, air, oil and gases. A pneumatic signal acts on the actuator piston to open or close the valve with a spring return action. The valve plugs have a PTFE soft seal (**G**) to provide a tight shut-off. A valve position indicator is included on standard and flow regulator models.

Valves are available with one of three sizes of actuator:

**Type 1** (45 mm), **Type 2** (63 mm) and **Type 3** (90 mm) with the following action options:

- **NC (Normally Closed)**

These valves are designed for flow over the seat (port 1 to 2). Recommended for pneumatic applications. Not recommended for water applications.

- **NO (Normally Open)**

These valves are designed for flow under the seat (port 2 to 1). Can be used to prevent waterhammer on valve closure in liquid applications.

- **BD (Bi-Directional normally closed)**

These valves are designed for special applications that require flow in both directions and incorporates an anti-waterhammer design for liquid applications flowing under the seat (port 2 to 1). Note: To help prevent the possibility of waterhammer on liquid applications flowing over the seat (port 1 to 2) the pressure should not exceed 15 psig.

**Optional extras** (see 'Valve selection guide', page 7):

- Travel switch    - Flow regulator

### Sizes, pipe connections and actuator combinations

Valve type	Pipe connections	Actuator type	Actuator size

## Stainless Steel Piston Actuated On/Off Valves

### Valve selection guide

<b>Valve type</b>	P = Piston valve		P
<b>Valve characteristic</b>	F = Fast opening		F
<b>Body material</b>	6 = Stainless steel		G
	1 = BSP or NPT		
<b>Connections</b>	3 = Flanged	EN 1092 or ANSI Class 150 (welded on flanges)	1
	5 = Sanitary clamp	ISO 2852	
<b>Valve plug seal</b>	G = PTFE		G
	1 = 45 mm diameter		
<b>Actuator type</b>	2 = 63 mm diameter		2
	3 = 90 mm diameter		
<b>Valve position</b>	NC = Normally Closed		NC
	NO = Normally Open		
	BD = Bi-Directional		
<b>Valve size</b>	1/2", 3/4", 1", 1-1/4", 1-1/2", 2"		1"
	I = Travel switch	Provides indication of open or closed valve position through a magnetic reed switch with volt free contacts. Maximum rating: Voltage (V) = 500 V, Current (I) = 0.5 A, Power (P) = 30 VA.	I
<b>Optional</b>	R = Flow regulator	Available on Type 2 and Type 3 actuators with suffix 'I' if this option is required. Provides manual control of maximum flow through the valve. Can also provide manual shut-off on normally open valves. Available on Type 2 and Type 3 actuators with suffix 'R' if this option is required.	

**Note:** Shaded areas represent fixed parameters

TravelSwitch

### How to order

**Example:** 1 of Spirax Sarco PF61G-2NC-1" NPT- I stainless steel piston actuated on/off valve having NPT connections, with travel switch

### Spare parts

A seal kit is available for all valve and actuator sizes comprising: Piston lip seal, stem 'O' ring, valve head seal (PTFE), body seal and 'O' ring.

### How to order spare seal kits

Always order spares by specifying the valve size, type and date code (given on the actuator label i.e. 120 = week 12, year 2000).

**Example:** 1 of Seal kit for a 1" PF61G-2NC, date code 120.

### Safety information, installation and maintenance

For full details, see the Installation and Maintenance Instructions supplied with the product.

**Installation note:** These valves can be mounted in any orientation. The actuator can be rotated 360° in the direction indicated on the product label to facilitate easy pilot mounting connection.

## Stainless Steel Piston Actuated On/Off Valves

### Associated equipment

#### Pilot solenoid

Type DM 3-port two way electropneumatic pilot solenoid valve that can be directly mounted (banjo connection) to the PF61G-NC, NO and BD series piston actuated valves to provide actuator pilot pressure to open normally closed or close normally open valves. Suitable for air or water operating media. The valve is supplied with a DIN connector. For full details refer to the relevant Technical Information Sheet.

### Available types

Model	Type	Actuator	Frequency/ Voltage	Actuator Connection	Line Connection
DM11N	1	45 mm	230/50 or 240/60 Vac	1/8" BSP	1/8" NPT

DM13N	1	45 mm	24/50 or 24/60 Vac	1/8" BSP	1/8" NPT
DM14N	1	45 mm	24 Vdc	1/8" BSP	1/8" NPT
DM21N	2	63 mm	230/50 or 240/60 Vac	1/4" BSP	1/8" NPT
DM22N	2	63 mm	110/50 or 120/60 Vac	1/4" BSP	1/8" NPT
DM23N	2	63 mm	24/50 or 24/60 Vac	1/4" BSP	1/8" NPT
DM24N	2	63 mm	24 Vdc	1/4" BSP	1/8" NPT
DM31N	3	90 mm	230/50 or 240/60 Vac	1/4" BSP	1/8" NPT
DM32N	3	90 mm	110/50 or 120/60 Vac	1/4" BSP	1/8" NPT
DM33N	3	90 mm	24/50 or 24/60 Vac	1/4" BSP	1/8" NPT
DM34N	3	90 mm	24 Vdc	1/4" BSP	1/8" NPT

## PF51G Bronze Piston Actuated On/Off Valves

### Description

A 2-port pneumatically actuated on / off bronze valve for use on water, air, oil and gases. It can also be used on lower specification steam applications.

A pneumatic signal acts on the actuator piston to open or close the valve with a spring return action. The valve plugs have a PTFE soft seal (**G**) to provide a tight shut-off. A valve position indicator is included on standard and flow regulator models.

Valves are available with one of three sizes of actuator:

**Type 1** (45 mm), **Type 2** (63 mm) and **Type 3** (90 mm) with the following action options:

- **NC (Normally Closed)**

These valves are designed for flow over the seat (port 1 to 2).

Recommended for pneumatic applications. Not recommended for water applications.

- **NO (Normally Open)**

These valves are designed for flow under the seat (port 2 to 1).

Can be used to prevent waterhammer on valve closure in liquid applications.

- **BD (Bi-Directional normally closed)**

These valves are designed for special applications that require flow in both directions and incorporates an anti-waterhammer design for liquid applications flowing under the seat (port 2 to 1). **Note:** To help prevent the possibility of waterhammer on liquid applications flowing over the seat (port 1 to 2) the pressure should not exceed 15 psig.

### Optional extras (see 'Valve selection guide', page 7):

- Travel switch.
- Flow regulator.

### Sizes, pipe connections and actuator combinations

Valve type	Pipe connections	Valve action	Actuator type	Model	Sizes						
					1/2"	3/4"	1"	1-1/4"	1-1/2"	2"

### Valve selection guide example

NPT

## How to order

**Example:** 1 of Spirax Sarco PF51G-2NC-1" NPT bronze piston actuated on/off valve having screwed BSP connections.

## Spare parts

A seal kit is available for all valve and actuator sizes comprising: Piston lip seal, stem 'O' ring, valve head seal (PTFE) body seal.

## How to order spare seal kits

Always order spares by specifying the valve size, type and date code (given on the actuator label i.e. 120 = week 12, year 2000).

**Example:** 1 of Seal kit for a PF51G-2NC-1" NPT, date code 120.

## Safety information, installation and maintenance

For full details, see the Installation and Maintenance Instructions supplied with the product.

**Installation note:** These valves can be mounted in any orientation. The actuator can be rotated 360° in the direction indicated on the product label to facilitate easy pilot mounting connection.

## DM Pilot Solenoid Valves for use with Piston Actuated Valves

### Description

A 3 way normally closed electropneumatic pilot solenoid valve that can be directly mounted (banjo connection) to the PF51G, and PF61G-NC, NO and BD series piston actuated valves.

Suitable for air, water or inert gas operating media. The valve is supplied with a DIN connector and fitted with manual override as standard.

### Available types

Model	Actuator	Voltage/Frequency	Actuator Connection
DM11N	45mm	240/60 VAC	1/8" BSP
DM12N	45mm	120/60 VAC	1/8" BSP
DM13N	45mm	24/60 VAC	1/8" BSP
DM14N	45mm	24 VDC	1/8" BSP
DM21N	63mm	240/60 VAC	1/4" BSP
DM22N	63mm	120/60 VAC	1/4" BSP
DM23N	63mm	24/60 VAC	1/4" BSP
DM24N	63mm	24 VDC	1/4" BSP

	DM33N, DM34N	AC 30VA (inrush) DC 10W

### Limiting conditions

Maximum media temperature	140°F
Minimum media temperature	14°F
Protection class	IP65 (with connector)
Operating pressure	0 - 150 psig

### Materials

Part	Material
Body	ELNP Niploy coated brass
Seal	FKM

### Spare parts

Coil and/or DIN connector available, consult Spirax Sarco, Inc.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

### Dimensions / weights (approximate) in inches and lbs.

Type	A	B	C	Weight
DM11N, DM12N, DM13N and DM14N	1.22	3.03	1.06	0.60
DM21N, DM22N, DM23N and DM24N	1.38	3.07	1.06	0.60
DM31N, DM32N, DM33N and DM34N	1.38	3.74	1.06	0.84

Note: DM31N Series shown

### Installation

The valve can be directly mounted (banjo connection) onto the actuator.

### How to order

Example: 1-DM21N Pilot Solenoid Valve 240 VAC

## MDM Manifold Pilot Solenoid Valves for use with Piston Actuated Valves

### Description

A series of 3 way normally closed, solenoid operated, manifold pilot valves that are joined together and supply pressure to operate a corresponding number of Piston Actuated Valves. This manifold assembly may be mounted in any position. They are suitable for air or water media.

Standard for each manifold valve is a manual override button, FKM seals, a strain relief electrical connector with IP65 protection.

### Technical details

Construction material:	Body — Brass Seals — Viton
Mounting:	Universal, any position Accepts #6 machine screws
Manual Override:	Slotted 180° turn-button
Pilot Valve Connections:	1/8" NPT common "IN" 1/8" NPT individual "OUT"
Electrical Connection:	DIN 43650 Form B
Coil Consumption:	AC: 9 VA (holding) 14 VA (inrush) DC: 7 W

### Limiting conditions

Maximum media temperature:	140°F
Minimum media temperature:	14°F
Protection class:	IP65 (with DIN connector)
Operating pressure:	0 - 150 psig

### Dimensions / weights (approximate) in inches and lbs.

Station	C inches	Weight pounds
2	3.00	1.3
3	4.00	1.9
4	5.00	2.5
5	6.00	3.1
6	7.00	3.7
7	8.00	4.3
8	9.00	4.9

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

# MDM Manifold Pilot Solenoid Valves for use with Piston Actuated Valves

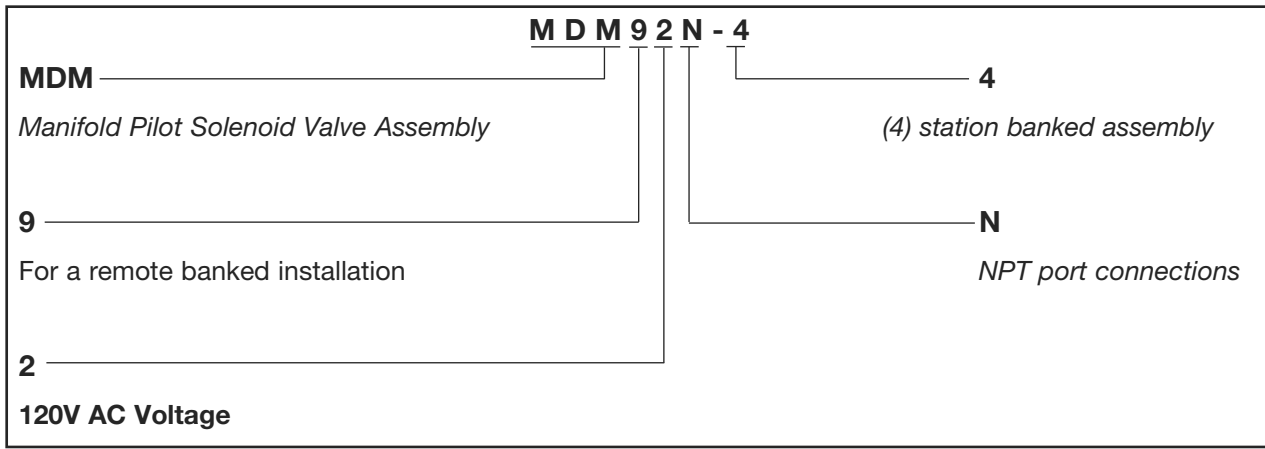

## Installation

The manifold pilot solenoid valve assembly can be directly mounted to a system plate in any position. Incoming pilot pressure to connect with the *common* "IN" port (end). Outgoing pilot pressure to connect from the *individual* "OUT" ports (sides).

Each "Out" port line to connect to a corresponding Piston Actuated Valve actuator. Note: When attaching to the PAV's with 63mm or 90mm actuator heads, it will be necessary to bush up from 1/8" NPT to 1/4" NPT.

## Order Information

Example: **MDM92N-4**  
A (4) station manifold Pilot Solenoid Valve assembly, 120V AC,  
1/8" NPT for a 45mm or 63mm Piston Actuate Valve.

## Available Types

Model Number	Pav Actuator	Voltage/Frequency	Port Connections
MDM91N-X*	45, 63mm**	240V AC	1/8" NPT
MDM92N-X*	45, 63mm**	120V AC	1/8" NPT
MDM93N-X*	45, 63mm**	24V AC	1/8" NPT
MDM93N-X*	45, 63mm**	24V DC	1/8" NPT

\* X denotes number of manifold stations. Number may be from (2) to (8) depending on amount of PAV's requiring service. For information on additional stations, consult Spirax Sarco, Inc.

\*\*90mm Actuators, consult Spirax Sarco, Inc.

## VAD Variable Area Desuperheaters

### Desuperheater overview

Steam used in process plants can be superheated, that is, heated to a temperature above saturation. The excess of temperature above its saturation is called 'superheat'.

Desuperheated steam is more efficient in the transfer of thermal energy, consequently desuperheaters are used to bring the outlet steam temperature closer to that of saturation for the steam pressure.

Desuperheaters reduce the temperature of superheated process steam by introducing finely atomized cooling water droplets into the steam flow. As the droplets evaporate, sensible heat from the superheated steam is converted into latent heat of vaporization.

**As standard** the VAD is supplied with an actuator. The following **optional extras** can be supplied if requested when placing an order: **Positioner, Regulator** and **Limit switch**.

#### A typical desuperheater installation is shown below:

<b>1st stop valve</b>	Required to isolate the system from inlet water.
<b>Strainer</b>	Required with 100 mesh screen to maintain the water supply in a condition that won't block the desuperheater nozzles.
<b>Check valve</b>	Required to prevent steam from flowing back into the water inlet - The preferred selection would be an LCV lift check valve as it will give optimum performance in this application.
<b>2nd stop valve</b>	Required to isolate the system for maintenance.

**Note:** These ancillaries are not delivered with VAD and should be purchased separately

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

# VAD

## Variable Area Desuperheaters

### General description

Spirax Sarco VAD variable area desuperheaters reduce the temperature of superheated steam by spraying atomized water through a variable area nozzle, producing near-saturated steam for a wide steam turndown ratio (max 50:1). There are two VAD options available depending on the  $C_V$  value and control rangeability required for the application.

#### VAD a

in conjunction with a PN9000 series actuator  
1.2" (30 mm) travel  $C_V$  0.11 to  $C_V$  1.6 (Kv 0.1 to Kv 1.4)

#### VAD b

in conjunction with a PN9400 series actuator  
2.75" (70 mm) travel  $C_V$  2.1 to  $C_V$  4.6 (Kv 1.8 to Kv 4)

### Description

The **VAD a** variable area desuperheater has been designed to perform between a  $C_V$  of 0.11 to  $C_V$  1.6 (Kv 0.1 to Kv 1.4)

The main advantages of the Spirax Sarco VAD is its full modularity, as the components can be adjusted to meet each individual application needs; on site if needed. The nozzle can also be replaced to accommodate a change in flow requirement. The cooling water is atomized through a number of nozzles which are successively opened by the linear movement of a plug controlled by the actuator.

As standard, it is designed and coupled with the PN9000 Series actuator 1.2" (30 mm) travel.

The steam branch line connection is 3" (DN80) as standard, but could be customized at the required dimension.

The water connection is ½" (DN15) as standard, but could be customized.

The standard dimensional lengths of the top and bottom pipe extensions of the desuperheater, as well as the position of the water connection, are shown on the corresponding pages, but please note that these can be customized to meet any specific application to meet your needs.

### Description

As standard, the **VAD b** is designed to and coupled with the PN9400 Series actuator. The water atomization is done through up to 18 nozzles which are successively opened with the linear move of the plug.

The steam branch line connection is 3" (DN80) as standard, but could be customized at the required dimension.

The water connection is ½" (DN15) as standard, but could be customized or increased for a higher  $C_V$  than 4.6

The standard dimensional lengths of the top and bottom pipe extensions of the desuperheater, as well as the position of the water connection are shown on the corresponding pages, but please note that these can be customized to meet any specific application to meet your needs.

# VAD

## Variable Area Desuperheaters

### Typical applications:

- To reduce the temperature of steam discharged from turbine by-pass systems on power plants for heat exchangers, and dump stations.
- To improve heat transfer of indirect contact heat exchangers - shell and tube, plate type, and reactor heating jackets.
- To reduce the temperature of steam on direct contact applications - food cooking kettles, in-line steam heaters, tobacco drying plant and paper mills.

### Features:

- Low cost simple, robust design.
- Minimal steam pressure drop.
- Flexible design options.

### Standards and approvals

Spirax Sarco desuperheaters are available built to ASME B 16.34 design code. Also available are ASME VIII Division 1.

This product fully complies with the requirements of the European Pressure Equipment Directive 97 / 23 / EC and carries the CE mark when so required.

Welding is in accordance with ASME IX.

Connections (EN 1092 or ASME B16.5) are sized to suit the process conditions.

Standard ASTM materials of construction include: Carbon steel, Stainless steel, and Chrome molybdenum steel.

### Certification

The following certificates / documents can be supplied at an additional cost:

- Material certificates to EN 10204 3.1 with a corresponding material location diagram.
- NDT reports.

### Air signal

The VAD lift should be controlled by use of a positioner, the maximum **air pressure on the actuator should be limited to 60 psig (4 barg)**. **The fail safe position of the standard VAD unit is in the shut off position, spring-retract and will shut off water when retracted.** **Optionally**, if request at the point of order, the unit can be supplied in the fail safe open position and the unit nomenclature will be denoted by an 'E' (for spring-extend) in the description i.e. VAD a E.

### Positioners

Compatible with PP5, EP5, ISP5, SP400 and SP500 positioners.

### Material

No.	Part	Material	
1	Nozzle	Stainless steel	AISI 431
2	Seat	Stainless steel	AISI 431
3	Plug	Stainless steel	
4	Lock-nut	Stainless steel	
5	Stem	Stainless steel	AISI 431
6	Bottom pipe extension	Carbon steel	
7	Main steam flange	Carbon steel	ASTM A105N
8	Water flange	Carbon steel	ASTM A105N
9	Top pipe extension	Carbon steel	ASTM A105N
10	Packing	Graphite	
11	Packing bolting	Stainless steel	
12	Nut	Stainless steel	
13	Setting nut	Stainless steel	
14	Seat gasket	Graphite	
15	Stem bearing	Stellite Grade 6	

**Alternative material:** Depending on the condition of use, Spirax Sarco can change the carbon steel body material to alloy steel or stainless steel.

**Please note:**  
The parts identified in the illustration are exactly the same for both the VAD a and the VAD b

TI-P451-01-US 10.15

# VAD

## Variable Area Desuperheaters

**Pressure / temperature limits:**

The Spirax Sarco VAD variable area desuperheater has a carbon steel body as standard but can be produced in any material grade to special order.

'4' denotes a carbon steel desuperheater

'6' denotes an austenitic stainless steel desuperheater

'8' denotes an alloy steel desuperheater

**Please note** that the pressure and temperature limits for the VAD product range is governed by the flange connection of choice:

Flanges	PMA psig @ °F (bar g @ °C)	TMA °F @ psig (°C @ bar g)
<b>VAD4</b>	ASME 150 284 @ 100°F (19.6 @ 38°C)	800°F @ 80 (425°C @ 5.5)

# VAD

## Variable Area Desuperheaters

### Dimensions/weights (approximate) in inches and pounds (mm and kg)

Dimensionally there are **two versions** available the 'Standard' and the 'L' version for use on larger pipelines of 12" (300 mm).

**Please note** that the dimensions in brackets [ ] are for the 'L' version.

#### Weights

<b>VAD a</b>	80 lbs (35 kg)
<b>VAD b</b>	155 lbs (70 kg)

#### \*Please note:

This dimension becomes 4" (100 mm) when the flange is greater than 1" (25 mm) or the pressure is greater than A600 / PN100.

#### † Please note - Nozzles

When installing the VAD into its application **the nozzles must face towards the direction of the steam flow**. To suit the layout of the water pipeline, the inlet water flange is available in 4 different locations, please see the orientation diagram below:

#### Orientation

# VAD

## Variable Area Desuperheaters

### Safety information, installation and maintainance

For full details see the Installation and Maintenance Instructions that are supplied with the product.

#### Installation note:

Desuperheaters may be installed either horizontally or vertically with the steam flowing upwards.

Spirax Sarco strongly advises against installations in which the steam flow is vertically downwards.

In the case of a horizontal installation the cooling water connection should ideally point downstream, as this gives the best orientation for drainage of fluids in a shutdown situation. Other orientations are acceptable for satisfactory operation, but drainage is not as effective.

In a vertical installation we recommend that, the cooling water pipework should be brought to the desuperheater from below the corresponding connections on the desuperheater. This will provide the best layout for drainage of fluids on shutdown.

The VAD must be sited in location on the pipeline that offers a stable flow - An unstable flow will affect the mixing efficiency of the VAD.

The **temperature sensor** should be located a minimum distance of 40 ft (12 m) after the VAD, however for optimum temperature control it is recommended that it be installed at the point of use.

A **minimum length of 16 ft (5 m)** should be present before a pipe elbow. A thermal sleeve is recommended to protect the elbow from corrosion and erosion.

The **steam pipeline** should be of at least 6" (DN150). At steam line sizes up to and including 20" NB, we recommend the thermal sleeve is manufactured from pipe which is one size smaller than the steam line. Above 20" NB steam line size, we recommend the thermal sleeve is two sizes smaller.

Pipe size should ensure a minimum 16 ft/sec (5m/s) velocity in each flowrate, in case of lower value please contact Spirax Sarco.

**Water** must be supplied with more than 45 psi (3 bar) differential pressure to the steam.

#### Disposal

The product is recyclable. No ecological hazard is anticipated with disposal of this product, providing due care is taken.

The location of the VAD in the pipeline must be such that it offers a stabilized flow. Unstabilized flow will affect the mixing efficiency.

The VAD must be sited in location on the pipeline that offers a stable flow - Unstabilized flow will affect the mixing efficiency.

# VAD

## Variable Area Desuperheaters

### How to order

Please send the following process data to Spirax Sarco so that we can select the optimum solution for your application.

### Minimum information required to size the desuperheater:

- Maximum and minimum superheated steam condition (Pressure, temperature and flowrate).
- Required outlet steam temperature.
- Available water condition (Pressure and temperature).

		Minimum	Nominal	Maximum
<b>Superheated steam</b>	Pressure			
	Temperature			
	Flow			
<b>Steam outlet</b>	Temperature			
<b>Water</b>	Pressure			
	Temperature			

Additional information	Please state if you require any of the following, the number(s) required and nomenclature if known:	Positioner(s)	Air regulator(s)	Limit switch(s)

Further information, that if supplied, will help in selecting the optimal solution for your application:

Design pressure	
Design temperature	
Superheated steam size	
Required flanged desuperheaters flange	
Required flanged water flange	
Fail safe position - Specify either Open or Closed	

### Selection chart

### Cv (Kv) table

Desuperheater	VAD a	VAD b
<b>Travel</b>	1.2 (30 mm)	2.75 (70 mm)
<b>Rangeability</b>	1:20	1:40
<b>Maximum turndown</b>	50:1	50:1
<b>Cv (Kv) standard</b>	1.6 (1.40)	4.6 (4.0)
	1.15 (1.00)	4.3 (3.7)
	0.7 (0.60)	3.8 (3.3)
	0.6 (0.54)	3.3 (2.9)
	0.5 (0.45)	2.9 (2.5)
	0.45 (0.40)	2.4 (2.1)
	0.25 (0.20)	2.1 (1.8)
	0.11 (0.10)	

**Note:** For lower or higher Cv please contact Spirax Sarco

## Direct Contact Desuperheaters

### Description

Spirax Sarco direct contact desuperheaters reduce the temperature of superheated steam to produce steam temperatures approaching saturation temperature to cool the superheated steam, water is entrained and flashed into vapor by absorbing heat from the steam.

### Typical applications:

- To reduce the temperature of steam discharged from turbine by-pass systems on power plants for heat exchangers and dump stations.
- To improve heat transfer of indirect contact heat exchangers - shell and tube, plate type, and reactor heating jackets.
- To reduce the temperature of steam on direct contact applications - food cooking kettles, in-line steam heaters, tobacco drying plant and paper mills.

Send us your requirements using our Desuperheater Enquiry Form available from our website.

### Features:

- Low cost simple, robust design.
- No moving parts to wear.
- Minimal steam pressure drop.
- Flexible design options.

### Standards and approvals

Spirax Sarco desuperheaters are available built to ASME B 31.3 design code. Also available are ASME III Division 1.

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the **CE** mark when so required.

Welding is in accordance with ASME IX.

Connections (EN 1092 or ASME B16.5) are sized to suit the process conditions.

Standard ASTM materials of construction include: Carbon steel, Stainless steel, and Chrome molybdenum steel.

### Certification (included as standard):

1. Desuperheater general arrangement drawing.
2. Installation, operation and maintenance instructions.
3. Hydrostatic test certificate.
4. Letter of conformity.

The following certificates/documents can be supplied at an additional cost.

5. Material certificates to EN 10204 3.1 with a corresponding material location diagram.
6. NDT reports.

### Pressure/temperature limits

Spirax Sarco desuperheaters are custom products, individually designed to meet user defined process conditions.

Mechanical design pressure and mechanical design temperature limitations are stated on the desuperheater data sheet available from our online sizing software. These limits are also stated on the product nameplate.

Pressure/temperature ratings for these products will be in accordance with ASME B16.5-1996 or EN 1092-1:2007 as appropriate.

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

TI-P475-01-US 10.15

# Direct Contact Desuperheaters

## Available types

### Spray type desuperheaters

A simple type of in-line desuperheater with cooling water injected into the centre of the unit via an atomizing nozzle sprayed in the direction of the steam flow. **Spirax Sarco spray type desuperheaters are available in two options:-**

#### 1. Spray nozzle desuperheater (SND)

The assembly is designed for mounting on a suitable flanged branch on the steam pipework. A thermal sleeve installed downstream of the unit is recommended.

Simple spray nozzle type desuperheater

### Applications:

- Relatively constant load handling duties.
- Retrofitting a desuperheater to an existing steam line.
- Large steam lines where an STD could be cost prohibitive.

### Mechanical design temperature and flange rating

<700°F (<374°C)	ASME 150, ASME 300, ASME 600, ASME 900, ASME 1500 + PN16, PN25, PN40, PN63 and PN100 Slip-on
700 - 800°F (374 - 425°C)	ASME 150, ASME 300, ASME 600, ASME 900, ASME 1500 + PN16, PN25, PN40, PN63 and PN100 Weld neck
795 - 1094°F (375 - 590°C)	ASME 150, ASME 300, ASME 600, ASME 900, ASME 1500 Weld neck (Slip-on N/A)

### Materials

Component	Mechanical design temperature up to and including 800°F (425°C)	Mechanical design temperature above 800°F (425°C) up to and including 1094°F (590°C)

Spray nozzle	ASTM A182 F316L	ASTM A182 F11
Nozzle holder	ASTM A350 LF2N	ASTM A182 F11

# Direct Contact Desuperheaters

## 2. Spray type desuperheater (STD)

A complete Desuperheater ready for installation, including spray nozzle, nozzle housing, thermal sleeve and flanged shell.

### Applications:

- Relatively constant load handling duties.
- Dumping steam application.
- Control of downstream temperature not critical.

### Mechanical design temperature and flange rating

<700°F (<374°C)	ASME 150, ASME 300, ASME 600 + PN16, PN25, PN40 Slip-on (Weld neck optional)
700 - 977°F (374 - 525°C)	ASME 150, ASME 300, ASME 600 + PN16, PN25, PN40 Weld neck (Slip-on N/A)
705 - 1094°F (375 - 590°C)	ASME 150, ASME 300, ASME 600, ASME 900, ASME 1500 Weld neck (Slip-on N/A)

### Materials

Thermal sleeve	ASTM A312 TP316L	ASTM A335 P11

# Direct Contact Desuperheaters

## Venturi type desuperheaters (VTD)

The venturi principle is used to create regions of high velocity and turbulence which produces intimate contact between the steam and cooling water.

### Application

- Suitable for most general plant applications, except where high turndowns on cooling water are required.
- Flow turndowns between 3:1 and 10:1 depending on conditions.

### Mechanical design temperature and flange rating

<b>&lt; 700 ° F (&lt;374°C)</b>	ASME 150, ASME 300, ASME 600 + PN16, PN25, PN40 Slip-on (Weld neck optional)

# Direct Contact Desuperheaters

## Steam atomizing desuperheaters (SAD)

A high pressure auxiliary steam supply is used to atomize the incoming water within the diffuser of the unit.

The auxiliary steam pressure needs to be at least 1.5 times the desuperheater inlet pressure with a minimum pressure of 45 psig (3 bar g).

### Application

- High turndown applications where auxiliary steam is available, eg ;combined pressure reducing/desuperheating stations.

### Mechanical design temperature and flange rating

# Direct Contact Desuperheaters

## Sizing and selection

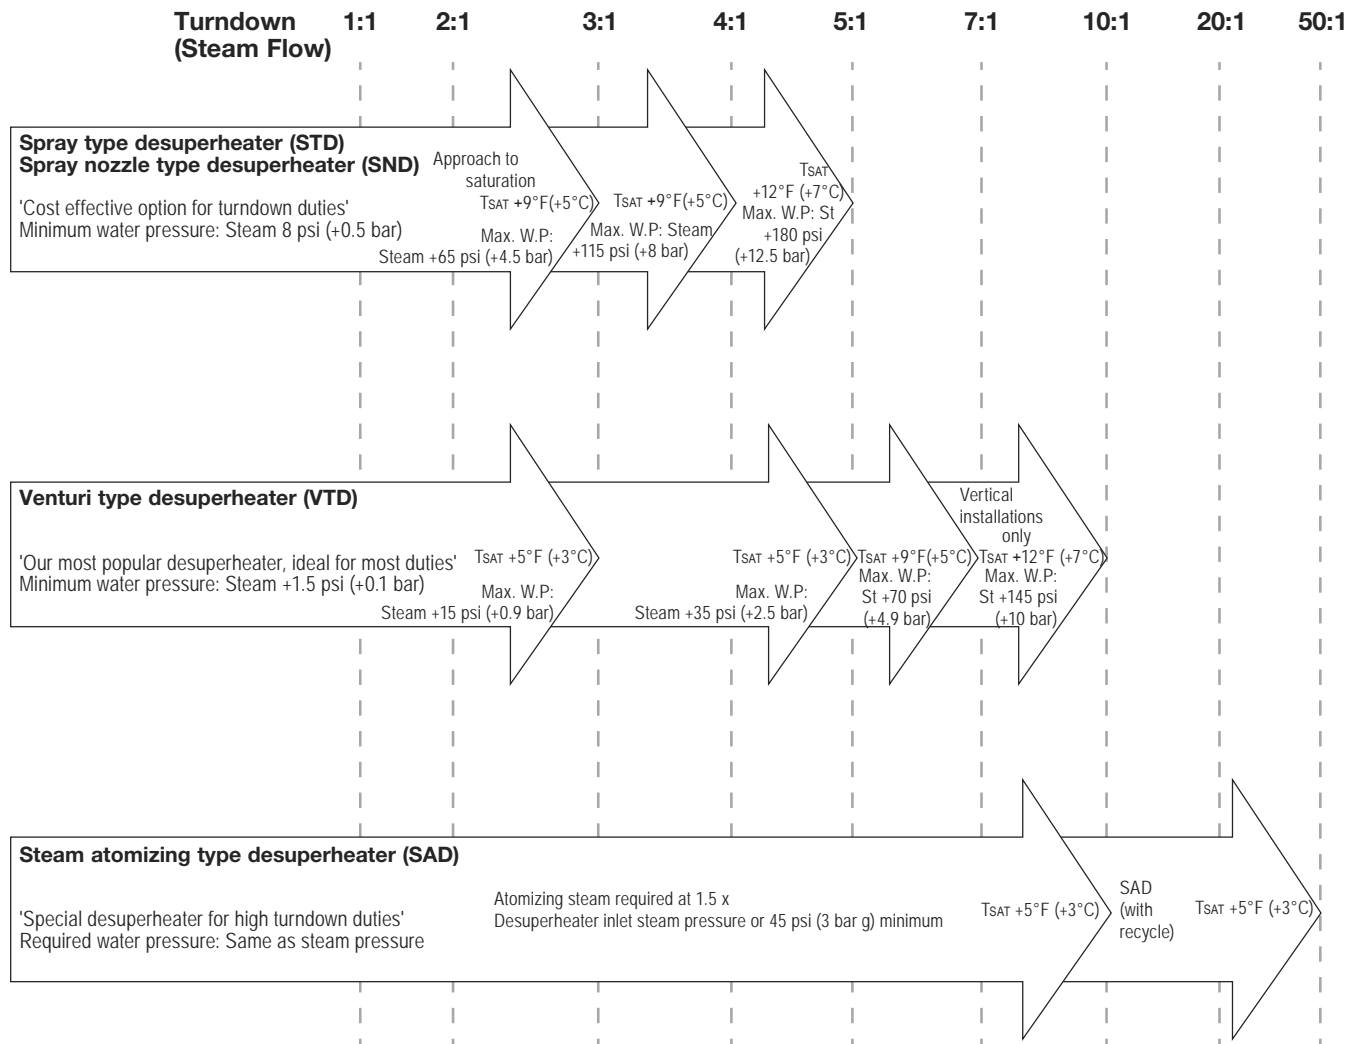

There are a number of factors which must be considered in determining the best type of desuperheater for the job. Such factors are:-

1. Residual superheat.
2. Turndown.
3. Accuracy of final temperature.
4. Available pressure drop.
5. Cooling water pressure.
6. Auxiliary higher pressure steam available for atomizing.
7. Cost.

With so many factors, it is not an easy task to develop a decision tree to aid selection, but the charts below have been developed to assist engineers in desuperheater selection.

Please read this first chart in conjunction with the note at the bottom of the page.

## Desuperheater selection chart

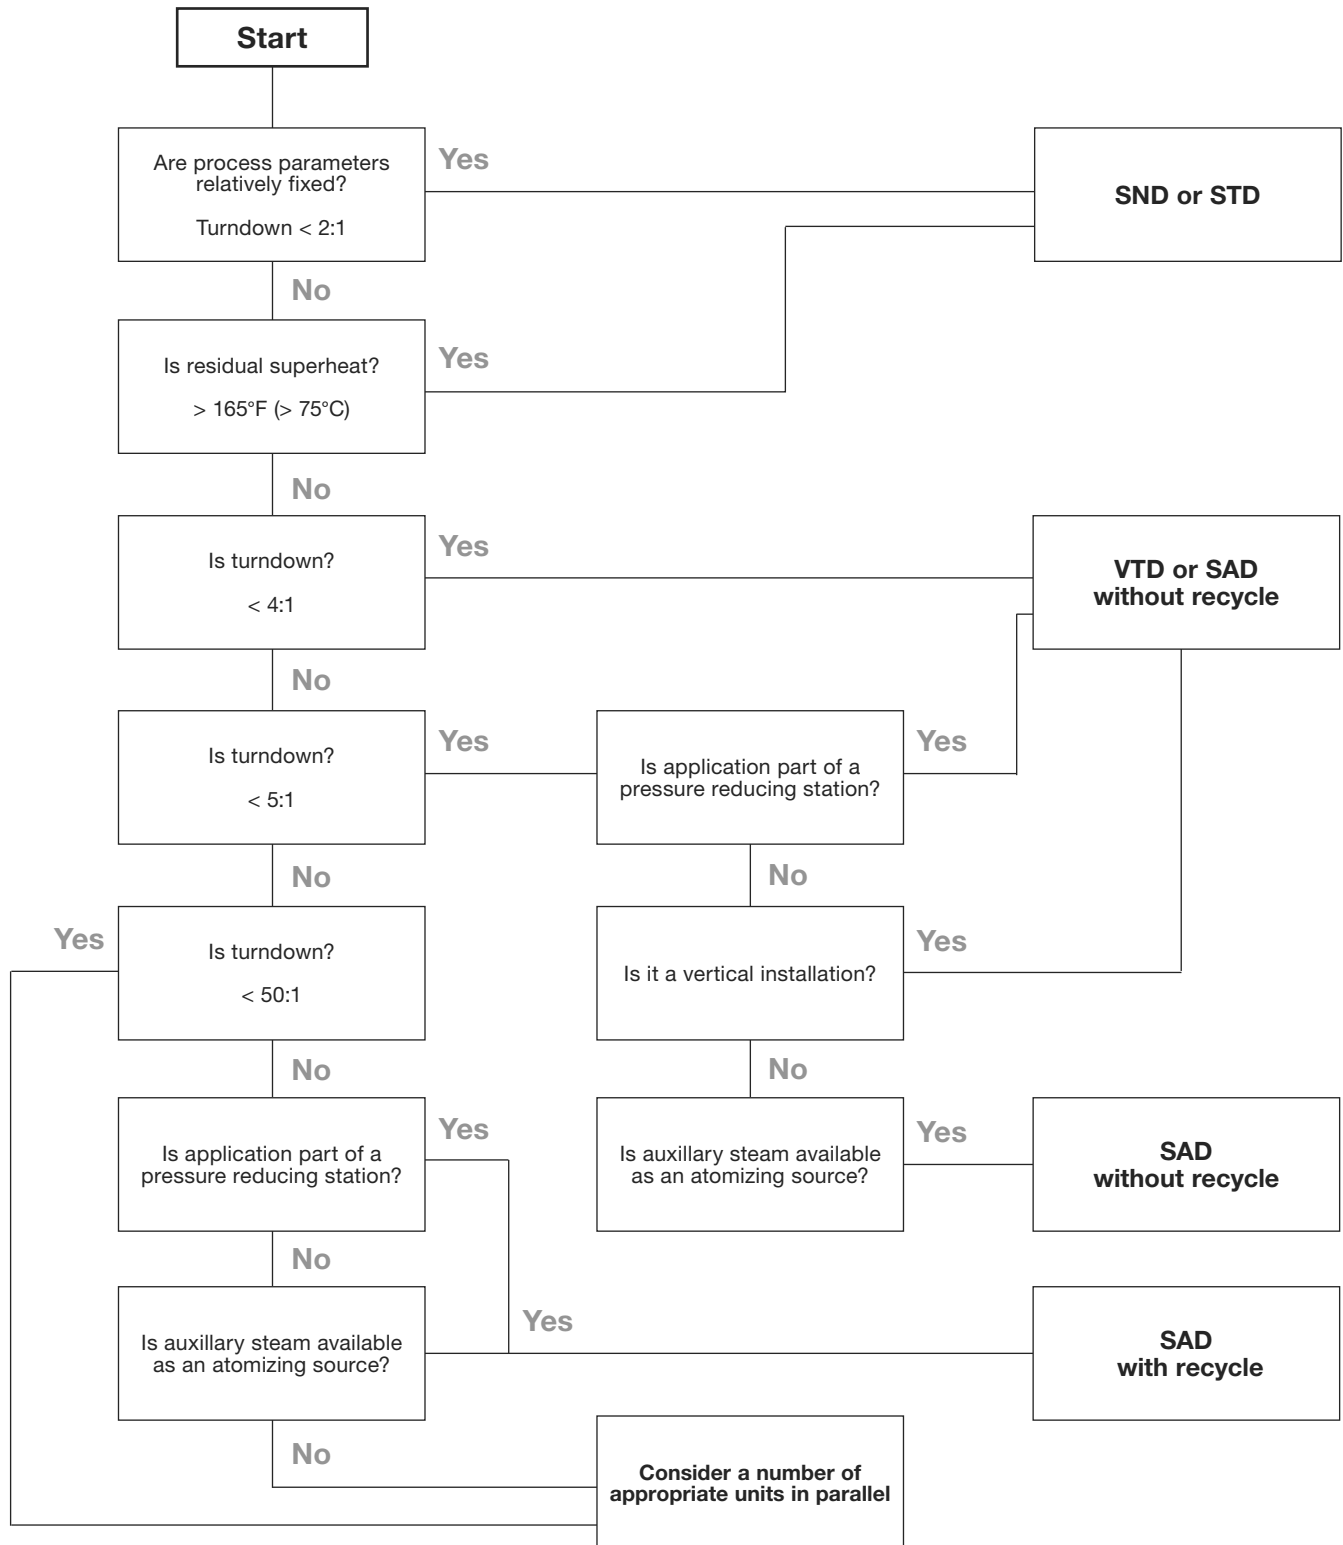

**Note:** For VTD's, turndowns above 7:1 must not be offered until design checks have been made by Spirax Sarco.

# Direct Contact Desuperheaters

## Which desuperheater is right for my application?

This is a general guide and does not represent every option available. Please contact us if you have any queries regarding selection for your specific application.

### Sizing and selection software

It is necessary to use our online sizing and selection software so that the desuperheater can be correctly specified and ordered. The software will generate a desuperheater data sheet and general assembly detail drawing of the resulting product. Please refer to TI-P475-06-US 'Desuperheater Online Programme Sizing Guidance' for further information.

# Direct Contact Desuperheaters

## Safety information, installation and maintenance

For full details see the Installation and Maintenance Instruction that are supplied with the product.

### Installation note

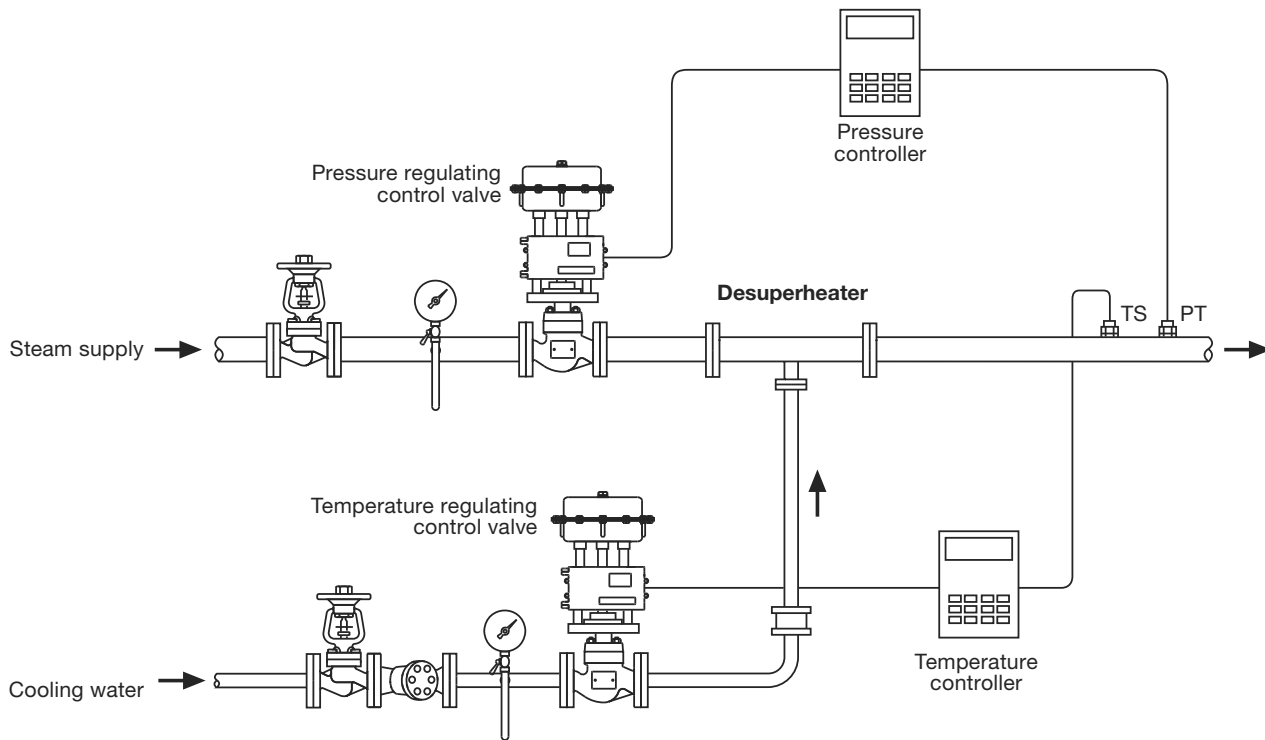

Desuperheaters may be installed either horizontally or vertically with the steam flowing upwards. Spirax Sarco strongly advises against installations in which the steam flow is vertically downwards.

In the case of a horizontal installation the cooling water connection (and the atomizing steam connection on a steam atomizing desuperheater) should ideally point downwards, as this gives the best orientation for drainage of fluids in a shutdown situation. Other orientations are acceptable for satisfactory operation, but drainage is not as effective.

In a vertical installation we recommend that, the cooling water pipework (and atomizing steam pipework, if applicable) should be brought to the Desuperheater from below the corresponding connections on the desuperheater. This will provide the best layout for drainage of fluids on shutdown.

## Desuperheating and pressure reducing stations

Spirax Sarco can provide complete desuperheating and pressure reducing stations including control valves, temperature sensors, pressure transmitters, instrumentation and pipework, all mounted on a support skid.

Combined desuperheating and pressure reducing station for venturi and spray type desuperheaters

# Direct Contact Desuperheaters

## Sizes

Spirax Sarco desuperheaters are specified by their nominal inlet and outlet size in inches. For example a 3" (80 mm) connection is referred to as Size 3, a 10" (250 mm) would be Size 10.

## Dimensions and weights

Please refer to the general assembly detail drawing generated by the sizing and selection software for details of specific desuperheaters.

## Selection guide

<b>Desuperheater type</b>	STD, SND, VTD and SAD	<b>Example</b>
<b>Steam inlet / outlet size, inches (mm)</b>	¾" - 18" (20 mm - 450 mm)	<b>VTD</b>
<b>Shell / pipe material</b>	CS - Carbon steel A106 Grade B. For VTD sizes 1 to 2, CS = A350 LF2N material CM - Chrome molybdenum A182 F11	<b>3" (080)</b>
<b>Steam end connections</b>	ASME 150, ASME 300, ASME 600, ASME 900, ASME 1500 PN16, PN25, PN40, PN63 and PN100	<b>CS</b>
		<b>ASME 600</b>

## How to order

1 off Spirax Sarco Size 3 desuperheater model VTD080CS having ASME 600 RF slip-on flanged connections. (Attach the desuperheater Data Sheet with your order).

## Spare parts

For units with fixed internals, spare parts are not available.

Spare parts and internal diffuser removal tools are available for units fitted with removable internals.

For guidance ;

For VTD units 2" or smaller the internals are fixed

For VTD units 12" or larger the internals are fixed

For VTD units between 3" and 10" the internals are removable

All STD units have fixed cooling water branch and nozzle

Removable STD internals available as an 'optional extra'

All SAD units have removable internals

Please quote the equipment model number and serial number from the nameplate when requesting parts.

## Desuperheater Online Program Sizing Guidance

### Desuperheater overview

In typical process plants, process steam is usually superheated, or heated to a temperature above saturation. The difference between the saturation temperature and the actual temperature of the steam is called 'superheat'.

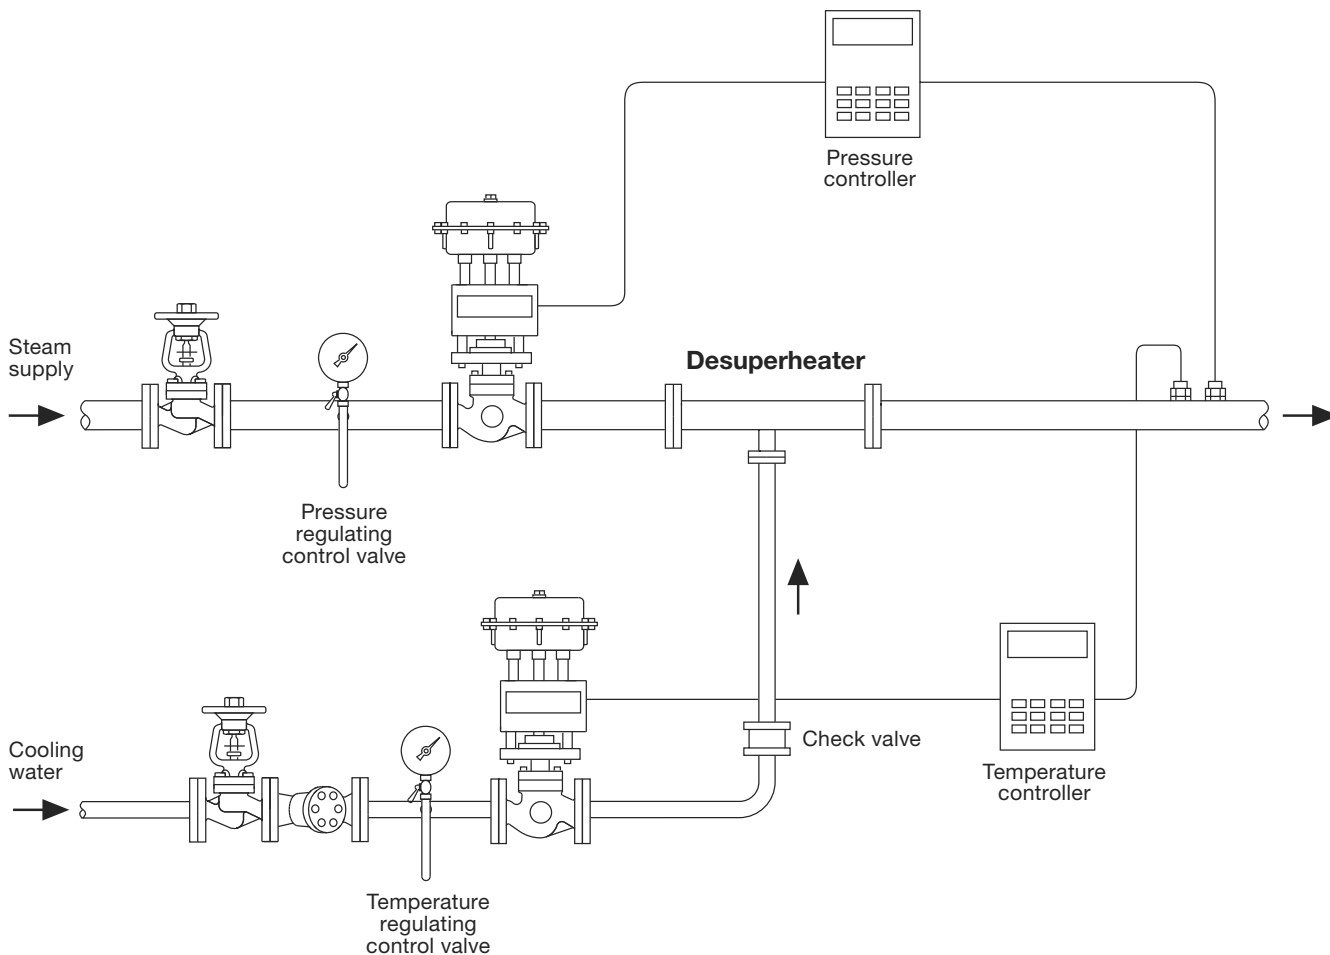

Desuperheated steam is more efficient in the transfer of thermal energy, consequently desuperheaters are used to bring the outlet degree of superheat closer to that of saturation.

Desuperheaters reduce the temperature of superheated process steam by introducing finely atomized cooling water droplets into the steam flow. As the droplets evaporate, sensible heat from the superheated steam is converted into latent heat of vaporization.

A typical desuperheater installation is shown below:

### Combined pressure reducing / desuperheating station for venturi and spray type desuperheaters

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

# Desuperheater Online Program Sizing Guidance

## Desuperheater selection

There are various types of desuperheater available so evaluation of the process duty is crucial to ensure selection of the right equipment. Turndown capability, pressure drop and outlet superheat play lead roles in desuperheater design and selection:

### **Turndown: (Maximum steam flowrate ÷ Minimum steam flowrate)**

Turndown represents the variability of the steam flowrate. For many processes, turndown is very small or fixed. Generally, the higher the turndown, the more complicated the Desuperheater design.

### **Outlet superheat:**

Although desuperheaters are capable of desuperheating to the saturation temperature of the steam, typically, desuperheaters are designed to produce steam temperatures at 5°F to 9°F (3°C to 5°C) above saturation. This is because it becomes increasingly difficult to control the process (and there is very little advantage) at lower temperatures.

### **Steam pressure drop (for venturi type desuperheaters):**

For most pressure systems, a 6 to 10 psig (0.4 to 0.7 bar g) drop is considered reasonable. It should be noted that as the required turndown increases, so does the pressure drop. This is because there is a minimum acceptable pressure drop at the minimum flowrate case that ensures sufficient velocity to atomize the water droplets. Therefore, as the maximum steam flowrate increases, so does the velocity and hence the maximum pressure drop.

### **Water pressure drop (for spray type desuperheaters):**

It should be noted that as the required turndown increases, the required cooling water pressure also increases.

#### **General 'Rule-of-thumb':**

Over-specifying the thermal load or process requirements is detrimental to efficient operation and will increase the cost of the desuperheater (and its controls). Under specifying the operating range can result in a unit that cannot handle all operating cases.

Each type of Spirax Sarco desuperheater, employs a different method to create water droplets. The process by which the water droplets are created is usually referred to as 'atomization'.

It must be remembered that the evaporation of the water droplets (and hence cooling of the steam) is a time dependent process and does not occur instantaneously. Consequently, most of the desuperheating does not occur in the desuperheater itself, but in the pipework immediately downstream. Therefore, the design of the downstream pipework is a crucial factor in a successful desuperheater installation.

It is important that the water droplets remain suspended in the downstream pipework for as long as possible. To ensure this, it is necessary to maintain sufficient turbulence in the downstream piping by keeping the velocity relatively high – higher than is usually encountered in steam distribution systems up to 200 ft/sec (60 m/s). This is the reason why desuperheaters and their associated pipework are often (not always) smaller than the distribution system in which they are being installed.

# Desuperheater

## Online Program Sizing Guidance

### Types of desuperheater

From the preceding paragraphs, it is easy to understand why there has to be a period of good contact between the droplets of cooling water and the superheated steam. If good contact is lost, the water can no longer absorb heat effectively from the steam, evaporation stops and the desuperheating process comes to a halt.

When the steam velocity is too low, 'water droplet fall-out' occurs and a pool of water is formed which runs along the bottom of pipe. At this point good contact between cooling water and the steam is lost and effective desuperheating will not occur. By following the guidelines presented in this document or using the Spirax Sarco online sizing software, problems due to droplet fall-out can be avoided.

There are three basic types of Spirax Sarco desuperheater (shown below) which all use a different method to atomize the cooling water droplets. Each one has its own merits and the desuperheater selection chart shown on the following page determines which type should be selected.

#### Complete spray type desuperheater

#### Venturi type desuperheater

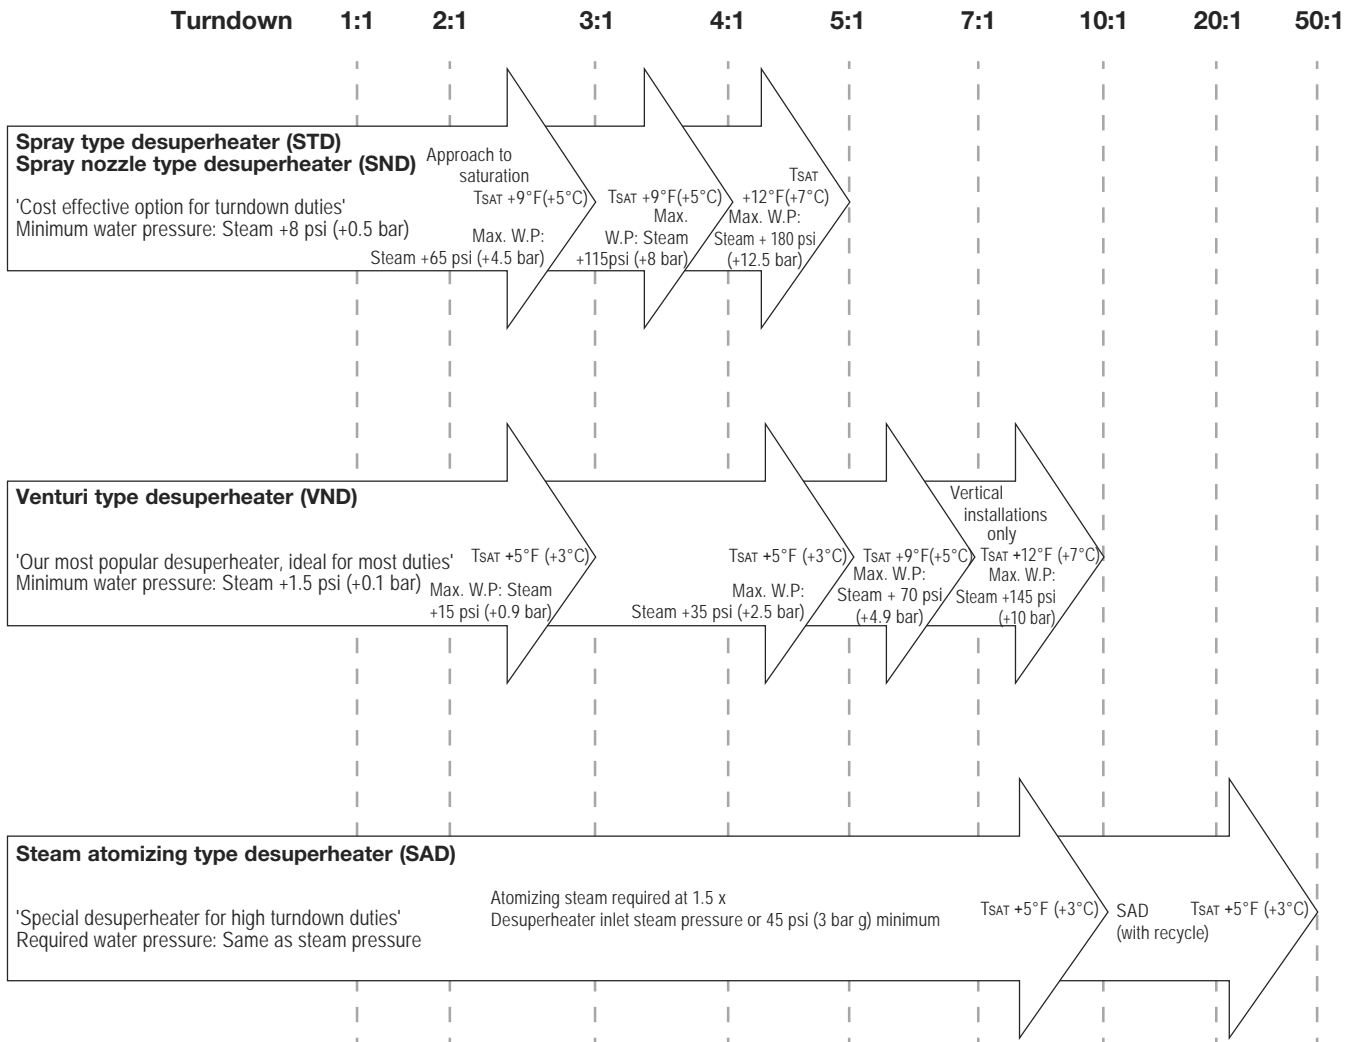

#### Steam atomizing desuperheater

Finer droplets, therefore smaller absorption length and / or better turndown and approach to saturation

# Desuperheater Online Program Sizing Guidance

## Desuperheater selection chart

## Other considerations

### Desuperheater orientation

Desuperheaters may be installed either horizontally or vertically (with the steam flowing upwards). In a vertical installation, increased turndown can be achieved; as the steam and water are countered by gravity, the water is less likely to fall out of suspension. Spirax Sarco strongly advises against installations in which the steam flow is vertically downwards, as the opposite would occur.

In the case of a horizontal installation, the cooling water connection and the atomizing steam connection on a SAD (steam atomizing desuperheater) should ideally point downwards, as this gives the best orientation for drainage of fluids in a shutdown situation. Other orientations are acceptable for satisfactory operation, but drainage is not as effective.

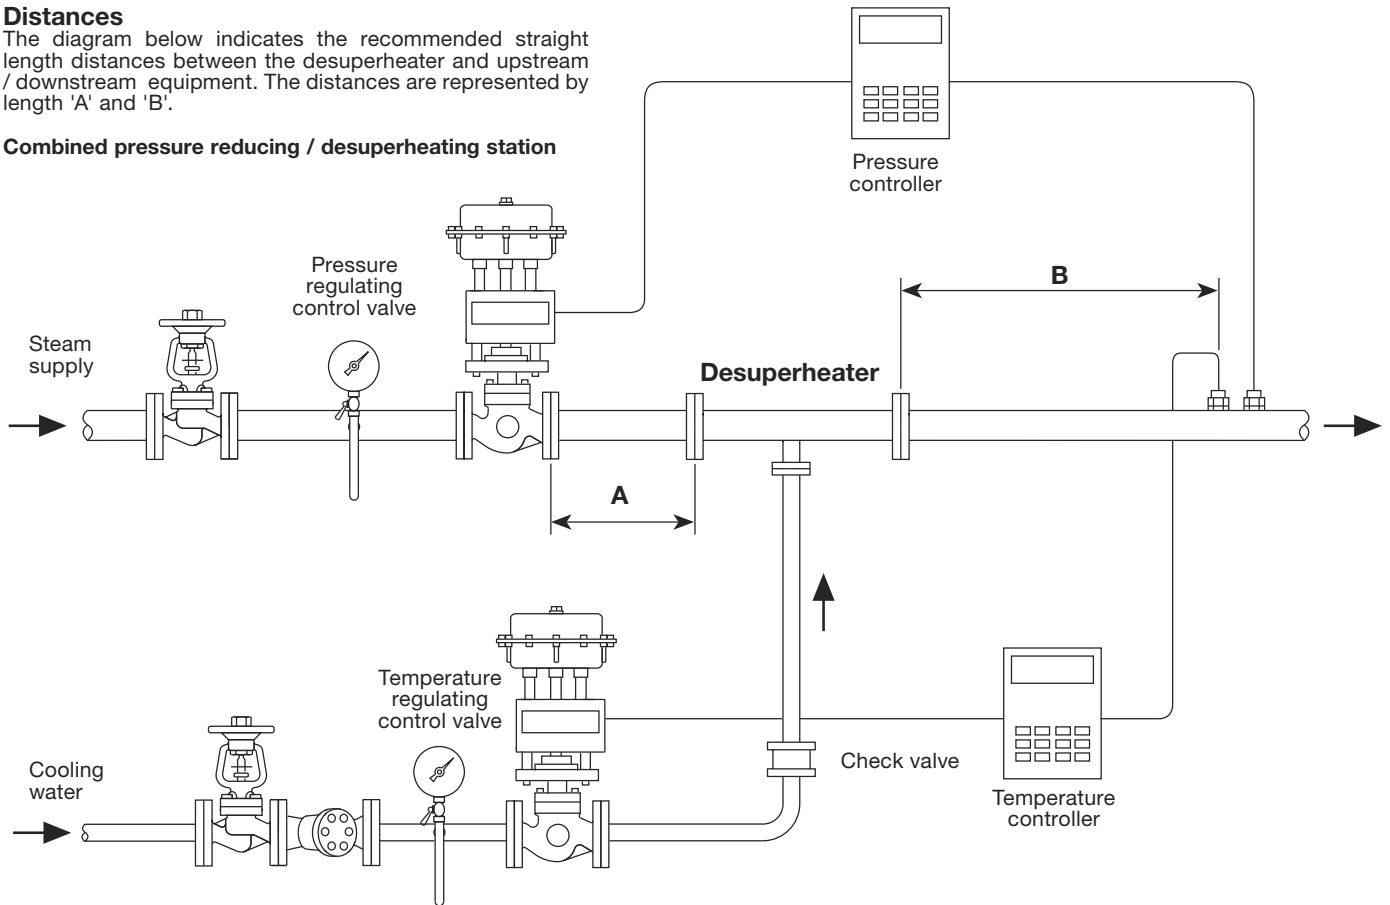

In a vertical installation we recommend that, the cooling water pipework (and atomizing steam pipework, if applicable) should be brought to the desuperheater from below the corresponding connections on the desuperheater. This will provide the best layout for drainage of fluids on shutdown.

## Distances

The diagram below indicates the recommended straight length distances between the desuperheater and upstream / downstream equipment. The distances are represented by length 'A' and 'B'.

### Combined pressure reducing / desuperheating station

### Recommended distances for location of pressure and temperature sensors and equipment:

'The greater the residual superheat, the faster the water droplets are absorbed'

# Desuperheater

## Online Program Sizing Guidance

### Other considerations (continued)

#### Cooling water supply

Typical cooling water supply options are as follows:

- Boiler feedwater (BFW) (taken from the pressure side of the boiler feedpump).
- Demineralized water.
- De-ionized water.
- Condensate.

Town's water or process water may also be used, but depending on hardness, salts may be deposited on the inside of downstream pipework and the face of valve seats and plugs.

#### Cooling water quality

The quality of the injected water is important. The TDS (Total Dissolved Solids) of the injection water should be as low as possible since all these solids will come out of solution and be deposited on the faces of valves and could block up the small orifices in the desuperheater nozzles.

#### Cooling water temperature

Generally, the hotter the better. This is because hot droplets need to absorb less heat to reach their flash temperature than cold ones. Hence, hot droplets will evaporate more quickly, producing a more efficient desuperheating process. Using hot water also has the additional advantage that smaller amounts of water will fall onto the inside walls of the pipework.

Because of the benefits of using hot water, it is logical to insulate the water supply pipes to minimize heat loss.

#### Cooling water pressure and flowrate

In order to inject the cooling water, its pressure at the desuperheater nozzle must be equal to or greater than the operating steam pressure in the pipe. The requirement varies from one type of desuperheater to another, but typical minimum values are:

- Spray type desuperheater steam pressure +8 psi (+ 0.5 bar)
- Venturi type desuperheater steam pressure +1.5 psi (+ 0.1 bar)
- Steam atomizing type desuperheater equal to steam pressure

For the spray and Venturi type desuperheaters, the highest water inlet pressure required will be at the highest cooling water flowrate.

It should be noted that the water flowrate is a function of the square of the pressure difference between cooling water and the steam. So if the water flowrate is to be increased by a factor of 4 for example, then the pressure difference must increase by a factor of  $4^2 = 16$ . This is the reason why it is important not to over-specify the turndown as high cooling water pressures are quickly reached (especially with spray type desuperheaters).

If an independent or booster pump is used, a recirculation loop will be required to ensure that there is always flow through the pump.

#### Cooling water control valve

A pressure drop will be required over the water control valve. We have already said that ideally the water should be as hot as possible so care is needed to ensure that flashing conditions do not exist across the control valve.

#### Superheated steam pressure control

It is desirable that a constant steam supply pressure be maintained.

The temperature of the steam after the desuperheater controls the amount of water added. The higher the temperature, the more the control valve will open and the greater the amount of water that is added. Usually the target is to reduce the steam temperature to within a small margin of saturation temperature. In virtually all applications the upstream pressure will be controlled and constant, however, if the superheated steam supply pressure is increased, the saturation temperature will also increase. The set value on the Controller will not change, and an excessive amount of water will be added as the control system tries to achieve the set temperature. This would result in very wet saturated steam with its resulting problems.

#### Control

In this document we have frequently used the term 'turndown' to describe the performance of the different types of desuperheater. However, as far as an installation is concerned, it should be remembered that the desuperheater is only one element of a desuperheating station. Obviously, if the controls that are fitted have lower turndown than the desuperheater, then the turndown of the desuperheater station will be reduced.

For example, in a particular pressure reducing / desuperheating station, the rangability of the cooling water valve may not be as high as the desuperheater. In this case it will be the rangability of the water control valve that limits the turndown of the desuperheating station.

#### Separator station

In applications where there must be no moisture present in the resulting steam (such as prior to a turbine for example) it is recommended that a separator is installed downstream of the desuperheater. This will protect downstream pipework and equipment from the effects of moisture in the event of a control system failure or abnormal operating conditions, for example at start-up.

The separator must be located after the temperature sensor thereby giving the water droplets as much time as possible to evaporate.

# Desuperheater

## Online Program Sizing Guidance

### Strainer

Spirax Sarco recommend that a strainer is incorporated in the cooling water supply line to protect both the cooling water control valve and the small bores within the desuperheater from becoming blocked.

### Isolation valves

To allow maintenance to be safely carried out, isolation valves are recommended upstream of:

- The superheated steam pressure control valve.
- The cooling water control valve.

### Safety valve

In applications involving simultaneous pressure reduction, a safety relief valve may be needed to protect both the desuperheater and downstream equipment from the effects of:

- Excess pressure in the event of pressure control system failure.
- Excess temperature in the event of temperature control system failure.

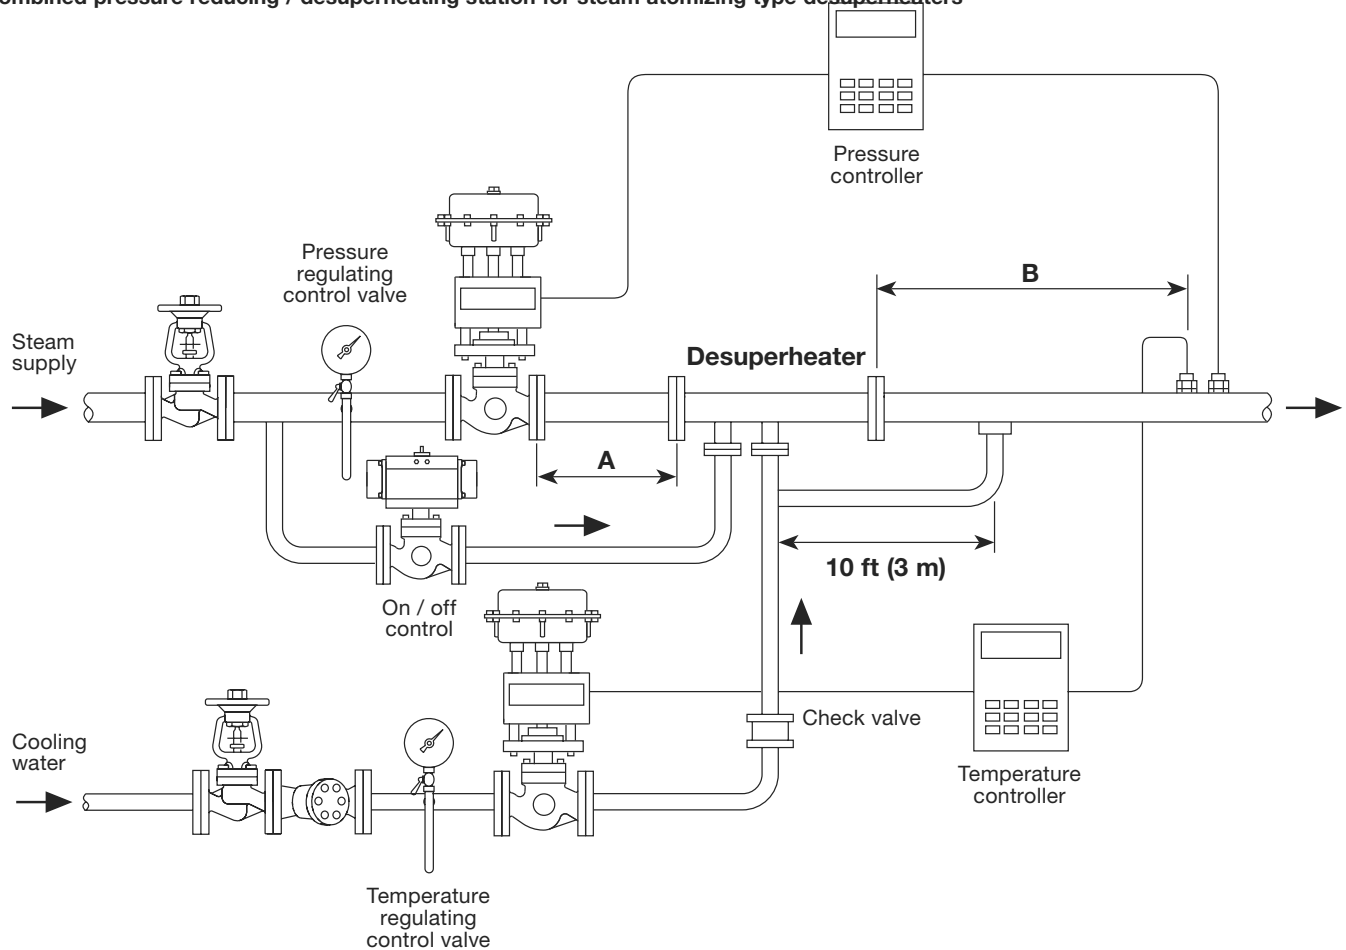

It is essential that the desuperheater and downstream equipment are suitable for the maximum temperature of the superheated steam. This is to protect these items in the event of a failure of both the pressure and temperature control systems.

### Recycle loop

For SAD steam atomizing desuperheaters with a very high turndown a 'catchpot and recycle loop' are often installed as shown on the diagram below. The recycled condensate is hot which leads to faster absorption.

The desuperheater generates a small suction effect to draw the recycle water back to the desuperheater ensuring that the water doesn't 'by-pass' the desuperheater.

### Combined pressure reducing / desuperheating station for steam atomizing type desuperheaters

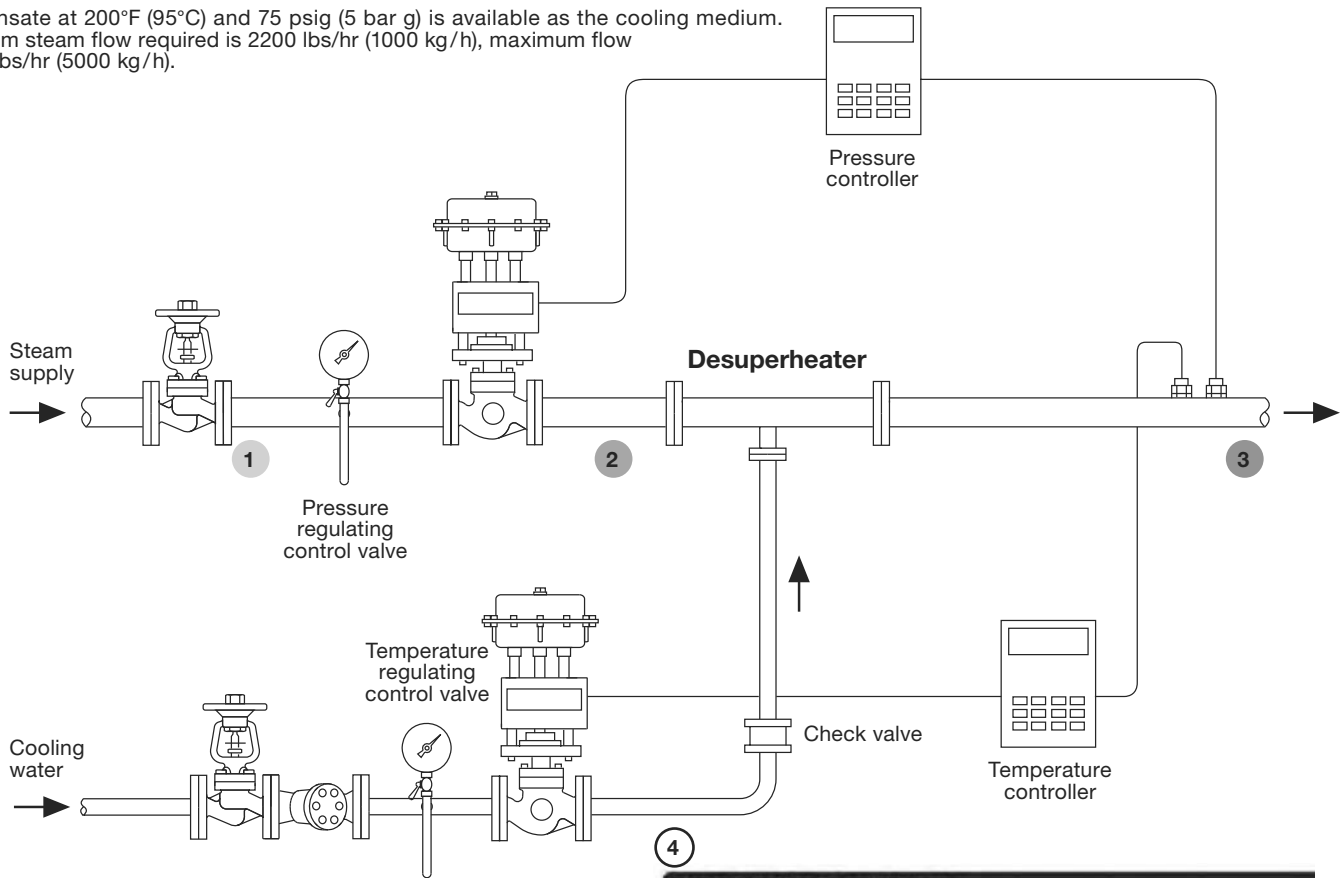

# Desuperheater Online Program Sizing Guidance

## Detailed example

Steam is required to heat a vessel jacket at 30 psig (2 bar g) and 275°F (133.7°C). A low pressure steam supply is available at 145 psig (10 bar g) and 390°F (200°C) for this purpose.

Condensate at 200°F (95°C) and 75 psig (5 bar g) is available as the cooling medium. Minimum steam flow required is 2200 lbs/hr (1000 kg/h), maximum flow 11000 lbs/hr (5000 kg/h).

## Method

As the turndown required equals 5:1 and the application involves simultaneous pressure reduction, this would seem to be a good application for a venturi type desuperheater (VTD). Please note that a steam atomizing desuperheater (SAD) could also be used for this duty, but the overall installation cost would be higher due to the greater complexity of the installation.

As already stated, it is not possible to control at the saturated temperature of the steam so any associated temperature controller should have a set point of 5°F (3°C) above the saturation temperature (which is 275°F (136.7°C) in this example).

We can use the Spirax Sarco Online Sizing Program to calculate the unit size (available at [www.spiraxsarco.com/uk](http://www.spiraxsarco.com/uk) with password). The form would be completed as follows:

The steam temperature at the inlet to the desuperheater is calculated by the program automatically and is shown on the datasheet.

Once the calculation button is pressed the software will calculate the required cooling water pressure and flowrate. It will also calculate the pressure drop across the unit. The user will see a summary screen, at which point the desired flange rating can be selected and then the 'Save & Email' button can be pressed. You will then receive an e-mail with a drawing and datasheet to your chosen e-mail address.

A Spirax Sarco Size 6 venturi type desuperheater has been selected. It can be seen from the 'Cooling Medium' section that the maximum cooling water pressure required is 35 psig (5.34 bar g) consequently a water booster pump should also be installed (as the cooling water is only available at 75 psig (5 bar g)).

The program has calculated a steam pressure drop across the desuperheater of 4.4 psig (0.302 bar g) (maximum). As there is a pressure reducing valve installed, the program has automatically added this pressure drop to the desuperheater inlet pressure to 'compensate' for the pressure drop. This will ensure that the outlet pressure from the desuperheater is 30 psig (2 bar g). The datasheet therefore shows the correct pressures and flowrates for sizing both the pressure reducing valve and the water control valve.

# Desuperheater Online Program Sizing Guidance

## Detailed example 2

Steam is required at 75 psig (5 bar g) (saturated) for use in a Shell & Tube Heat Exchanger. The Client has steam available at 75 psig (5 bar g), 660°F (350°C). Minimum steam flow is 18,750 lbs/hr (8 500 kg/h), maximum is 55,000 lbs/hr (25 000 kg/h). Boiler feedwater at 70°F(20°C) is available as the cooling medium.

### Method

As the turndown is approximately 3:1 we can select any type of Desuperheater. There are 3 options:

#### SAD - Steam atomising desuperheater

This would require atomizing steam at 110 psig (7.5 bar g) min.

#### VTD - Venturi type desuperheater

This could be selected, however, this desuperheater is not part of a pressure reducing station, consequently if we select a VTD venturi type desuperheater, the discharge steam pressure will be reduced by the pressure drop across the unit. The steam could be desuperheated to  $T_{sat} + 5^{\circ}\text{F}$  ( $+3^{\circ}\text{C}$ ).

#### STD - Spray type desuperheater

The unit is capable of handling the turndown with no steam-side pressure drop and can desuperheat to  $T_{sat} + 9^{\circ}\text{F}$  ( $+5^{\circ}\text{C}$ ).

In this case the client states that  $T_{sat} + 9^{\circ}\text{F}$  ( $+5^{\circ}\text{C}$ ) is acceptable so we will select an STD.

The Spirax Sarco Online Spray Type Desuperheater Sizing Program would be completed as shown opposite:

## Typical applications

The following is a list of applications where desuperheaters have been supplied:

### Power generation

To reduce the temperature of steam discharged from turbine bypass systems to that required for other parts of the plant.

- Turbine washing

### Process industries

In process industries, desuperheaters are used as part of a system for reducing the temperature and pressure of steam from boilers to economic levels of operation.

### Paper and board industry

- Paper drying machines

### Food industry

- Steam cooking kettles
- Evaporator heat exchanger
- Product conditioning

### Textile industry

- Fabric finishing autoclaves

### Tobacco industry

- Tobacco leaf drying plants

### Chemical and pharmaceutical industry

- Reactor heater jackets and coils
- Steam supply to process heaters

### Oil and petrochemical industry

- Vacuum distillation start-up heaters
- Steam supply to process heaters
- Let-down station and turbine bypass
- Thermocompressor discharge
- Mechanical vapour re-compression

### Brewing and distilling industry

- Steam heating system

### Boiler and turbine installations

- Power generation
- Ship building
- Coffee
- Chemical

# Flowmeters

for steam, liquids and gases.

**Our range of Flowmeters are suitable for accurate measurement of steam, liquids and gases in pipe sizes 1/2" to 80" at flowing pressures to 5,000 psig and flowing temperatures to 842°F.**

Flow Measurement

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

## Gilflo Flowmeters - 'B' Pipeline Unit

**Note:** 8", 10", 12" and 16" flowmeter incorporates an additional shaft support together with a revised spring location.

### Description

The Gilflo 'B' flowmeter is installed in the pipeline and produces a differential pressure which is related to the rate of flow. It can be used with most industrial fluids, gases and both saturated and superheated steam.

### Sizes and Pipe Connections

2", 3", 4", 6", 8", 10", 12" and 16"  
Flanges available to ANSI B.16.5 class 300

### Limiting Conditions

Minimum operating pressure	9 psig
Maximum operating pressure	740 psig
Minimum operating temperature	-58°F
Maximum operating temperature	842°F
Maximum viscosity	30 centipoise

### Turndown

The Gilflo will provide accurate measurement over a flow range of 100:1.

### Accuracy

To achieve accuracy of a  $\pm 1\%$  of reading, all Gilflo meters must be used in conjunction with a device capable of performing electronic linearism such as:

- M750 Flow Computer
- Customer's EMS, DCS or equivalent
- M800 Steam Flow Computer
- M800 Gas Flow Computer

**Note:** When used with M800 flow computers, Gilflo accuracy is  $\pm 1\%$  of reading from 5% to 100% of maximum rated flow. For flows from 1% to 5% of maximum rated flow, accuracy will be better than  $\pm 1\%$  FSD.

### Repeatability

The Gilflo is repeatable to better than 0.25%.

### Pressure Drop

Less than 140 inches H<sub>2</sub>O (349 mbar) at rated capacity

### Flow Capacity

To determine the maximum flow capacity of a Gilflo 'B', it is necessary to calculate the equivalent water flowrate ( $Q_w$ ). See under the section "Sizing the Gilflo 'B' flowmeter".

### Materials of Construction

Body	Carbon Steel	ASTM A105/A106/A234
Internals	Mostly Stainless Steel	S304/S316
Spring	Inconel X750	

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

TI-8-006-US 12.09

# Gilflo Flowmeters - 'B' Pipeline Unit

**Dimensions / Weights** (approximate) in inches and lbs

SIZE	A	B	Weight
2"	19	3.5	31
3"	21	4.5	48
4"	28	6.6	105
6"	31	8.6	191
8"	39	12.7	270
10"	57	16	565
12"	63	18	748
16"	79	24	1980

H.P. and L.P. pressure tapings are threaded 1/4" NPT (female).  
On 16" meter, the pressure tapings are on the body.

## Installation

A separate installation booklet is supplied with each Gilflo 'B' flowmeter. The following main points are given for guidance:

- The Gilflo should be installed with a minimum of 6 straight pipe diameters upstream and 3 downstream. No valves, fittings or cross sectional changes permitted within these pipe lengths. Where an increase in pipe diameter is necessary upstream of a Gilflo flowmeter, the length of straight pipe should be increased to 12 diameters. Similarly, where a Gilflo flowmeter is installed downstream of two 90° bends in two planes, a pressured reducing valve or a partially open valve, 12 pipe diameters should be allowed.
- The Gilflo flowmeter should normally be mounted horizontally. Vertical installation (with flow vertically downward) is also permissible and must be specified when ordering. Ensure flow is in the correct direction and avoid reverse flow.
- For steam applications, good basic steam engineering practice should be followed:
  - Ensure all pipework is adequately insulated.
  - Ensure correct line drainage through adequate trapping.
  - Where practicable, fit a steam separator upstream of the flowmeter. This should be drained using a float trap set.
  - Ensure good alignment and support of all associated pipework.
  - Achieve line size reduction by the use of eccentric reducers.
  - Avoid close installation (less than 25 pipe diameters) upstream or downstream of a pressure reducing valve or modulating valve.

See the "Gilflo flowmeters - system overview" TI-8-008-US which provides information of a Gilflo metering system.

size	Q <sub>e</sub> max (gpm)	15 psig	50 psig	75 psig	100 psig	150 psig	200 psig	400 psig

16"		8284	143530	207845	242744	273534	325972	371275
								516072

**Note:** These capacities are based on a differential pressure across the meter of 140 inches H<sub>2</sub>O (349 mbar).  
Minimum flow is 1% of maximum (100:1 turndown).

## Maintenance

There are no user serviceable parts within the 'Gilflo' Spool flowmeter. Mechanical checks to confirm correct operation are described in the manuals that accompanies the flowmeters.

## Sizing the Gilflo 'B' Flowmeter

- Determine Equivalent Water Flowrate (Q<sub>e</sub>) in U.S. gpm using formulas:

### Liquids:

$$Q_e = \frac{m}{500} \sqrt{\frac{D_e}{D_1}} \quad \text{or} \quad Q_e = Q_1 \sqrt{\frac{D_1}{D_e}}$$

- Q<sub>e</sub> = equivalent flow rate of water at 70°F (U.S. gpm)  
 m = maximum flow rate of service liquid (lb/hr)  
 D<sub>e</sub> = density of water at calibration (62.305 lb/ft<sup>3</sup>)  
 D<sub>1</sub> = density of service liquid (lb/ft<sup>3</sup>)  
 Q<sub>1</sub> = maximum flow rate of service liquid (US gpm)

### Gases:

$$Q_e = \sqrt{D} \times \frac{(0.0158) \times m}{P_s} \times \frac{T_s}{T_f}$$

$$\text{or} \quad Q_e = (0.948) \times Q_g \sqrt{\frac{D}{P} \times \frac{T_s}{T_f}}$$

- T<sub>s</sub> = standard absolute temperature (520°R)  
 Q<sub>e</sub> = water equivalent flow rate at 70°F (U.S. gpm)  
 m = maximum flow rate of gas (lb/hr)  
 D = gas density at 14.7 psia, 520°R (60°F) (lb/ft<sup>3</sup>)  
 P<sub>f</sub> = flowing pressure of gas (psia)  
 P<sub>s</sub> = standard atmospheric pressure (14.7 psia)  
 T<sub>s</sub> = standard absolute temperature (520°R)  
 T<sub>f</sub> = flowing temperature of gas (°R=°F + 460)  
 Q<sub>g</sub> = maximum flow rate of gas (SCFM)

### Steam:

$$Q_e = (0.0158) \times m \sqrt{v}$$

- Q<sub>e</sub> = water equivalent flow rate at 70°F (U.S. gpm)  
 m = maximum flow rate of steam (lb/hr)  
 v = specific volume of steam at normal pressure and temperature (ft<sup>3</sup>/lb)

- Select from the table below the meter with a Q<sub>e</sub> max. that most closely matches (but exceeds) the application Q<sub>e</sub> determined in step 1.

**Note:** These equivalent water flowrates are based on a differential pressure of 140 inches H<sub>2</sub>O (349 mbar). For saturated steam flow measurement, the table below gives flow capacities in lb/h.

## How To Order

TI-8-006-US 12.09

Flow  
Measurement

## Gilflo Flowmeters - System Overview

### Description

The Gilflo flowmetering system consists of 2 major parts:-

1. The Gilflo pipeline unit. This may be a Gilflo 'B' or 'Spool' design. This is installed in the line where the flow is to be measured. Using impulse pipework, this is connected to:-
2. The M610 DP Transmitter Assembly. This measures the differential pressure across the Gilflo pipeline unit and converts it to a 4-20 mA output signal. This output signal can be used in a number of ways:-
  - a- To drive a suitable chart recorder or act as an input to an EMS/DCS. This gives a non-compensated signal proportional to rate of flow.
  - b- To supply an M750 Display Unit. This gives a non-compensated display of totalized flow and rate of flow.
  - c- To supply an M800 series Flow Computer, whose keypad allows the user to select the parameters to be viewed as well as allowing access to the numerous facilities available. The diagram shows these configurations.

**Note:-** The Gilflo pipeline unit can be used to measure the flow of most industrial liquids, gases and vapors within the pressure and temperature limits detailed in the TIS's. Full density compensation from pressure and temperature transmitters is available when using the M800 series Flow Computer for steam applications or the M800 Series Flow Computer for gas applications. See TIS's for details.

### Installation

Care must be taken to meet all the requirements of the Installation and Maintenance Instructions that are included with the equipment.

#### Installation points to watch:-

1. Ensure all pipework is adequately supported and properly aligned.
2. The Gilflo pipeline unit should be selected on capacity rather than line size. Where pipe size reduction on steam systems is necessary, use eccentric reducers to avoid waterlogging.
3. The minimum recommended lengths of straight pipe are 6D upstream and 3D downstream.
4. Take care to ensure the correct direction of flow as indicated by the arrow on the meter body.
5. Take precautions to avoid reverse flow through the meter.
6. Avoid installing the meter downstream of a pressure reducing valve (especially on steam systems) as this may cause inaccuracies and/or possible damage. Similarly avoid installing the meter downstream of a partially open valve.
7. Remember that actuated valves may cause rapid pressure fluctuations which could cause damage.
8. On steam or liquid systems take care to ensure that all impulse lines remain full to prevent damage to the DP transmitter through contact with steam or high temperature liquid.
9. For steam applications, care should be taken to ensure adequate line drainage, trapping etc., so as to avoid condensate slugs impacting the meter. Where practical, steam separators should be fitted. These should be drained using a float trap set.
10. For gas applications ensure that the DP cell and impulse lines are positioned above the pipework. Also ensure that the impulse lines allow free drainage of moisture away from the DP cell and back into the pipeline.

### Electrical wiring

All electrical wiring must be carried out to the appropriate standards. Full wiring interconnection details are included with the equipment.

### How to specify

For details of how to specify each part of your chosen system refer to individual TIS's listed in the Associated Equipment section.

### Associated Equipment

# Gilflo ILVA Flowmeters

## Description

The Gilflo ILVA flowmeter operates on the spring loaded variable area principle and produces a differential pressure related to the rate of flow. It can be used with both saturated and superheated steam, gases and most industrial fluids.

## Limiting Conditions

The maximum pressure and temperature limitations are the same as the specified flange ratings with an overall maximum temperature of 842°F. Minimum operating temperature -58°F. Minimum operating pressure 9 psig. Maximum viscosity 30 centipoise.

## Turndown

The Gilflo ILVA will provide accurate measurement over a flow range of 100:1.

## Accuracy

To achieve accuracy of a  $\pm 1\%$  of reading, all Gilflo ILVA meters must be used in conjunction with a device capable of performing electronic linearism such as:

- M750 Flow Computer
- Customer's EMS, DCS or equivalent
- M800 Steam Flow Computer
- M800 Gas Flow Computer

Note: When used with M800 flow computers, Gilflo ILVA accuracy is  $\pm 1\%$  of reading from 5% to 100% of maximum rated flow. For flows from 1% to 5% of maximum rated flow, accuracy will be better than  $\pm 1\%$  FSD.

## Repeatability

The Gilflo ILVA is repeatable to better than 0.25%.

## Pressure Drop

The pressure drop across the Gilflo ILVA pipeline unit is 200 inches water gauge at maximum rated flow.

## Flow Capacity

To determine the capacity of the Gilflo ILVA for different fluids, it is necessary to calculate the Equivalent Water Flowrate  $Q_e$  (in U.S. gpm) as described under the section "sizing the Gilflo ILVA" then selecting the appropriate size of meter from the table.

## Construction Materials

Body	Stainless Steel S.316
Internals	431 S29/S303/S304/S316
Spring	Inconel X750 or equivalent

## Sizes and Pipe Connections

2", 3", 4", 6", and 8"

Suitable for fitting between the following flanges  
ANSI B 16.5 class 150, 300, 600.

## How to Specify

6" Gilflo ILVA flowmeter for installation between ANSI 150 flanges. Body material 316 stainless steel. Flow medium saturated steam at 150 psig, maximum flow 20,000 lb/h.

For a general description of the Gilflo ILVA metering system, see TIS 8.010 which also gives details of associated equipment.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

Flow Measurement

# Gilflo ILVA Flowmeters

## Dimensions (approximate) in inches and lbs.

Size	A	B	C	D	E	Weight (lb)
2"	1.38	2.48	5.51	4.06	.69	4.4
3"	1.77	3.07	5.91	5.43	.89	8.6
4"	2.36	4.06	8.07	6.38	1.48	18.3
6"	2.95	5.28	11.81	8.58	1.48	31.3
8"	3.35	6.34	14.17	10.75	1.67	52.0

Note: Pressure tappings are threaded 1/4" NPT

## Installation

A separate installation booklet is supplied with each Gilflo ILVA flowmeter. The following main points are given here for guidance:

1. The Gilflo ILVA should be mounted with a minimum of 6 straight pipe diameters upstream and 3 downstream. No valves, fittings or cross sectional changes are permitted within these pipe lengths. Where an increase in nominal pipe diameter is required upstream of the meter, the length of straight pipe should be increased to 12 diameters. Similarly, where a Gilflo ILVA is installed downstream of two 90 degree bends in two planes, a pressure reducing valve or a partially open valve, 12 upstream pipe diameters should be allowed.
2. Care should be taken to install the Gilflo ILVA concentrically in the line. If this is not done, flow measurement errors may occur.
3. The ILVA meter should be mounted horizontally. For vertical installations, consult your representative.
4. For steam applications, good basic steam engineering practices should be followed:  
Correct line drainage through adequate trapping.  
Good alignment and support of associated pipework.  
Line size changes achieved by the use of eccentric reducers.
5. See TIS 8.010 which provides an overview of the Gilflo ILVA metering system and further installation details.

## Maintenance

There are no user serviceable parts in the Gilflo ILVA. A visual check together with confirmation that the orifice/cone reference dimension is within tolerance is possible. Full details are included in the manual that accompanies the meter.

## Sizing the Gilflo ILVA for Saturated Steam - lb/h

Maximum flow rates in lb/h at different pressures (psig)

## Sizing the Gilflo ILVA Meter

In order to determine the flow capacity of a Gilflo ILVA pipeline unit, it is necessary to calculate the Equivalent Water Flowrate (Q<sub>e</sub>) based on the anticipated actual flow.

Figure 2 is then used to select the appropriate unit.

1. Determine Equivalent Water Flowrate (Q<sub>e</sub>) in U.S. gpm:

### Liquids:

$$Q_e = \frac{m}{500} \sqrt{\frac{D_e}{D_i}} \quad \text{or} \quad Q_e = Q_i \sqrt{\frac{D_i}{D_e}}$$

- Q<sub>e</sub> = equivalent flow rate of water at 70°F (U.S. gpm)  
 m = maximum flow rate of service liquid (lb/hr)  
 D<sub>e</sub> = density of water at calibration (62.305 lb/ft<sup>3</sup>)  
 D<sub>i</sub> = density of service liquid (lb/ft<sup>3</sup>)  
 Q<sub>i</sub> = maximum flow rate of service liquid (US gpm)

### Gases:

$$Q_e = \sqrt{D} \times \frac{(0.0158) \times m}{P_s} \times \frac{T_s}{T_f}$$

$$\text{or } Q_e = (0.948) \times Q_g \sqrt{D} \times \frac{P_s}{P_f} \times \frac{T_f}{T_s}$$

- Q<sub>e</sub> = water equivalent flow rate at 70°F (U.S. gpm)  
 m = maximum flow rate of gas (lb/hr)  
 D = gas density at 14.7 psia, 520°R (60°F) (lb/ft<sup>3</sup>)  
 P<sub>f</sub> = flowing pressure of gas (psia)  
 P<sub>s</sub> = standard atmospheric pressure (14.7 psia)  
 T<sub>s</sub> = standard absolute temperature (520°R)  
 T<sub>f</sub> = flowing temperature of gas (°R=°F + 460)  
 Q<sub>g</sub> = maximum flow rate of gas (SCFM)

### Steam:

$$Q_e = (0.0158) \times m \sqrt{v}$$

- Q<sub>e</sub> = water equivalent flow rate at 70°F (U.S. gpm)  
 m = maximum flow rate of steam (lb/hr)  
 v = specific volume of steam at normal pressure and temperature (ft<sup>3</sup>/lb)

2. Select from the table below the Gilflo ILVA meter with a maximum Q<sub>e</sub> that closely matches (but exceeds) the application Q<sub>e</sub> determined in step 1.

Meter size	Max. Q <sub>e</sub> U.S. gpm	Max. DP ins Wg
2"	40	200
3"	158	200
4"	317	200
6"	781	200

Flow  
Measurement

## Gilflo ILVA Flowmeter 10" and 12"

### Description

The Gilflo ILVA flowmeter operates on the spring loaded variable area principle and produces a differential pressure related to the rate of flow. It can be used with most industrial fluids, gases and both saturated and superheated steam. A general description of the ILVA flowmetering system and its associated equipment is given in a separate TI sheet.

### Sizes and pipe connections

10" and 12"

Suitable for fitting between the following flanges:

EN 1092 PN16, PN25 and PN40.

ASME (ANSI) B 16.5 Class 150, 300 and 600.

JIS 20.

KS 20.

The Gilflo ILVA flowmeter should be installed in pipework manufactured to BS 1600 or ASME (ANSI) B 36.10 Schedule 40. For different pipe standards/schedules, downstream spool pieces with an equivalent internal diameter to BS 1600 or ASME (ANSI) B 36.10 Schedule 40 should be used. If this is not possible, please contact Spirax Sarco Limited.

### Materials

Part	Material
Body	Cast stainless steel S.316 (CF8M/1.4408)
Internals	431 S29/S303/S304/S316
Spring	Inconel X750

### Pressure/temperature limits

The product **must not** be used in this region.

Body design conditions	ASME (ANSI) 600
PMA Maximum allowable pressure	1450 psig @ 120°F
TMA Maximum allowable temperature	750°F @ 1000 psig
Minimum allowable temperature	-20°F
PMO Maximum operating pressure is dependant on the flange specification	
Minimum operating pressure	9 psig
TMO Maximum operating temperature	750°F @ 1000 psig
Minimum operating temperature	-20°F
<b>Note:</b> For lower operating temperatures consult Spirax Sarco	
Maximum viscosity	30 centipoise
ΔPMX Maximum differential pressure	200 in
Designed for a maximum cold hydraulic test pressure of	2248 psig

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

### Performance

The Gilflo ILVA is used in conjunction with linearising electronics such as the M800 flow computer or M750 display unit. Alternatively the output signal linearisation can be performed on an EMS/BEMS or equivalent.

Accuracy when used with M800 or M750:

±1% of measured value from 5% to 100% of maximum rated flow.

±0.1% FSD from 1% to 5% of maximum rated flow.

Repeatability better than 0.25%

Turndown: up to 100:1

**Caution:** The steam mass flow transmitters are uniquely configured at the factory to work with a single, specific Gilflo ILVA flowmeter. For correct operation the configured transmitter must always be installed with its allocated flowmeter. Labels on the packaging give the serial numbers of the matched products.

### Pressure drop

The maximum pressure drop across the Gilflo ILVA pipeline unit is 498 m bar (200 ins water gauge) at maximum rated flow.

### Flow capacity

To determine the capacity of the Gilflo ILVA for different fluids, it is necessary to calculate the equivalent water flowrate  $Q_E$  (in l/min) as described in Step 1, under the section 'sizing the Gilflo ILVA' then selecting the appropriate size of flowmeter from the Table under Step 2 overleaf.

### How to order

Spirax Sarco 10" Gilflo ILVA flowmeter for installation between ANSI Class 300 flanges. The body material is to be 316 stainless steel. The flow medium will be saturated steam at 145 psig and the maximum flow will be 61,730 lbs/hr. For a general description of the Gilflo ILVA metering system, see TI-8-010-US which also gives details of associated equipment.

TI-P337-46-US 07.10

Size	A	B	C	D	E	F	Weight
10"	4.1	8	17.5	13	1.4	1.4	91.5
12"	4.7	9.8	20.9	15.2	1.7	1.4	147.7

**Note:-** Pressure tappings are threaded 1/4" NPT

### Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions supplied with the product.

#### Installation note:

The following main points are given here for guidance:

- The Gilflo ILVA should be mounted with a minimum of 6 straight pipe diameters upstream and 3 downstream. No valves, fittings or cross sectional changes are permitted within these pipe lengths. Where an increase in nominal pipe diameter is required upstream of the flowmeter, the length of straight pipe should be increased to 12 diameters. Similarly, where a Gilflo ILVA is installed downstream of two 90 degree bends in two planes, a pressure reducing valve or a partially open valve, 12 upstream pipe diameters should be allowed.
- It is important that the internal upstream and downstream diameters of pipe are smooth. Ideally seamless pipes should be used. It is recommended that slip-on flanges be used to avoid any intrusive weld beads on the internal diameter of the pipe.
- Care should be taken to install the Gilflo ILVA concentrically in the line. If this is not done, flow measurement errors may occur.
- The Gilflo ILVA should be mounted horizontally. For vertical installations, consult Spirax Sarco.
- For steam applications, good basic steam engineering practices should be followed:
  - Correct line drainage through adequate trapping.
  - Good alignment and support of associated pipework.
  - Line size changes achieved by the use of eccentric reducers.

#### Maintenance note:

There are no user serviceable parts in the Gilflo ILVA. A visual check together with confirmation that the orifice/cone reference dimension is within tolerance is possible.

### Sizing the Gilflo ILVA for saturated steam - lb/h

Maximum flowrates in lb/h at different pressures (psig)

**Note:** Maximum steam flowrates are calculated at a differential pressure across the Gilflo ILVA pipeline unit of 200 ins H2O.

Size	Steam pressure psig	15	44	73	102	145	174	218	290	363	435	580
10"	Maximum flow	33786	47675	57708	66128	76959	83379	92162	105216	116909	127654	147172
	Minimum flow	344	476	578	661	769	833	919	1052	1168	1276	1473
12"	Maximum flow	48782	67514	81723	93646	108983	118075	130514	148999	165558	114638	208414
	Minimum flow	487	675	820	939	1091	1179	1303	1490	1658	1808	2083

### Sizing the Gilflo ILVA Meter

In order to determine the flow capacity of a Gilflo ILVA pipeline unit, it is necessary to calculate the Equivalent Water Flowrate ( $Q_e$ ) based on the anticipated actual flow.

Figure 2 is then used to select the appropriate unit.

- Determine Equivalent Water Flowrate ( $Q_e$ ) in U.S. gpm:

#### Liquids:

$$Q_e = \frac{m}{500} \sqrt{\frac{D_s}{D_l}} \quad \text{or} \quad Q_e = Q_l \sqrt{\frac{D_l}{D_s}}$$

$Q_e$  = equivalent flow rate of water at 70°F (U.S. gpm)

$m$  = maximum flow rate of service liquid (lb/hr)

$D_s$  = density of water at calibration (62.305 lb/ft<sup>3</sup>)

$D_l$  = density of service liquid (lb/ft<sup>3</sup>)

$Q_l$  = maximum flow rate of service liquid (US gpm)

#### Gases:

$$Q_e = \sqrt{D} \times \frac{(0.0158) \times m}{P_s} \times \frac{T_s}{T_f}$$

$$\text{or } Q_e = (0.948) \times Q_g \sqrt{D} \times \frac{P_s}{P_f} \times \frac{T_f}{T_s}$$

$Q_e$  = water equivalent flow rate at 70°F (U.S. gpm)

$m$  = maximum flow rate of gas (lb/hr)

$D$  = gas density at 14.7 psia, 520°R (60°F) (lb/ft<sup>3</sup>)

$P_f$  = flowing pressure of gas (psia)

$P_s$  = standard atmospheric pressure (14.7 psia)

$T_s$  = standard absolute temperature (520°R)

$T_f$  = flowing temperature of gas (°R = °F + 460)

$Q_g$  = maximum flow rate of gas (SCFM)

#### Steam:

$$Q_e = (0.0158) \times m \sqrt{v}$$

$Q_e$  = water equivalent flow rate at 70°F (U.S. gpm)

$m$  = maximum flow rate of steam (lb/hr)

$v$  = specific volume of steam at normal pressure and temperature (ft<sup>3</sup>/lb)

- Select from the table below the Gilflo ILVA meter with a maximum  $Q_e$  that closely matches (but exceeds) the application  $Q_e$  determined in step 1.

Flowmeter type	Max. $Q_e$ U.S. gpm	Maximum pressure drop Ins Wg
10"	2047	200
12"	2900	200

TI-P337-46-US 07.10

## Gilflo ILVA Flowmeters System Overview

### Description

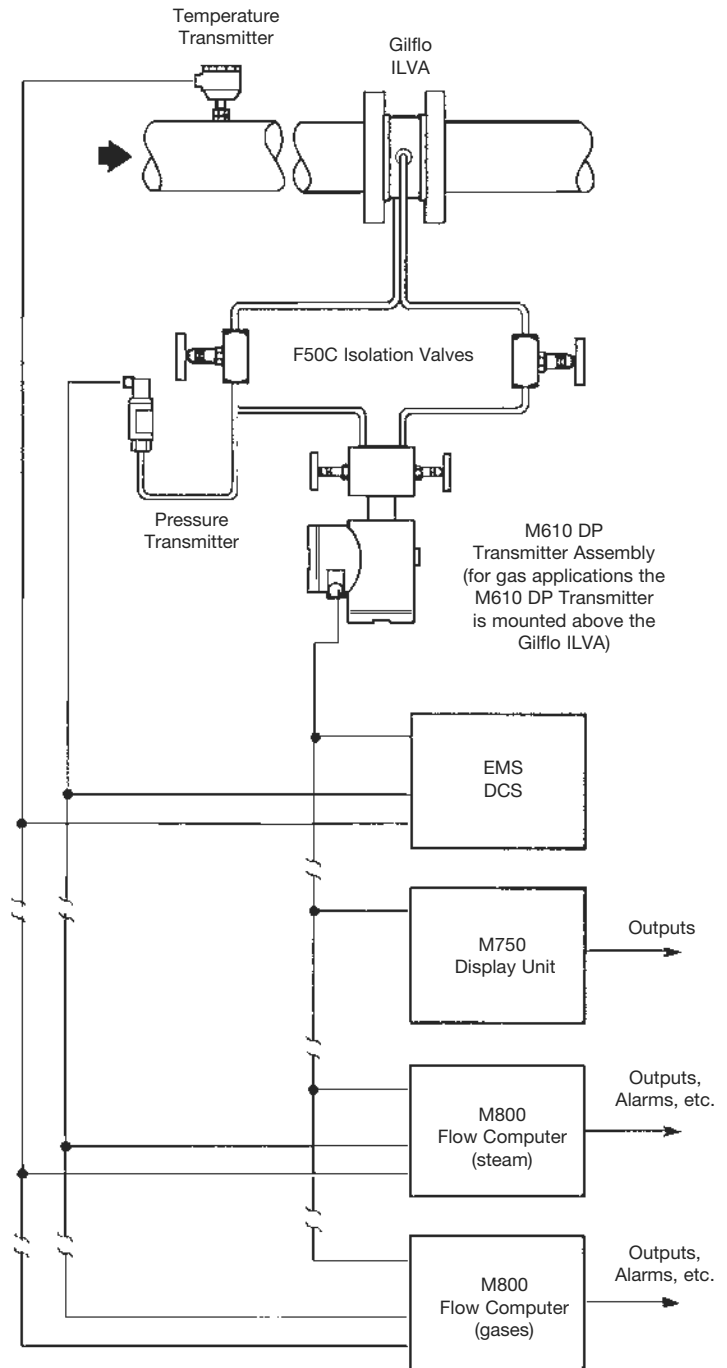

The Gilflo ILVA metering system consists of 2 major parts:

1. The Gilflo ILVA pipeline unit. This is installed in the line where the flow is to be measured. Using impulse pipework, this is connected to:
  - a- To act as a suitable input to an EMS/DCS which can be programmed by the user to carry out the linearizing of the output signal based on the calibration data that is supplied with each Gilflo ILVA meter. Additional inputs from the pressure and temperature transmitters can be used to carry out density compensation for compressible flow applications.
  - b- To supply an M750 Display Unit. This gives a non-compensated display of rate of flow and totaled flow. It is suitable for liquid, gas and steam applications where density compensation is not required.
  - c- To supply an M800 (steam) or (gas) Flow Computer. Use of the pressure and temperature transmitters enables automatic density compensation to be carried out for compressible flow applications. See relevant TIS's for details of pressure/temperature limits for M800 Flow Computers.

The Gilflo ILVA pipeline unit can be used to measure the flow of most industrial liquids, gases and vapors within the pressure and temperature limits detailed in the TIS's.

### Installation

Care must be taken to meet all the requirements of the Installation and Maintenance Instructions that are included with the equipment.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-8-010-US 10.07

# Gilflo ILVA Flowmeters - System Overview

## Installation points to watch:

1. Ensure that all pipework is adequately supported and properly aligned. Specialcare should be taken to ensure that the Gilflo ILVA pipeline unit is concentrically mounted in the line. (Special installation kits area available to order for sizes 2" to 8").
2. The Gilflo ILVA pipeline unit should be selected on capacity rather than line size. Where line size changes on steam systems are necessary, use eccentric reducers to avoid buildup of condensate.
3. The minimum recommended lengths of straight pipe upstream and downstream are 6D and 3D respectively. See TIS (ref TIS 8.009) for Gilflo ILVA for more details.
4. Take care to ensure the correct direction of flow as indicated by the arrow on the meter body.
5. Take care to avoid reverse flow through the meter.
6. Avoid installing the meter downstream of a pressure reducing valve (especially on steam systems) as this may cause inaccurate readings. Similarly, avoid installing the meter downstream of a partially open valve.
7. Remember that actuated valves may cause rapid pressure fluctuations which could cause damage.
8. On steam or liquid systems, the M610 DP transmitter assembly is mounted below the meter. Take care to ensure that all impulse lines remain full to prevent damage to the DP transmitter through contact with steam or high temperature liquid.
9. For steam applications, care should be taken to ensure adequate line drainage, trapping etc. so as to avoid condensate slugs impacting the meter. Where practical, steam separators should be fitted. These should be drained using a float trap set.
10. For gas applications, the M610 DP transmitter assembly is installed above the pipework. Ensure that the impulse lines allow free drainage of moisture away from the DP transmitter and back into the pipeline.

## Electrical wiring

All electrical wiring must be carried out to the appropriate standards. Full wiring interconnection details are included with the equipment.

## Associated equipment

Item	Description	Technical literature
M610	DP transmitter assembly	TI-P335-10 US

M800	Steam flow computer	TI-P331-04-US
M800	Gas flow computer	TI-P333-24-US

## TVA Flowmeter for Saturated Steam Service

### Description

The Spirax Sarco TVA flowmeter is designed for use on saturated steam only and operates on the target principle, by measuring the force produced on a moving cone by the fluid flow. This strain is then converted into density compensated mass flowrate and is transmitted via a single loop powered 4-20 mA and pulsed output. TVA flowmeters also incorporate a totalised flow function and RS 232 Modbus communications.

### Sizes and pipe connections

2", 3" and 4"

The TVA flowmeter is of wafer design, suitable for fitting between the following flanges: ASME (ANSI) B 16.5 Class 150 and Class 300

#### Note:

The Spirax Sarco TVA flowmeter should be installed in pipework manufactured to BS 1600 or ASME (ANSI) / ASME B 36.10 Schedule 40.

For systems with different standards/schedules, spool pieces manufactured from BS 1600 or ASME (ANSI) / ASME B 36.10 Schedule 40 pipe should be used. If this is not possible, please contact Spirax Sarco.

### Pressure/temperature limits

The product should not be used in this region due to software limitations.

Maximum design pressure	464 psig @ 462°F
Maximum design temperature	462°F
Minimum design temperature	32°F
Maximum operating pressure	Horizontal flow 464 psig @ 462°F Vertical flow 101 psig @ 338 F
Minimum operating pressure	9 psig
Maximum operating temperature (saturation)	462°F
Minimum operating temperature	32°F
<b>Note:</b> For lower operating temperatures consult Spirax Sarco	
Maximum electronics ambient temperature	131°F
Maximum electronics humidity level	90% RH (non-condensing)
Designed for a maximum cold hydraulic test pressure of 754 psig	

### Materials

Flowmeter body	Stainless steel S.316 1.4408 CF8M
Internals	431 S29/S303/S304/S316
Spring	Inconel X750 or equivalent
Flowmeter stem	Stainless steel 300 series
Electronics housing	Aluminium LM25

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

### Technical data

IP rating	IP65 with correct cable glands
Power supply	Loop powered nominal 24 Vdc
Outputs	4 - 20 mA (proportional to mass flow) Pulsed output ( $V_{max}$ 28 Vdc $R_{min}$ 10 k $\Omega$ )
Communication port	Modbus EIA 232C (RS 232)

### Performance

The TVA flowmeter has inbuilt electronics which give a density compensated output. An LCD display is incorporated within the electronics head. The M750 display unit can be used to provide a remote display function if required, utilising the 4 - 20 mA output.

#### System uncertainty, to 95% confidence (2 STD): (in accordance with ISO 17025)

$\pm 2\%$  of measured value from 10% to 100% of maximum rated flow.  
 $\pm 0.2\%$  FSD, from 2% to 10% of maximum rated flow.  
Turndown : up to 50:1

As the TVA flowmeter is a self contained unit, the uncertainty quoted is for the complete system. Many flowmeters claim a pipeline unit uncertainty and for a true system uncertainty, the individual uncertainty values of any associated equipment, such as DP cells, need to be added to the pipeline value.

### Pressure drop

The pressure drop across the TVA is nominally 300 ins water gauge at maximum rated flow for the 2", and 200 inches water gauge for the 3" and 4".

# TVA

## Flowmeter for Saturated Steam Service

	Minimum flow	71	97	117	134	159	172	190	216	243	265	284	lb/hr
4"	Maximum flow	5,456	7,573	9,187	10,547	12,304	13,347	14,778	16,912	18,827	20,593	21,246	lb/hr
	Minimum flow	108	152	183	212	247	267	295	337	377	412	425	lb/hr

### Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P337-51 and IM-P337-52) supplied with the product.

**The following main points are given for guidance only:**

1. The TVA flowmeter should be mounted with a minimum of 6 straight pipe diameters upstream and 3 downstream. No valves, fittings or cross sectional changes are permitted within these pipe lengths. Where an increase in nominal pipe diameter is required, upstream of the flowmeter, the length of straight pipe should be increased to 12 diameters. Similarly, where a Spirax Sarco TVA is installed downstream of two 90 degree bends in two planes, a pressure reducing valve or a partly open valve, 12 upstream pipe diameters should be allowed.
2. It is important that the internal upstream and downstream diameters of pipe are smooth. Ideally seamless pipes should be used and there should be no intrusive weld beads on the internal diameter. It is also recommended that slip-on flanges are used to avoid this.
3. Care should be taken to install the TVA flowmeter concentrically in the line. If this is not done, flow measurement errors may occur.
4. The TVA flowmeter can be installed in any orientation up to a line pressure of 101 psig.
5. As for all steam flowmetering installations, good basic steam engineering practices should be followed:
  - Correct line drainage through adequate trapping.
  - Good alignment and support of associated pipework.
  - Line size changes achieved by the use of eccentric reducers.
  - Do not lag (insulate) the TVA body or the mating flanges.

### How to order

**Example:** 1 off Spirax Sarco 4" TVA flowmeter for installation between ASME (ANSI) B 16.5 Class 150 flanges for use on saturated steam at 145 psig - Maximum flow 12,304 lb/hr.

**Note:** For details of the optional remote display see the relevant Spirax Sarco M750 literature.

TI-P337-50-US 04.11

## Orifice Plate Flowmeters

### M410 Orifice Plate and Carrier Assembly

#### Description

The M410 Orifice Plate and Carrier assembly is a primary flow element consisting of a tab handled square edged orifice plate and optional carrier. The orifice plate is designed and manufactured to meet the requirements of ASME-MFC-3M in all respects and is suitable for the measurement of the rate of flow of most liquids, gases and steam. The tab handled orifice plate can be used:

- a: on its own fitted between flanges with pressure tapings in the users pipework or flanges.  
or
- b: fitted into a carrier with integral flange tapings designed to fit between customer flanges.

#### Limiting Conditions

The pressure and temperature limitations of both the tab handled plate and the carrier assembly are the same as the specified flange ratings.

#### Performance

The performance of an orifice plate metering system can be greatly influenced by installation variables, so the figures given below are for guidance only:

- Accuracy:** typically +/- 3% of actual flow.  
(equivalent to +/- 1.5% full scale deflection at 50% of rated maximum flow).
- Repeatability:** typically +/- 0.3%.
- Turndown:** typically 4:1.

#### Pipe Sizes Available

Tab handled plates with or without carriers are available to suit the following pipe sizes:

1", 1-1/2", 2", 2-1/2", 3", 4", 5", 6", 8", 10", 12", 14", 16", 18", 20", 24"

#### Connections

Tab handled plates and carriers are available to suit the following flange specifications:

ANSI B 16.5 class 150, 300, 600.

#### Construction Materials

Tab handled orifice plate	Stainless Steel Grade 316
Carrier	passivated zinc plated carbon steel
Gaskets	exfoliated graphite

#### Pressure tapings

When the tab handled orifice plates are used without the optional carrier, it is the responsibility of the user to provide appropriate pressure tapings in either the flanges or upstream and downstream pipework in line with ASME-MFC-3M.

The optional carrier assembly incorporates upstream and downstream pressure tapings threaded 1/2" NPT. These tapings are 1 inch either side of the orifice plate face in line with the requirements of ASME-MFC-3M

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

# Orifice Plate Flowmeters

## M410 Orifice Plate and Carrier Assembly

### Associated Equipment

M800 series steam flow computer	TI-P331-04-US
M800 series gas flow computer	TI-P333-24-US
M750 display unit	TI-P332-08 US
M610 DP transmitter assembly	TI-P335-10 US
F50C isolation valve	TIS 8.401
EL2270 temperature sensor	TIS 8.402
EL2271 temperature sensor & transmitter assy.	TIS 8.402
EL2810 temperature transmitter	TIS 8.402
EL2600 pressure transmitter	TIS 8.403

For a general description of orifice plate flowmetering systems, see TIS 8.202 (density compensated system) and TIS 8.201 (non density compensated system).

### Installation

It is important that all details of the installation conform to ASME-MFC-3M. Of special note, is the long, straight lengths of pipe that must be present upstream of the orifice plate. As an approximate guide, 20 to 30 pipe diameters upstream and 5 downstream should be adequate but it is recommended that reference is made to the relevant standard. A summary of the basic requirements is included with the M410 equipment.

### Maintenance

A visual inspection of the orifice plate should be made at regular intervals to check for dirt buildup, damage or a loss of sharpness of the upstream edge of the plate. Replacement orifice plates and gaskets are available from Spirax Sarco.

### How to Specify

M410 Orifice plate primary element with/without optional carrier assembly conforming to ASME-MFC-3M.

### How to Order

1- Orifice plate and carrier assembly.

**Important note:** In order that a correctly sized orifice plate can be supplied, it is essential that full details of the installation and estimated flow rates are supplied. This is best done using an orifice plate customer data sheet (TIS 8.203) info available from your local representative.

### Notes:

- 1: Dimension C is 1 inch for all sizes.
- 2: For line sizes 1" to 10", orifice plate thickness T is 3mm, 12" and above, T is 6mm.
- 3: Gaskets are 1.6 mm thick.
- 4: For line sizes up to 14", carrier assembly thickness B is 82mm, 16" and above, B is 85mm.
- 5: Maximum weights shown are based on ANSI 600 flanges.

### Dimension (approximate) in inches

Inches	ANSI	ANSI	ANSI	Maximum Weight Lb
	150 A	300 A	600 A

Flow Measurement

## Orifice Plate Flowmeters

### Orifice Plate Flowmetering System (density compensated)

#### Description

The Orifice Plate Metering system is suitable for measuring the rate of flow of steam, liquids and most gases. For steam and gas flowmetering applications, it is important to take account of changes in flowing density due to flowing pressure and temperature variations. If ignored these changes in flow density will cause significant measurement errors. Liquids being non-compressible do not suffer from this problem and generally density compensation is not required. Compatible Flow Computers, Pressure and Temperature Transmitters are listed in the Associated equipment section.

#### Options available:

The Orifice Plate Metering package is available in a number of options to suit most requirements. For applications requiring density compensation, select one of the four basic options and add a flow computer and pressure/temperature measuring equipment as required:

- Option 1 M410 orifice plate and gaskets
- Option 2 M410 orifice plate, gaskets and M610 DP transmitter assembly
- Option 3 M410 orifice plate, gaskets, carrier ring assembly and F50C isolation valves
- Option 4 M410 orifice plate, gaskets, carrier ring assembly and F50C isolation valves and M610 DP transmitter assembly

**M410 orifice plate.** This is installed in the line at the point where the flow is to be measured. It produces a differential pressure proportional to the rate of flow.

**F50C isolation valves.** These are used to isolate the impulse lines close to the orifice plate.

**M610 DP transmitter assembly.** This is installed close to the orifice plate and converts the differential pressure to a 4-20mA signal for retransmission to other equipment. The M610 is supplied ready fitted with a 3 way manifold which acts as secondary isolation and pressure equalization valve.

#### Associated Equipment

**EL2600 Pressure transmitter.** This is installed in the impulse piping (high pressure side) and provides a pressure signal for density compensation.

**EL2271 Temperature sensor and transmitter assembly.** This is installed in the line upstream of the orifice plate and provides a temperature signal for density compensation. (Suitable for temperatures up to 482°F).

**EL2270 Temperature sensor.** This is a Pt100 temperature sensor that is installed in the line to provide a temperature signal to the remote M800 temperature transmitter. (Suitable for temperatures up to 932°F).

**M800 Temperature transmitter.** This is a remote temperature transmitter for use in conjunction with the EL2270 temperature sensor for applications with temperatures between 482°F and 932°F.

**M800 Series Steam flow computer.** This flow computer is suitable for use with orifice plates on saturated and superheated steam flow applications. It uses the flow, pressure and temperature signals to carry out necessary density compensation calculations for all steam conditions up to a maximum of 609 psig/932°F. Outputs to drive the DP, pressure and temperature transmitters are standard

**M800 Series Gas flow computer.** Details as for the M800 gas flow computer except that the M800 gas flow computer is for gas applications.

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

M410 Orifice plate and Carrier assembly

Typical configuration shown here is for a superheated steam application. Gas applications will differ slightly.

# Orifice Plate Flowmeters

## Orifice Plate Flowmetering System (density compensated)

### Density Compensated System Requirements

In addition to a M410 assembly (Option 1 - 4), the following components are required:

#### Saturated Steam

Either a EL2600 pressure transmitter or a EL2271 temperature transmitter (substitute with EL2270 for temperatures above 482°F), and a M800 series steam flow computer.

#### Superheated Steam

Both a EL2600 pressure transmitter and a EL2271 temperature transmitter (substitute with EL2270 for temperatures above 482°F), and a M800 series steam flow computer.

#### Gases

Both a EL2600 pressure transmitter and a EL2271 temperature transmitter (substitute with EL2270 for temperatures above 482°F), and a M800 series gas flow computer.

### Performance

The performance of an orifice plate metering system can be greatly influenced by installation variables, so the figures given below are for guidance only:

Accuracy:	typically +/- 3% of actual flow. (equivalent to +/- 1.5% full scale deflection at 50% of rated maximum flow).
Repeatability:	typically +/- 0.3%.
Turndown:	typically 4:1.

### Installation

It is important that all details of the installation conform to ASME-MFC-3M. Of special note, is the long, straight lengths of pipe that must be present upstream of the orifice plate. As an approximate guide, 20 to 30 pipe diameters upstream and 5 downstream should be adequate but it is recommended that reference is made to the relevant standard. A summary of the basic requirements is included with the M410 equipment.

### How to Specify

1- M410 Orifice plate flowmeter system with automatic density compensation to meet requirements of ASME-MFC-3M.

### How to Order

1- M410 Orifice Plate Steam Metering System to include tab handled plate and carrier, F50C isolation valves, M610 DP transmitter assembly, EL2600 pressure transmitter and M800 Steam Flow Computer.

Connections from orifice plate assembly to 3-way manifold is via 2 impulse lines to be kept as short as possible but of minimum length of 40 inches, minimum 1/2" bore pipe of suitable pressure rating.

Typical M610 installation for steam applications

Configuration showing M410 orifice plate with carrier for steam applications

Flow Measurement

TI-8-202-US 10.07

## Orifice Plate Flowmeters

### Orifice Plate Flowmetering System (non-compensated)

#### Description

The Orifice Plate Metering system is suitable for measuring the rate of flow of steam, liquids and most gases. For steam and gas flowmetering applications where the operating pressure and temperature are steady, it is not necessary to incorporate any means of automatic density compensation. Liquids, being non compressible, are not significantly affected by pressure and temperature variations and so density compensation is not normally required.

#### Options Available:

The Orifice Plate Metering package is available in a number of options to suit most requirements. For non density compensated applications, the following options are available :

- Option 1 M410 orifice plate and gaskets
- Option 2 M410 orifice plate, gaskets and M610 DP transmitter assembly
- Option 3 M410 orifice plate, gaskets, carrier ring assembly and F50C isolation valves
- Option 4 M410 orifice plate, gaskets, carrier ring assembly, F50C isolation valves and M610 DP transmitter assembly

#### Description

**M410 orifice plate.** This is installed in the line at the point where the flow is to be measured. It produces a differential pressure proportional to the rate of flow.

**F50C isolation valves:** These are used to isolate the impulse lines close to the orifice plate.

**M610 DP transmitter assembly:** This is installed close to the orifice plate and converts the differential pressure to a 4-20mA signal for retransmission to other equipment. The M610 is supplied ready fitted with a 3 way manifold which acts as secondary isolation and pressure equalization valve.

#### Associated Equipment

**M750 Display Unit.** This is a panel mounting flow indicator that displays flow rate and total flow, with analog and digital outputs available. The M750 supplies 19v DC to power the M610 DP transmitter.

#### Performance

The performance of an orifice plate metering system can be greatly influenced by installation variables, so the figures given below are for guidance only:

- Accuracy: typically +/- 3% of actual flow (equivalent to +/- 1.5% full scale deflection at 50% of rated maximum flow).
- Repeatability: typically +/- 0.3%.
- Turndown: typically 4:1.

#### Installation

It is important that all details of the installation conform to ASME-MFC-3M. Of special note, is the long, straight lengths of pipe that must be present upstream of the orifice plate. As an approximate guide, 20 to 30 pipe diameters upstream and 5 diameters downstream should be adequate but it is recommended that reference is made to the relevant standard. A summary of the basic requirements is included with the M410 equipment.

M410 Orifice Plate and Carrier Assembly

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

# Orifice Plate Flowmeters Customer Data Sheet

This Customer Data Sheet is intended to gather together all relevant information necessary to size and specify an Orifice Plate Flowmetering System. All equipment will be supplied to the customer based on the information received.

<b>Company Name</b>	
<b>Address</b>	
<b>Contact</b>	
<b>Project reference</b>	
<b>Notes</b>	

Please complete all sections and supply drawings, sketches etc. where appropriate.

### Section A: Working Fluid Details

Name of fluid (e.g. steam, water, air)				
State of fluid (e.g. liquid, vapor, gas)				
	<b>Min value</b>	<b>Normal value</b>	<b>Max value</b>	<b>Units</b>
Flowing Pressure				
Flowing Temperature				
Flowing Density				
Estimated rate of flow				

**Notes:**

The pressure drop at specified maximum rate of flow will be 100 inches water gauge unless otherwise stated. Below 25% of specified maximum rate of flow, system accuracy cannot be guaranteed due to turndown limitations of orifice plates.

### Section B: Pipeline Details

	Value
Nominal pipe size (inches)	
Pipe inside diameter (inches)	
Pipe schedule	
Flange rating (ANSI)	
Number of straight pipe diameters upstream	
Number of straight pipe diameters downstream	
Pipe material	
DP Trapping position*	

\*If ordering plate only (no carrier) specify tapping position (corner, flange, D & D/2, or 2.5D & 8D).

Please provide a sketch showing all details of pipework including any valves, bends, fittings etc in the area where the M410 orifice plate is to be fitted. This is important as the performance of all orifice plates can be affected greatly by installation factors. Using the information from sections A and B the correct orifice plate sizing will be accomplished.

### Section C: M410 Kit Options

The Orifice Plate is available in 4 basic kits. To create a complete metering system, additional components should be selected. The composition of the system is dependent on whether or not density compensation is required.

**Note: Check all items required.**

Option		Check
1	M410 orifice plate and gaskets	
2	M410 orifice plate, gaskets, M610 DP transmitter assembly	
3	M410 orifice plate, gaskets, carrier rings and 2 F50C isolation valves	
4	M410 orifice plate, gaskets, carrier rings, 2 F50C isolation valves and M610 DP transmitter assembly	

### Section D: Associated Transmitters Required for Density Compensated Systems

Item	Range length	Insert	Check	See TIS #
El 2600 pressure transmitter				8.403
EL2270 temperature transmitter				8.402
EL2271 temperature sensor & transmitter				8.402
Temperature Sensor Pocket				8.402
M800 steam flow computer				TI-P331-04-US

### Section E: Associated Flow Computers

Item	Supply (volts)	Check	See TIS #
M750 uncompensated panel mtd. display			TI-P332-08-US
M800 steam flow computer, wall mtd. *			TI-P331-04-US
M800 steam flow computer, panel mtd. *			TI-P331-04-US
M800 gas flow computer, wall mtd. *			TI-P333-24-US
M800 gas flow computer, panel mtd. *			TI-P333-24-US

\*Provide density compensation

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

Flow Measurement

## M750 Display Unit

### Description

The M750 is an intelligent digital panel display unit that can accept inputs from a wide variety of sensors and digitally process and display the signal. In addition, it has the facility to accept up to two 'Option pods', which can be either isolated 4-20 mA retransmission or two normally open alarm relays. The M750 is fully programmable for any specific application from the front panel.

The M750 totaliser function enables non-volatile storage of the integrated total to be maintained within the unit, even after loss of power. The output option pods can be selected to operate on either Process Variable (rate) or Total.

The M750 is ideally suited as a display unit for use with our flowmeters. It can provide an indication of flowrate and totalized flow for Gilflo, ILVA, DIVA, orifice plates and vortex flowmeters as well as providing a 19 Vdc loop power supply where required.

The unit can be used 'stand-alone' or, utilizing the Modbus serial communications, as part of a larger system.

### Technical data

See overleaf.

### Weight

0.5 lbs (230 grams)

### Dimensions approximate in inches (millimeters)

Rear elevation

Front elevation

Panel cut out

3.62" (92 mm) x 1.77" (45 mm)

Option pod

### How to specify:

M750 panel mounted digital display unit that accepts all commonly used process signals, designed to allow current retransmission or dual relay output option pods to be easily installed without the need for dismantling or recalibration.

### How to order

Example: 1 off M750 display unit complete with dual relay and current retransmission option pods.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

Flow  
Measurement

## M610 Series II DP Transmitter Assembly

### Description

The M610 Series II DP transmitter assembly is designed to accept a differential pressure input from a primary flow element such as an orifice plate or Gilflo flowmeter and convert it into an analogue 4-20 mA output signal. The standard version comes with digital communications in the form of HART® 5.2 which is superimposed on the 4-20 mA output. The 3-way manifold which is supplied already assembled to the DP transmitter acts as a means of secondary isolation and as a pressure equalisation valve to check the zero of the DP transmitter.

The M610 Series II DP transmitter assembly consists of two items:

- A high accuracy (0.1%) differential pressure transmitter.
- A 3-way carbon steel isolation manifold.

**Note:** These items are supplied already assembled.

### Pipe connections

The process ports on the 3-way manifold are threaded 1/2" NPT at 2.126" (54mm) centers.

### Electrical connections

M20 x 1.5 screwed terminals.

### M610 Series II technical data

<b>Span</b>	0 - 52.2" H <sub>2</sub> O (0 -13 kPa) minimum 0 - 522" H <sub>2</sub> O (0 -130 kPa) maximum
<b>Output</b>	4 - 20 mA dc and HART® protocol 5.2
<b>Power supply</b>	16 V to 45 Vdc (for non-certified application) 16 V to 28 Vdc (for E Ex ia 11c T4 / T5)
<b>Pressure limits</b>	-14.5 to 2030 psig
<b>Temperature limits</b>	-40°F to +185°F (ambient for non-certified application) -40°F to +212°F (process)
<b>Accuracy</b>	± 0.1% of calibrated span to include effects of linearity, hysteresis and repeatability.
<b>Materials of construction</b>	Body - Stainless steel. Diaphragm - Austenitic stainless steel 316L 3-way manifold - Carbon steel Fluid fill - Silicone oil
<b>Intrinsic safety</b>	ATEX Ex II 1GD - E EX ia 11c T4/T5
<b>Enclosure rating</b>	NEMA 6/6P (IEC IP67)
<b>EMC emissions and immunity</b>	To BS EN 61326:1997

**Note:** If HART® communications are required in intrinsically safe applications, barriers must be used which are designed to pass the HART® signal.

### Calibration

The M610 Series II DP transmitter assembly is supplied with a span factor set to suit a particular application. However, should load conditions and/or details of actual installation change, the range of the M610 can be adjusted within the limits 0 - 52.2" H<sub>2</sub>O (0 - 13 kPa) and 0 - 522" H<sub>2</sub>O (0 - 130 kPa) as described in the Installation and Maintenance Instructions supplied with the product.

### Installation

Full installation details are given in the literature that accompanies the M610 Series II DP transmitter assembly.

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

### Dimensions / weights (approximate) in inches and lbs.

A	B	C	DP transmitter	3-Way manifold	M610 assembly
8.7"	7.6"	6.9"	14.3 lb	2.2 lb	16.5 lb

### How to order

Example: 1 off M610 Series II DP transmitter assembly calibrated to give an output of 20 mA at an applied differential pressure of specified value.

### Associated equipment

Orifice plate flowmeter.  
Gilflo flowmeter system.

# Scanner 2000 Steam Mass Flow Transmitter

## Description

The Scanner 2000 steam mass flow transmitter takes its inputs from a primary flowmeter, (Gilflo or ILVA) through impulse lines. It converts the differential and static pressure into a corrected mass flowrate of saturated steam, which is accessible via the RS485 Modbus link or optionally via a 4 - 20 mA signal.

## Configuration

Scanner 2000 steam mass flow transmitters are uniquely configured at the factory to work with a single, specific Gilflo or ILVA flowmeter, for a specific flow application. For correct operation the Scanner 2000 transmitter must be installed with its allocated flowmeter. A label on the packaging gives the serial number of the matched product. The Scanner 2000 can be configured using an RS485 equipped PC with the supplied configuration software.

### Note:

A DB9 Serial RS232 to RS485 converter will otherwise be required to connect your PC to the Scanner 2000. If your PC only has USB ports a USB to DB9 Serial port converter will be required. These are available from most electronic equipment suppliers.

## Available types and approvals

Explosion proof types available:

### CSA

- Class 1, Div 1, Groups B, C and D
- Type 4 Enclosure
- T6 Temperature Class

### ATEX

- ATEX II 2 GD
- Ex d IIC T6 (-40°F to 158°F) or
- Ex td A21 IP68 T85C (-40°F to 158°F)
- All Scanner 2000's are compliant

## Features

In head LCD providing local indication of density compensated rate and total saturated steam flow. RS485 Modbus RTU slave functionality for remote indication, data logging and configuration.

## Associated equipment

- Gilflo flowmeter
- ILVA flowmeter
- M750 flow indicator
- Optional local display

## Materials

Enclosure	Cast aluminium (painted with epoxy and polyurethane)	
Body	Stainless steel	AISI 316
3-way manifold	Stainless steel	AISI 316
Fluid fill	Silicone oil	

## Pipe connections

The process ports on the 3-way manifold are threaded 1/2" NPT connections at 2 1/8" (54 mm) center.

## Electrical connections

3/4" NPT	Non approved and ATEX units
3/4" NPT	CSA units

## Technical data

<b>Range</b>	Minimum 2" H <sub>2</sub> O (.498 KPa)
	Maximum 200" H <sub>2</sub> O (49.8 KPa)
<b>Outputs</b>	4 - 20 mA (expansion board required)
	RS485 Modbus RTU slave (baud rate 300 to 38.4 K)
	Solid state relay, configurable as pulse or alarm
<b>Power supply</b>	6 V to 30 Vdc at 31 mA
<b>Pressure limits</b>	155 bar
<b>Temperature limits</b>	-40°F to 158°F (-40°C to 70°C)
	LCD contrast is reduced below -22°F (-30°C)
<b>Accuracy</b>	±0.05% for Spans >10% of the URL
	±0.005 (URL/SPAN) for Spans <10% of the sensor
<b>Enclosure rating</b>	IEC IP68

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

## Safety information, Installation and Maintenance

**Warning:** This document does not give sufficient information for safe installation of the product.

Full details are given in the Installation and Maintenance Instructions supplied with the Scanner 2000.

Flow  
Measurement

# Scanner 2000 Steam Mass Flow Transmitter

## Typical installation

## How to order

The following information will allow us to uniquely configure the Scanner 2000 for each application prior to despatch.

Parameter	Range of values	Customer requirement	Notes
Flowmeter type	Gilflo or ILVA		Specific flowmeter type
Gilflo / ILVA serial number	-		Required for existing flowmeters only
Analog output units	kg/h, lb/h, Btu/h, or kJ/h		Specific required units
Analog output scaling (4 mA)	kg/h, lb/h, Btu/h, or kJ/h		Normally zero
Analog output scaling (20 mA)	kg/h, lb/h, Btu/h, or kJ/h		Normally maximum required flowrate
Maximum range $\Delta p$	2" to 200" H <sub>2</sub> O (0.498 to 49.8 KPa)		From Gilflo and ILVA sizing sheet
Steam quality (Dryness fraction)	60 to 100%		Set at 100% unless otherwise specified

**Example:** 1 off Scanner 2000 steam mass flow transmitter configured for use with a 3" (DN80) ILVA flowmeter passing 4400 lb/h of saturated steam at 101 psig.

TI-P335-23-US 12.09

## Model F50C Isolating Valve

### Description

The F50C is a needle type isolating valve designed for primary isolation in flow metering applications with steam and other industrial fluids.

### Material

No	Part	Materials
1	Body	Carbon steel zinc plated and passivated
2	Seals	Graphoil (not shown)

Maximum operating pressure: 5990 psig

Maximum operating temperature: 806 degrees F

### Dimensions (approximate) in inches

A	B	C	Weight
2.6	1.1	3	1.1 lb

### Connections

0.5" NPT female (both ends).

### How To Specify

Model F50C Isolating Valve.

Flow  
Measurement

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-8-401-US 01.97

211

## EL2270 and EL2271 Temperature Probes

### Description

#### EL2270

The EL2270 is a Pt100 platinum resistance temperature sensor for general industrial use. The sensing device is an RTD 3 wire device that meets EN 60751: Class A. This sensor can be connected directly to any temperature indicator or controller that has a 3 wire Pt100 input. A quick response version [1.5" (40 mm) insertion length only] is also available for applications such as plate heat exchanger control. A miniature version of the EL2270 may also be ordered. This has a 1/4" BSP taper thread, and a tip length of 1.5" (39 mm).

#### EL2271

The EL2271 is a combined Pt100 sensor and transmitter assembly. The sensing element is a 3 wire device that meets EN 60751: Class A and the transmitter has a 4 - 20 mA output. The transmitter (only) meets ATEX II 1G EExia IIC/IIB T4/T5/T6. A comprehensive standard range is normally available from stock. Non-standard ranges can be obtained to special order, subject to a low limit of -58°F (-50°C), and a maximum of 932°F (+500°C). The 4 - 20 mA output can be connected directly to any temperature indicator, controller or flow computer that has a 4 - 20 mA input. Contact your local representative for further details. Transmitters with 3 point calibration are available to special order.

### Pockets (thermowells)

#### General

Three types of pockets are available:

1. Thin wall with a 1/2" NPT process connection for non-flow applications only.
2. Drilled taper with a 1/2" NPT process connection.
3. Hygienic, to 3A sanitary standard, with a 1 1/2" sanitary clamp connection (ASME BPE) electropolished to 0.4 µm (a Declaration of Conformity is available).

**Note:** No pocket is available for the miniature EL2270.

Material	316 stainless steel
Maximum temperature	932°F (500°C)

#### Selection

Pockets are sized to suit the probe tip length 'D', and are specified as 'pocket to suit a \_\_\_ inch (mm) probe'.

**Note 1** - The pocket dimension 'F' is 1" (25 mm) shorter than the probe length 'D', which appears to be incorrect. The reason is that the threaded body of the pocket acts as a stand-off, and therefore allows adequate clearance between the probe tip and the end of the pocket.

**Note 2** - Pockets to suit 8.86" (225 mm) and 28.5" (725 mm) probes are for non-flow applications only [maximum flow velocity 2.13 fps (0.65 m/sec)].

### Dimensions (approximate) in inches (mm)

Product range	EL2270*			EL2271
	Standard	Miniature	Quick response and duplex quick response

EMC emissions and susceptibility	-	EMC directive 89/336/EEC EN 61326:1997/A1, 1998/A2.2001

## Pressure/temperature limits

The EL2270 and EL2271 temperature probes can be used in applications where the process temperature is within the following limits. Where greater temperatures and pressures are present, the temperature probe should be fitted with a pocket.

For air and steam applications, flow velocities must be below 147 fps (45 m/s) 105 fps (32 m/s for fabricated pockets).

For liquids a recommended velocity is 16 fps (5 m/s) [27.5 in. (700 mm) and 7.87 in. (200 mm) non-flow applications only].

Pressure and temperature limits of temperature probe. (ANSI 300 rated)

The product **must not** be used in this region.

Pressure and temperature limits of standard pockets. (ANSI 600 rated)

The product **must not** be used in this region.

A-B-C Fabricated pocket  
A-D-E Solid drilled pocket

## EL2600 Pressure Transmitter and 'U' Syphons

### Description

The EL2600 is a combined pressure sensor and transmitter which is designed for general and industrial use. It has a 2-wire 4-20 mA current loop, and a 1/4" NPT process connection. Two syphon tube and valve assemblies are available, one with a maximum design pressure of 362 psig, and one with a maximum design pressure of 1160 psig.

### Available ranges

Calibrated pressure range	Overpressure P max (psig)
0-23.2 psig, 36 psig	145
0-1.45 psig	145
0-3.62 psig	29
0-8.7 psig	58
0-14.5 psig	72
0-23.2 psig, 36 psig	145
0-58 psig	246
0-87 psig, 0-145 psig	507
0-232 psig, 362 psig	1160
0-580 psig	1740
0-870 psig	2900
0-1450 psig*	4640
0-2320 psig*	7250
0-3626 psig*	11600

**Note:** High pressure 'spikes' above maximum overpressure, even of very short (milli-seconds) duration, could damage sensors. If pressure peaks are likely to occur in your application, we recommend the use of a pressure snubber. Alternatively, a higher range pressure transmitter could be used, though this would mean some loss of signal resolution.

### Process connection

For fluids below 212°F the EL2600 may be mounted directly via its 1/4" NPT connection. Above 212°F, a 'U' syphon and isolating valve must be fitted between the EL2600 and the vessel or pipeline.

\*No 'U' syphon is available for these ranges, therefore maximum operating temperature is limited to 212°F

### Limiting conditions

#### Pressure/temperature limits EL2600

Minimum operating temperature	-22°F (medium)
	-4°F -20°C (ambient)
Maximum operating temperature (without syphon tube)	212°F (medium)
	176°F 80°C (ambient)

#### Low pressure syphon tube/valve

Maximum design pressure	362 psig
Maximum design temperature	500°F
Maximum working conditions	304 psig @ 422°F

#### High pressure syphon tube

Maximum design pressure	1160 psig
Maximum design temperature	842°F
Maximum working conditions	870 psig @ 842°F

### Technical data

Sensor type	0-23 psig to 0-230 psig	Piezoresistive
	0-580 psig to 0-5800 psig	Thin film
Supply voltage	10 Vdc to 30 Vdc	
Accuracy	≤ 0.5%	
Repeatability	≤ 0.05 of span	
Hysteresis	≤ 0.1% of span	
Protection rating	IP65	

### Approvals

EMC emissions	BS EN 61326: 1997 A1 and A2 Table 4
EMC susceptibility	BS EN 61326: 1997 A1 and A2 Table 4
	ANNEX A

### Materials

#### EL2600

Part	Material
Body	Stainless steel 316L WS 1.4435
Connector	Moulded plastic Polyamide PA 66

#### Low pressure syphon tube assembly (Valve ordered separately)

Part	Material
Tube	Carbon steel ASTM A 106 Gr. B. Phosphated
Valve Body	Brass
Handle	Phenolic

#### High pressure syphon tube assembly

Part	Material
Tube	Carbon steel BS3602: Part.1 1987 CFS 360 (zinc plated/passivated).
Valve Body	Carbon steel
Seat	PEEK/Polymain

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-P322-02-US 06.07

**EL2600**

**Dimensions/weights (approximate) inches and pounds**

EL2600				
A	B	C	D	Weight
4.1	2.25	1.1	1.9	0.44

'U' Syphon and isolating valve						
E	F	G	H	J	K	Weight
6.3	2	6	63	2.4	6	1.1

**Safety information, installation and maintenance**

This document does not contain sufficient information to install the product safely. See the Installation and Maintenance Instructions supplied with the product.

**Safety note:**

You attention is drawn to Safety Information Leaflet IM-GCM-10.

**Installation note:**

It is essential to use a 'U' syphon and valve for temperatures above 100°C to avoid damage to the unit.

**Maintenance note:**

No specific maintenance is required, but we recommend inspection and re-calibration of the transmitter once a year.

**How to order**

**Example:** 1 - Spirax Sarco EL2600 pressure transmitter, range 0 - 232 psig, with low pressure 'U' syphon and isolating valve.

**Low pressure 'U' syphon**

**High pressure 'U' syphon**

Flow Measurement

## MTI10 Insertion and MTL10 In-line Thermal Mass Flowmeter and Temperature Transmitter

### Description

The MTI10 insertion thermal mass flowmeter and the MTL10 in-line thermal mass flowmeter provide accurate mass flow measurement of clean, dry gases using constant temperature differential sensing for fast response and low flow accuracy. Constant temperature differential is achieved by changing the power to the sensor. The amount of power applied to the sensor is proportional to the mass flow rate of the gas being measured. The MTI10/MTL10 is virtually immune to changes in temperature and pressure over a wide range of flow.

The unique Cal-V feature allows for in-situ testing of the meter's accuracy by testing the functionality of the sensor and the processing circuitry.

MTI10\_MTL10 View software allows the user to adjust the meter configuration, monitor alarm conditions, log data and view data from your PC. The MTI10\_MTL10 View software connects the flowmeter to a PC using a USB mini connection.

The MTI10/MTL10 electronics are ideal in environments where high vibration or dirty power may affect meter performance. The transmitter provides a wide range of user outputs including two 4-20mA, pulse or alarm, and Modbus RTU.

Flow Measurement

Feature	Benefit
Calibrated in actual gas	Better accuracy, surrogate gases are not always linear across entire flow range
Higher power than competitor sensors	Faster response time, wider turndown
Temperature differential sensing	Better low flow accuracy
Cal-V	In-situ validation of sensor and circuitry, no need to return meter to factory
MTI10_MTL10 View	Ability to log data, adjust meter configuration and monitor alarm conditions from a PC
Immune to changes in temperature and pressure	Delivers repeatable, accurate flow measurement under varying flows

### Performance Specifications

Specification	Product	Performance
Accuracy	MTL10 In-line MTI10 Insertion	±1.0% of rate ±0.2% full scale ±1.0% of rate ±0.4% full scale
Repeatability	MTI10/MTL10	±0.2% full scale
Straight run requirements	MTL10 In-line MTI10 Insertion	8 diameters upstream, 4 diameters down 15 diameters upstream, 10 diameters down
Flow response time	MTI10/MTL10	0.9 seconds
Temperature accuracy	Standard sensor High temp sensor	±1.0°C (±1.8°F) ±2.0°C (±3.6°F)
Calibration	MTI10/MTL10	NIST standards using actual application gas

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

TI-8-632-US 1.16

# MTI10 Insertion and MTL10 In-line Thermal Mass Flowmeter and Temperature Transmitter

## Operating Specifications

### Fluid Type

Dry and clean gas or air

### Line Size

MTL10 in-line: 8mm to 150mm (0.25" to 6")  
MTI10 insertion: 40mm (1.5") and larger

### Process Temperature Limit

Standard sensor: -40 to 121°C (-40 to 250°F)  
High temperature sensor: 0 to 343°C (32 to 650°F)

### Process Pressure

#### MTI10 insertion

Compression fitting: 34.5 bar (500 psig)  
Retractor assembly : 8.6 bar (125 psig)  
High pressure retractor (with crank)  
NPT: 41.4 bar (600 psig)  
ANSI Class 150 and 300; No valve supplied

#### MTL10 in-line

NPT: 34.5 bar (500 psig)  
ANSI Class 150: 16 bar (230 psig)

**Note:** Pressure ratings stated for temperatures of 38°C (100°F)

### Input Power

DC: 22-26VDC, 24VDC nominal, 0.75 amp. standard  
AC: 85 to 264VAC, 47-63Hz, 20 watts optional

### Ambient Relative Humidity

0 to 90% RH, non-condensing

### Ambient Temperature Limit

DC power: -40 to 70°C (-40 to 158°F)  
AC power: -20 to 70°C (-4 to 158°F)  
Remote sensor box: -40 to 100°C (-40 to 212°F)

### Cable Conduit connection

ANSI 3/4" NPT  
M20 x 1.5mm (optional)

### Signal cable

5 conductor, 18 AWG , twisted, shielded. Maximum length 100 feet.

### Flow range

15 to 60,000 SFPM (0.07 to 280 NMPS)  
Turndown: up to 1,000:1; typical 100:1

### Typical Flow Range for MTI10 Insertion

Nominal Size	SCFM	NM <sup>3</sup> /hr
40mm (1.5")	0 - 840	0 - 1,320
50mm (2.0")	0 - 1,400	0 - 2,200
80mm (3.0")	0 - 3,080	0 - 4,860
100mm (4.0")	0 - 5,300	0 - 8,360
150mm (6.0")	0 - 12,000	0 - 18,900
200mm (8.0")	0 - 20,800	0 - 32,800
300mm (12.0")	0 - 46,600	0 - 73,500

### Full Scale Range for MTL10 In-line

Nominal Size	SCFM	NM <sup>3</sup> /hr
8 (0.25)	0 - 20	0 - 32
15 (0.50)	0 - 90	0 - 140
20 (0.75)	0 - 180	0 - 280
25 (1.00)	0 - 320	0 - 500
32 (1.25)	0 - 580	0 - 910
40 (1.50)	0 - 840	0 - 1,320
50 (2.00)	0 - 1,400	0 - 2,200
65 (2.50)	0 - 2,000	0 - 3,150
80 (3.00)	0 - 3,080	0 - 4,860
100 (4.00)	0 - 5,300	0 - 8,360
150 (6.00)	0 - 12,000	0 - 18,900

**Note:** Standard conditions of air at 70°F and one atmosphere. Consult Spirax Sarco for other gases and flow ranges.

## Outputs

### Analog

Two isolated 4-20mA output (one for flow rate, second programmable for flow rate or temperature); fault indication per NAMUR NE43

### Pulse

Isolated pulse output 0 – 100HZ, 5 – 24 volts p/p for flow.  
10 amps max.

### Communications

USB - Connect to PC using MTI10\_MTL10 View software provides configuration capability, remote process monitoring, and data logging.  
Modbus RTU – RS 485

## Physical Specifications

### Sensor Material

316 stainless steel, Hastelloy C276 (optional)

### Probe

316 stainless steel

### Compression Fitting

316 stainless steel

### Enclosure

NEMA 4X (IP68), aluminum

## Agency Approvals

CE Approved - MTI10, 24 VDC power only

Example		MTI10	100I	SS	ST	E1	DD	B2	G3

<sup>1</sup> Remote electronics recommended for all high temperature applications.

<sup>2</sup> Cable not included, it must be ordered separately.

<sup>3</sup> Do not select when ordering remote sensor

<sup>4</sup> Option boards needed for power, communications, and remote display options.

<sup>5</sup> Calibration prices are for new flowmeters only. Contact SSI for recalibration prices.

<sup>6</sup> Above 4,250 NM3M (2,500 SCFM) contact SSI for calibration charge.

<sup>7</sup> Use Display Configuration Code to specify the display orientation based on the flow direction.

Note: Insertion meters can be installed on pipes 40mm (1.5") and larger. Use the inline meters for pipes smaller than 40mm (1.5').

Calculating probe length (probe needs to be installed in the middle of the pipe):

Insertion length = 1/2 the pipe diameter + 80mm (3") + insulation + retractor (codes 15R through 36R use 250mm (10")). Round up to the next largest probe.

# FP 93B Flow Processor

## Description

The FP-93B Flow Processor satisfies the instrument needs for a variety of flowmeter types in steam, liquid, gas, and heat metering applications.

## Features

- "EZ Setup"- Guided Setup for First Time Users
- Liquid, Gas, Steam and Heat Flow Equations
- Utility Metering - Steam, Heating/Cooling, Chilled Water, Natural Gas, Compressed Air
- Menu Selectable Hardware & Software Features
- Internal Data Logging Standard
- Isolated Pulse, Analog and Relay Outputs Standard
- RS-232 Port Standard, Provides Power for Modem
- RS-485 Optional
- Windows™ Setup Software
- NX19 Gas Equations
- DDE, OPC Server & HMI Software Available
- Remote Metering by Wireless or Modem

## Specifications:

### Environmental

Operating Temperature: 32 to 120 °F  
 Storage Temperature: -40 to 185°F  
 Humidity 0-95% Non-condensing  
 Materials UL, CSA, VDE approved

### Display

Type: 2 lines of 20 characters  
 Types: Backlit LCD and VFD ordering options  
 Character Size: 0.3" nominal  
 User selectable label descriptors and units of measure

### Keypad

Keypad Type: Membrane Keypad  
 Keypad Rating: Sealed to NEMA 4  
 Number of keys: 16

### Enclosure

Enclosure Options: Panel, Wall, Explosion Proof  
 Size: See Dimensions  
 Depth behind panel: 6.5" including mating connector  
 Type: DIN  
 Materials: Plastic, UL94V-0, Flame retardant  
 Bezel: Textured per matt finish

### Power Input

The factory equipped power option is internally fused. An internal line to line filter capacitor is provided for added transient suppression. MOV protection for surge transient is also supported

Universal AC Power:	85 to 276 VAC, 50/60 Hz
DC Power Option:	24 VDC (16 to 48 VDC)
Power Consumption	
AC Power:	6.5 V/A
DC Power:	300 mA max.

## Flow Meter Types

Linear: Vortex, Turbine, Gilflo, Gilflo 16 point, ILVA 16 Point Mass Flow and others  
 Square Law: Orifice, Target and others  
 Multi-Point Linearization: May be used with all flowmeter types. Including 16 point, UVC and dynamic compensation.

## Flow Inputs

### Analog Input:

Accuracy: 0.02% FS at 68 °F  
 Ranges  
 Voltage: 0-10 VDC, 0-5 VDC, 1-5 VDC  
 Current: 4-20 mA, 0-20 mA,  
 4-20 mA stacked, 0-20 mA stacked  
 Basic Measurement Resolution: 16 bit  
 Update Rate: 4 updates/sec  
 Automatic Fault detection: Signal over/under-range,  
 Current Loop Broken  
 Calibration: Operator assisted learn mode  
 Extended calibration: Learns Zero and Full Scale of each range  
 Fault Protection:  
 Fast Transient: 500 V Protection (capacitive clamp)  
 Reverse Polarity: No ill effects  
 Over-Voltage Limit: 50 VDC Over voltage protection  
 Over-Current Protection: Internally current limited protected to 24VDC

### Pulse Inputs:

Number of Flow Inputs: one  
 Input Impedance: 10 k Ω nominal  
 Trigger Level: (menu selectable)  
 High Level Input  
 Logic On: 2.5 to 30 VDC  
 Logic Off: 0 to 2 VDC  
 Low Level Input (mag pickup)  
 Selectable sensitivity: 10 mV and 100 mV  
 Minimum Count Speed: 0.25 Hz (to maintain rate display)  
 Maximum Count Speed: Selectable: 0 to 50 kHz  
 Overvoltage Protection: 50 VDC

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

Flow Measurement

# FP 93B

## Flow Processor

### Temperature, Pressure, Density Inputs

The compensation inputs usage are menu selectable for temperature, temperature 2, pressure, density or not used.

Calibration: Operator assisted learn mode

Operation: Ratiometric

Accuracy: 0.02% FS at 68 °F

Basic Measurement Resolution: 16 bit

Update Rate: 2 updates/sec minimum

Automatic Fault detection:

Signal Over-range/under-range

Current Loop Broken

RTD short

RTD open

Reverse Polarity: No ill effects

Over-Current Limit

(current input) Internally limited to protect input to 24 VDC)

Available Input Ranges

Current: 4-20 mA, 0-20 mA

Resistance: 100 Ohms DIN RTD

100 Ohm DIN RTD (DIN 43-760, BS 1904):

Three Wire Lead Compensation

Internal RTD linearization learns ice point resistance

1 mA Excitation current with reverse polarity protection

Temperature Resolution: 0.02 °F

Temperature Accuracy: 1.0 °F

### Stored Information (ROM)

Steam Tables (saturated & superheated),

Fluid Properties: Water, Air, Natural Gas or Generic

### User Entered Stored Information (EEPROM / Nonvolatile RAM)

Transmitter Ranges, Signal Types

Fluid Properties

(specific gravity, expansion factor, specific heat, viscosity, isentropic exponent, combustion heating value, Z factor)

Units Selections (English/Metric)

Language Translations (optional)

### Excitation Voltage

24 VDC @ 100 mA (fault protected)

### Relay Outputs

The relay outputs usage is menu assignable to (Individually for each relay) Hi/Lo Rate Alarm, Hi/Lo Temperature Alarm, Hi/Lo Pressure Alarm, Pulse Output (pulse options), Wet Steam or General purpose warning (security).

Number of relays: 2 (3 optional)

Contact Style: Form C contacts

Contact Ratings: 240 V, 5 amp

### Analog Outputs

The analog outputs are menu assignable to correspond to the Un-compensated Volume Rate, Corrected Volume Rate, Mass Rate, Heat Rate, Temperature, Density, or Pressure.

### Number of Outputs: 2

Type: Isolated Current Sourcing (shared common)

Available Ranges: 0-20 mA, 4-20 mA (menu selectable)

Resolution: 16 bit

Accuracy: 0.05% FS at 68 °F

Update Rate: 5 updates/sec

Temperature Drift: Less than 200 ppm/C

Maximum Load: 1000 ohms

Compliance Effect: Less than .05% Span

60 Hz rejection: 40 dB minimum

EMI: No effect at 3 V/M

Calibration: Operator assisted Learn Mode

Averaging: User entry of DSP Averaging constant to cause a smooth control action

**Listing:** CE Approved, UL/CSA Pending

### Serial Communication

The serial port can be used for printing, datalog retrieval, modem connection and communication with a computer.

RS-232:

Device ID: 01-99

Baud Rates: 300, 1200, 2400, 9600

Parity: None, Odd, Even

Handshaking: None, Software, Hardware

Print Setup: Configurable print list and formatting

RS-485: (optional 2nd COM port)

Device ID: 01-247

Baud Rates: 300, 600, 1200, 2400, 4800, 9600, 19200

Parity: None, Odd, Even

Protocol: Modbus RTU (Half Duplex)

### Data Logging

The data logger captures print list information to internal storage for approximately 1000 transactions. This information can be used for later uploading or printing. Storage format is selectable for Comma-Carriage Return or Printer formats.

### Isolated Pulse output

The isolated pulse output is menu assignable to Uncompensated Volume Total, Compensated Volume Total, Heat Total or Mass Total.

Pulse Output Form (menu selectable): Open Collector NPN or 24 VDC voltage pulse

Nominal On Voltage: 24 VDC

Maximum Sink Current: 25 mA

Maximum Source Current: 25 mA

Maximum Off Voltage: 30 VDC

Saturation Voltage: 0.4 VDC

Pulse Duration: User selectable

Pulse output buffer: 8 bit

Fault Protection

Reverse polarity:

Shunt Diodes

Over-current Protected

Over-voltage Protected

# FP 93B Flow Processor

## Real Time Clock

The Flow Processor is equipped with a non-volatile real time clock with display of time and date.

Format:

24 hour format for time

Day, Month, Year for date

Optional Daylight Savings Time

## UTM10 Series Ultrasonic Transit-time Flowmeters

### Description

UTM10 ultrasonic flow and energy meters clamp onto the outside of pipes and do not make contact with the internal liquid. The technology has inherent advantages over alternate devices including: low-cost installation, no pressure head loss, no moving parts to maintain or replace, no fluid compatibility issue, and a large, bi-directional measuring range that ensures reliable readings even at very low and high flowrates. UTM10 is available in a variety of configurations that permit the user to select a meter with features suitable to meet particular application requirements.

The UTM10 is available in two versions: a stand-alone flowmeter, and an energy flowmeter used in conjunction with dual clamp-on, or dual insertion RTDs. The energy flowmeter measures energy usage in kJ, Wh, BTU and Tons and is ideal for retrofit, chilled water and other HVAC applications.

#### General Safety

#### Hazardous Location Installation

### Features

- May be used to measure clean liquids as well as those with small amounts of suspended solids or aeration (e.g.: surface water, sewage).
- Bi-directional flow measurement system. Totalizer options include forward, reverse and net total.
- Modbus RTU, BACNet® MS/TP over RS485 communications.; Ethernet connection includes BACNet®/IP, EtherNet/IP™ and Modbus TCP/IP protocols.
- Large, easy-to-read digital display.
- Rugged, aluminium enclosure ensures a long service life in harsh environments.
- Certified for hazardous area installation in Europe and North America.

### Benefits

- **Reduced material costs:** The clamp-on sensor eliminates the need for in-line flanges, pipe fittings, strainers, and filters.
- **Reduced installation time:** The UTM10 can be installed and fully operational within minutes.
- **Reduced maintenance costs:** The UTM10 has a non-mechanical operation it will not be subject to wear and tear – Consequently there are no repair kits or replacement parts available or required.
- The UTM10 is a clamp on design unit - Consequently there is **No need to shut down the process for installation or maintenance.**

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

## Ultrasonic Transit-time Flowmeters

### Specifications

System	
<b>Liquid types</b>	Most clean liquids or liquids containing small amounts of suspended solids or gas bubbles
<b>Velocity range</b>	Bi-directional to 12 m/s (40 ft/s)
<b>Flow accuracy</b>	<b>UTT10-050S, UTT10-050L and UTT10-050H:</b> ±1% of rate at flows >0.3 m/s (1 ft/s); ±0.003 m/s (0.01 ft/s) at flows <1 ft/s (0.3 m/s)
	<b>UTT10-025S and UTT10-040S:</b> 25 mm (1") and larger ±1% of rate from 1.2 to 12 m/s (4 to 40 ft/s); ±0.012 m/s (0.04 ft/s) at rates <1.2 m/s (4 ft/s) <b>UTT10-015S and UTT10-020S:</b> ±1% Full-scale (reference the 'Measuring range' under 'Dimensions' on page 3)
<b>Temperature accuracy (Energy meters only)</b>	<b>Option 1:</b> 0-50°C (32-122°F); Absolute: 0.12°C (0.22°F) Difference: 0.05°C (0.09°F)
	<b>Option 2:</b> 0-100°C (32-212°F); Absolute: 0.25°C (0.45°F) Difference: 0.10°C (0.18°F)
	<b>Option 3:</b> -40-177°C (-40-350°F); Absolute: 0.60°C (1.10°F) Difference: 0.25°C (0.45°F)
<b>Sensitivity</b>	<b>Flow:</b> 0.0003 m/s (0.001 ft/s) <b>Temperature:</b> <b>Option 1:</b> 0.012°C (0.03°F); <b>Option 2:</b> 0.025°C (0.05°F); <b>Option 3:</b> 0.06°C (0.1°F)
<b>Repeatability</b>	0.5% of reading
<b>Installation compliance</b>	<b>General safety:</b> <b>All models</b> EN 61010, UL 61010-1 and CSA C22.2 No. 61010-1
	<b>Power supply options A and D only</b> EN 61010-1
<b>Hazardous location</b> (power supply options A and D only): Class 1 Div. 2 Groups C,D,T4; Class II, Division 2, Groups F,G,T4; Class III Division 2 for US/CAN; ATEX II 2 g EX nAT4: UL 1604, CSA 22.2 No. 213, EN 60079-0 and EN 60079-15. Compliant with directives 2004/108/EC, 2006/95/EC, and 94/9/EC on flowmeter systems with transducers constructed with twinaxial cable (all transducers with cables 30 m (100 ft) and shorter) or remote transducers with conduit.	
Transmitter	
<b>Power requirements</b>	<b>ac:</b> 95-264 Vac 47-63 Hz @ 17 VA maximum <b>dc:</b> 10-28 Vdc @ 5 VA maximum <b>or</b> 20-28 Vac 47-63 Hz @ 0.35 A maximum <b>Protection:</b> auto resettable fuse, reverse polarity and transient suppression
<b>Display</b>	<b>Two line LCD, LED backlight:</b> <b>Top row</b> 18 mm (0.7") height, 7-segment; <b>Bottom row</b> 9 mm (0.35") height, 14-segment <b>Icons:</b> RUN, PROGRAM, RELAY1, RELAY2
	<b>Flowrate indication:</b> 8-digit positive, 7-digit negative maximum; auto decimal, lead zero blanking <b>Flow accumulator (totalizer):</b> 8-digit positive, 7-digit negative maximum (reset via keypad press, USP, network command or momentary contact closure)
<b>Enclosure</b>	<b>IP65 (Type 4) construction:</b> powder-coated aluminium, polycarbonate, stainless steel, polyurethane, nickel-plated steel mounting brackets <b>Size (electronic enclosure only):</b> W x H x D in mm (inches) 152 x 112 x 56 mm (6.0" x 4.4" x 2.2") <b>Conduit holes: (2 x holes)</b> 12.7 mm (½") NPT female; <b>(1 x hole)</b> 19 mm (¾") NPT female
<b>Temperature</b>	-40°C to +85°C (-40°F to +185°F)
<b>Configuration</b>	Via optional keypad or PC running USP software (Note: not all configuration parameters are available from the keypad – i.e. flow and temperature calibration and advanced filter settings)
<b>Engineering units</b>	<b>Flowmeter:</b> Metres, cubic metres, litres, million litres, kg, Feet, gallons, cubic feet, million gallons, barrels (liquor and oil), acre-feet, lbs. <b>Energy meter:</b> kJ, kWh, MWh, BTU, MBTU, MMBTU, Tons and the flowmeter list from above
<b>Inputs/outputs</b>	<b>USB 2.0:</b> for connection of a PC running USP configuration utility
	<b>RS485:</b> Modbus RTU command set. <b>Optional BACnet MS/TP</b> (Baud rate field selectable 9600 to 76800)
	<b>10/100 Base-T:</b> RJ45, communication via Modbus TCP/IP, EtherNet/IP™ and BACnet®/IP
	<b>4-20 mA:</b> 12-bit, internal power, can span negative to positive flow/energy rates <b>Flowmeter model only:</b> 0-1,000 Hz: open-collector, 12-bit, can span negative to positive rates; square-wave or turbine meter simulation outputs. <b>Energy flowmeter model only:</b> Total pulse option: Opto isolated open collector transistor. <b>Two alarm outputs:</b> open-collector, configure as rate alarm, signal strength alarm or totalizer pulse
Transducers	
<b>Type</b>	Compression mode propagation, clamp-on
<b>Construction</b>	<b>UTT10-050S and 050L:</b> IP67 (NEMA 6), CPVC, Ultem®, Nylon cord grip, PVC cable jacket; -40 to 121°C (-40 to 250°F)
	<b>UTT10-015S to UTT10-040S:</b> IP67 (NEMA 6), CPVC, Ultem®, Nylon cord grip, PVC cable jacket; -40 to 121°C (-40 to 50°F)
	<b>UTT10-050S and 050L:</b> IP68 (NEMA 6P), CPVC, Ultem®, Nylon cord grip, Polyethylene cable jacket; -40 to 121°C (-40 to 250°F)
	<b>NEMA 6:</b> Submersible to a depth of 1 m (3 ft) for 30 days max. <b>NEMA 6P:</b> Submersible to a depth of 30 m (100 ft) indefinitely
<b>UTT10-050H:</b> IP67 (NEMA 6), PTFE, Vespel, Nickel-plated brass cord grip, PFA cable jacket; -40 to 176°C (-40 to 250°F)	
<b>Frequency</b>	<b>UTT10-015S to UTT10-040S:</b> 2 MHz
	<b>UTT10-050S and UTT10-050H:</b> 1 MHz
	<b>UTT10-050L:</b> 500 KHz
<b>Cables</b>	RG59 Coaxial, 75 ohm or Twinaxial, 78 ohm (optional Flex armored conduit)
<b>Cable length</b>	300 m (990 ft) maximum in 3 m (10 ft) increments
<b>RTDs</b>	<b>Energy meters only:</b> RTD platinum 385, 1000 ohm, 3-wire; PVC jacket cable
<b>Installation</b>	<b>UTT10-050S, UTT10-050L and UTT10-050H:</b> General and Hazardous Location (see 'Installation compliance' above) <b>UTT10-050S and IS Barrier (F option):</b> "Class I Div 1, Groups C&D T5 Intrinsically Safe Exia;" "CSA C22.2 No.'s 142 & 157, UL 913 & 916"
Software utilities	
<b>USP</b>	Utilized to configure, calibrate and troubleshoot Flow and Energy Meters. Connection via USB A/B cable; software is compatible with Windows 95, Windows 98, Windows 2000, Windows XP, Windows Vista® and Windows® 7 32-bit O.S. only

Flow Measurement

# UTM10 Series

## Ultrasonic Transit-time Flowmeters

### Meter with remote flow transducer

The UTM10 is available with remote mounted transducers that permit separation of up to 300 m (990 ft) using coaxial or twinaxial cable. This design is utilized when pipes are located in areas that are not convenient for viewing, or on piping systems with severe vibration. CPVC are rated to 121°C (250°F) and PTFE are rated to 176°C (350°F).

### Common features:

- Rate-Total backlit display
- 4 - 20 mA output
- 0 - 1000 Hz rate pulse and dual alarm outputs (Flowmeter model only)
- USB programming port
- RS485 Modbus network connection
- Remote totalizer reset

UTM10 energy meter with remote mounted transducers and strap-on RTD's

### How to order the Ultrasonic Transit-time Flowmeter

Category	Description	Suffix codes
Model - see Note 1	Velocity meter	UTM10-S
	Energy meter - see Notes 2 and 3	UTM10-E-
Electrical power	<b>dc</b> 10 - 28 Vdc @ 5 watts maximum	<b>D</b>
	<b>ac</b> 95 - 264 Vac, 47 to 63 Hz @ 17 VA maximum	<b>A</b>
Digital communications	20 - 28 Vac, 47 to 63 Hz @ 17 VA maximum	<b>C</b>
	<b>STD - Modbus RTU</b> - see Note 1	<b>N</b>
	BACnet MS/TP	<b>B</b>
	10/100 Base-T (Ethernet/IP, BACnet/IP, Modbus TCP/IP), <b>BACnet MS/TP</b>	<b>C</b>
Energy temperature range	10/100 Base-T (Ethernet/IP, BACnet/IP, Modbus TCP/IP), <b>Modbus RTU</b>	<b>E</b>
	Totalizing pulse (Isolated open collector) - see Note 3	<b>P</b>
	None, if selected Electronics Model UTM10-S only	<b>0</b>
	Model 0 to 50°C (32 to 122°F)	<b>1</b>
	UTM10-E only 0 to 100°C (32 to 212°F)	<b>2</b>
Approvals	-40 to 176°C (-40 to 350°F)	<b>3</b>
	General Safety	<b>N</b>
Example	General Safety, Hazardous Location and CE	<b>F</b>
	See the 'Specifications' section under 'Installation compliance'	<b>UTM10-E-A-N-3-N</b>

### Notes:

1. All electronics have a 4 button keypad, remote mounted transducers, General Safety Approvals, 4-20 mA output, Modbus RTU output, USB connection, 1000 Hz output UTM10-S only.
2. Energy, 4-20 mA output, Dual 1000 Ohm RTD connection, Modbus RTU output, USB connection. **RTD's ordered separately.**
3. Totalizing pulse is for the Energy Option only. The pulse is an optically-isolated open-collector, 30 Vdc max., 100 mA max., at 15 Hz max. rate with 50% duty cycle.

**Notes:**

<sup>1</sup> Armored Flex conduit can be ordered with conduit option A and V only.

<sup>2</sup> Twinaxial Cable, 78 Ω up to 30 m (100 ft), Greater than 30 m (100 ft) RG59 Coaxial Cable, 75 Ω

**Flow Measurement**

# UTM10 Series Ultrasonic Transit-time Flowmeters

Accessories	P/N	Description	
Strap-on RTD kit	URTD-C-20	<b>Please note:</b> When ordering the UTM10-E you must also order the RTD kit.	
	URTD-C-50		
	URTD-C-100		
		6 m (20 ft) cable	
		Clamp on RTD	15 m (50 ft) cable
			30 m (100 ft) cable

**Note:** That the strap-on RTD kit includes 2 RTDs, heat sink compound, and installation tape. RTDs are 1000 Ω Pt., Insert 205°C (400°F).

Insertion RTD kit	INS-RTD-C-20	Insertion RTD	6 m (20 ft) cable
	INS-RTD-C-50		15 m (50 ft) cable
	INS-RTD-C-100		30 m (100 ft) cable

**Note:** That the insertion RTD kit includes 2 RTDs, 76 mm (3") insertion depth. 6.35 mm (¼") O.D.. RTDs are 1000 Ω Pt, 260°C (500°F).

Mounting tracks	UTMT-10	254 mm (10")	Scaled transducer mounting track assembly
	UTMT-16	406 mm (16")	

**Note:** For UTT10-050S transducers only

### How to order example:

- 1 off Spirax Sarco UTM10-E-A-N-3-N ultrasonic transit-time flowmeter plus
- 1 off URTD-C-20 clamp-on RTD with 6 m cables.
- and
- 1 off Spirax Sarco UTT10-050SX020N000S ultrasonic transit-time transducer.

Flow Measurement

## Model MAGFLO®

# Sensor Model Mag 1100, MAG 1100 Food and MAG 3100 Signal Converter Model MAG 6000 and MAG 5000 MAG 5100 W

### Description

MAGFLO® electromagnetic flowmeters employ Faraday's law to measure the volumetric flow rate of conductive liquids. Spirax Sarco offers a wide variety of electromagnetic flowmeters. In addition to standard meters for typical applications, we have specialized meters, like our sanitary MAG 1100 FOOD—for application-specific flow measurement.

### Features

#### 6000 signal converter (electronics)

- 0.25% accuracy
- Compact and practical design
- User-friendly design
- SENSORPROM™ Technology
- Bidirectional measurement
- Self-diagnostic
- Backlit display
- HART protocol available
- Empty Pipe Cut-Off
- Batch Control Function
- Electrode Cleaning available

#### 5000 same features as 6000 except

- 0.5% accuracy
- Less Batch Control Function

#### 1100 sensor

- Universal sensor
- High liquid temperature
- Withstands rigorous cleaning
- Food version
  - 3A and FDA approved
  - Steam CIP cleanable
  - Withstands rigorous cleaning
  - Sanitary Design
  - Tri-clamp connections
- Line sizes
  - Standard: 1/4" to 4"
  - High temperature: 1/2" to 4"
  - Food: 3/8" to 4"
  - Wafer connection

#### 3100 sensor

- Line Sizes: 1/2" to 80"
- Several Liner and Electrode Materials Available
- NEMA 6 (Accidental Submersible)
- Flange Connection

#### 5100 W

- DN 25 to DN 1200 (1" to 48")
- Connection flanges EN 1092-1 (DIN 2501), ANSI, AWWA and AS.
- Ebonite Hard Rubber liner for all water applications
- Drinking water EPDM liner with approvals
- Hastelloy integrated grounding and measuring electrodes
- Increased low flow accuracy for water leak detection, due to coned liner design.
- Drinking water approvals
- Suitable for direct burial and constant flooding
- Build-in length according to ISO 13359
- Easy commissioning, SENSORPROM unit automatically uploads calibration values and settings.
- Designed that patented in-situ verification can be conducted. Using SENSORPROM fingerprint.

### Applications

MAGFLO® electromagnetic flowmeters offer important advantages such as no pressure drop, no moving parts, high accuracy, and a wide variety of materials of construction. They have been successfully used in many industries including food, beverage, pharmaceutical, chemical, power, heat, pulp & paper, steel and water treatment. No maintenance, low cost of ownership, and high reliability make MAGFLO® the flowmeter of choice for many flow measurement applications.

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

# Model MAGFLO®

## Sensor Model Mag 1100, MAG 1100 Food and MAG 3100 Signal Converter Model MAG 6000 and MAG 5000 MAG 5100 W

### Performance Specifications

#### Mag 6000 signal converter

##### Accuracy

- Better than  $\pm 0.25\%$  of rate

##### Compact and practical design

The NEMA 6 signal converter can be installed either integrally on the sensor or remote on a wall or pipe. Front and back panel NEMA 4x converters are also available as an option.

##### User-friendly design

Alphanumeric display

Electronic unit and display can be rotated for easy viewing.

##### Sensorprom™ technology

Easy to start up—sensor data is downloaded from the SENSORPROM™ located in the terminal box to the signal converter. After power failure or converter replacement, all settings are automatically downloaded from the SENSORPROM™ to the MAG 5000—no need for reprogramming.

##### Self-diagnostic

Operating malfunctions are indicated in the display and error relays are activated. The last 10 errors are stored in Error Pending and Error Log.

##### Backlit display

##### Hart protocol available

##### Electrode cleaning

Converter can control an optional external electrode cleaning unit—output and display values are maintained during cleaning.

##### Bidirectional

Flow can be measured in both forward and reverse directions using a relay output to indicate direction changes.

##### Empty-pipe cut-off

If the sensor is drained, the converter automatically suppresses the input and indicates zero flow.

##### Batch function

#### Mag 5000 signal converter

##### Accuracy

$\pm 0.5\%$  of rate

##### Compact and practical design

The NEMA 6 signal converter can be installed either integrally on the sensor or remote on a wall or pipe. Front and back panel NEMA 4x converters are also available as an option.

##### User-friendly design

Alphanumeric display

Electronic unit and display can be rotated for easy viewing.

##### Sensorprom™ technology

Easy to start up—sensor data is downloaded from the SENSORPROM™ located in the terminal box to the signal converter. After power failure or converter replacement, all settings are automatically downloaded from the SENSORPROM™ to the MAG 5000—no need for reprogramming.

##### Bidirectional

Flow can be measured in both directions with two internal totalizers.

##### Self-diagnostic

Operating malfunctions are indicated in the display and error relays are activated. The last 10 errors are stored in Error Pending and Error Log.

##### Backlit display

##### Hart protocol available

## Sensor Model Mag 1100, MAG 1100 Food and MAG 3100 Signal Converter Model MAG 6000 and MAG 5000 MAG 5100 W

### Mag 1100 sensor

(standard, high temp and food)

*Universal sensor*

Ceramic Liner with platinum electrodes

*High liquid temperature*

Standard 302° F, optional 390° F

*Withstands rigorous cleaning*

External construction in stainless steel, and enclosure meets NEMA 6 (accidental submersible), and can be steam cleaned.

*Food version*

- 3A and FDA approved
- Steam CIP cleanable
- Withstands Rigorous Cleaning:
  - External construction in stainless steel.
  - Enclosure meets NEMA 6 (accidental submersible).
- Sanitary Design:
  - The electrodes are fused into the ceramic liner
  - no crevices where bacteria can grow
- Tri-clamp connections

*Line sizes*

- Standard: 1/4" to 4"
  - High temperature: 1/2" to 4"
  - Food: 3/8" to 4"

### Mag 3100 sensor

*Line sizes:*

1/2" to 80"

*Several liner and electrode materials available*

See following pages for selection

*Nema 6 (accidental submersible)*

Can easily be upgraded to NEMA 6P (continuously submersible to 30 ft of water)

*Fully welded sensor construction*

*Flange version*

ANSI Class 150, 300 or AWWA class D

### Mag 5100W

- DN 25 to DN 1200 (1" to 48")
- Connection flanges EN 1092-1 (DIN 2501), ANSI, AWWA and AS.
- Ebonite Hard Rubber liner for all water applications
- Drinking water EPDM liner with approvals
- Hastelloy integrated grounding and measuring electrodes
- Increased low flow accuracy for water leak detection, due to coned liner design.
- Drinking water approvals
- Suitable for direct burial and constant flooding
- Build-in length according to ISO 13359
- Easy commissioning, SENSORPROM unit automatically uploads calibration values and settings.
- Designed that patented in-situ verification can be conducted. Using SENSORPROM fingerprint.

## Sensor Model Mag 1100, MAG 1100 Food and MAG 3100 Signal Converter Model MAG 6000 and MAG 5000 MAG 5100 W

	<b>MAG 3100</b>
<b>Type</b>	Sensor with flanges
<b>Nominal Size</b>	1/2" to 80"
<b>Measuring Range</b>	Adjustable from 0-0.8 ft/s to 0-33 ft/s
<b>Coil Current</b>	Pulsating DC with one of the following frequencies: 6 1/4 Hz or 12 1/2 Hz depending on sensor size
<b>Process Temperature (Pressure ≤ 580 psi)</b>	Neoprene: 32° to 158° F      Linatex Rubber: -40° to 160° F
	PTFE®: -5° to 266° F **      Ebonite: 32° to 200° F
	High Temp PTFE 0 to 355° F      EPDM: -15 to 158° F
<b>Ambient Temperature</b>	Remote Signal Converter      -40° F to 210° F
	Integral Signal Converter      -40° F to 120° F
<b>Pipe Connection</b>	
Standard	1/2" to 24" ANSI B 16.5 Class 150 28" to 80" AWWA C-207 Class D (150 psi)
Option	1/2" to 24" ANSI B 16.5 Class 300 Others on request
<b>Process Vacuum</b>	Maximum process vacuum depends on liner material: Neoprene, Ebonite, EPDM, Natural rubber: 7.25 psia
<b>Liner</b>	
Standard	Neoprene
Option	Teflon®, Natural rubber, EPDM, Ebonite
<b>Electrodes</b>	
Standard	Stainless steel 316 Ti
Option	Hastelloy C276, Platinum, Titanium, Monel, Tantalum, AISI 316Ti coated
<b>Enclosure</b>	
Standard	Carbon steel, corrosion-resistant two-component coating
Option	Stainless steel AISI 316
<b>Measuring Pipe</b>	Stainless steel AISI 304
<b>Enclosure Rating</b>	
Standard	NEMA 6 accidental submersible (tested to 10 ft of water 72h)
Option	NEMA 6 submersible, tested to 30 ft of water (no time limit if NEMA 6P submersible kit is being used)
<b>Cable Entries</b>	2 Pg 13.5-2 others available
<b>Mechanical Load Design Pressure</b>	3 G, 1-800 Hz sinusoidal in all directions 1.5 x flange rating
<b>Conductivity</b>	
Compact installation	Liquids with an electric conductivity ≥ 5 µs/cm For a conductivity between 1 and 5 µs/cm, the accuracy may degrade to ±0.5% of actual flow.
Remote installation	<div style="display: flex; justify-content: space-around;"> <div style="text-align: center;"> <p><b>Standard Cable</b></p> </div> <div style="text-align: center;"> <p><b>Special Cable</b></p> </div> </div> <p>Note: For detection of empty sensor the min. conductivity must always be ≥ 20 µs/cm and the max. length of electrode cable when remote mounted is 150 ft. Special cable must be used.</p>

\* -5 to 120° F with signal converter mounted on sensor

\*\* Each temperature class assumes a maximum ambient temperature of 105° F.

## Sensor Model Mag 1100, MAG 1100 Food and MAG 3100 Signal Converter Model MAG 6000 and MAG 5000 MAG 5100 W

### MAG 3100 Liner Selection Guide

Liner	Applications
Neoprene	General purpose, sewage, drinking water and district heating
EPDM	Drinking water, sea water
PTFE	Agressive chemicals, paper and pulp, high temperature applications
Linatex®	Abrasive media and mining slurries
Ebonite	Drinking water, high pressure applications and district heating

### Electrode Selection Guide

Electrodes	Applications
AISI 316 Ti	General purpose, water, sewage and district heating
AISI 316 Ti Ceramic coated	High content of fibres, paper pulp
Hastelloy C-276	Good chemical proproperties, sea water
Monel	Salt, brine and alkaline solutions
Titanium	Chlorine, chlorite, nitric and chromic acids. Textile bleaching industry
Tantalum	Almost any acid solution
Platinum and platinum/irridium	The ultimate electrode material. Unaffected by most liquids

## Sensor Model Mag 1100, MAG 1100 Food and MAG 3100 Signal Converter Model MAG 6000 and MAG 5000 MAG 5100 W

**MAGFLO® Cleaning Unit**

**Application** For use with MAG 6000 and MAG 5000 19" insert to clean the electrodes on MAG 1100 and MAG 3100.

**Cleaning Voltage**

AC	cleaning: 60 V a.c.
DC	cleaning: 30 V d.c.

**Cleaning Period** 60 sec + 60 sec. pause period

**Relay** Switch relay indicating cleaning in progress

Load: 42 V/2A

**Indicator Lamps** LEDs: "ON" and "CLEANING"

**Supply Voltage**

AC	115/230 V AC +10% to -15%, 50-60 Hz, 7 VA cleaning, 5 VA stand by
DC	18-30 V DC, 17 W cleaning, 3 W stand by

**Ambient Temperature**  
During operation: -5 to 120° F  
During storage: -5 to 160° F

**19" insert**  
19" insert for MAG 6000 and MAG 5000 in either a front, back or wall mount unit  
Enclosure material: Standard 19" insert in Aluminum/steel  
Enclosure rating: NEMA 1; if front or wall mount kit is used: NEMA 4X  
Mechanical load: 1 G, 1-800 Hz sinusoidal in all directions

MAG 6000 can be MAG 5000 can be mounted with the Cleaning Unit. The electronic package can be mounted in either a wall, front, or back panel unit.

### AC Cleaning

AC Cleaning is used to remove greasy deposits on the electrodes caused from measurement of waste water flows from abattoirs or water containing oil residues. During cleaning, heat is generated on the electrode surface, softening the greasy particles. This causes gas bubbles which remove the deposits from the electrode surface.

### DC Cleaning

DC cleaning is used to remove conductive deposits from the meter pipe. When measuring district heating water flows, conductive magnetite deposits can accumulate. If the water's conductivity is below approx. 250µS/cm, these deposits can short the electrode signal and cause measuring error. This cleaning method involves electrolysis in which the electron flow leads the deposited particles away from the area around the electrodes.

Flow Measurement

# Model MAGFLO®

## Sensor Model Mag 1100, MAG 1100 Food and MAG 3100 Signal Converter Model MAG 6000 and MAG 5000 MAG 5100 W

### Sensor size selection guide

The table shows the relationship between flow velocity  $V$ , flow quantity  $Q$ , and sensor size.

### Guidelines for selection of sensor

Min. measuring range: 0-0.8 ft/s

Max. measuring range: 0-33 ft/s

Normally the sensor is selected with a nominal flow in the measuring range of 3-5 ft/s.

Flow Measurement

# Model MAGFLO®

## Sensor Model Mag 1100, MAG 1100 Food and MAG 3100 Signal Converter Model MAG 6000 and MAG 5000 MAG 5100 W

### Accuracy

Meter uncertainty under reference conditions (display/frequency/pulse output)

V: Actual flow velocity [ft/sec]  
E: Meter uncertainty as a percentage of actual flow

V: Actual flow velocity [ft/sec]  
E: Meter uncertainty as a percentage of actual flow

Other Accuracy Statements	
<b>Current output</b>	Pulse output: $\pm(0.1\%$ of actual flow +0.05% FSO)
<b>Effect of ambient temperature</b>	Display/frequency/pulse output: < $\pm 0.003\%$ / Kelvin
	Current output: < $\pm 0.005\%$ / Kelvin
<b>Effect of supply voltage</b>	< 0.005% of measuring value on 1% change
<b>Repeatability</b>	$\pm 0.1\%$ of actual flow for $V \geq 1.5$ ft/s

### Inlet and outlet conditions

For accurate flow measurement, it is essential to have sufficient straight run of inlet and outlet pipes, and a certain distance between pumps and valves.

It is also important to center the flowmeter in relation to the pipe flanges and gaskets.

Reference Conditions (ISO/DP9104)	
<b>Temperature of medium</b>	68° F $\pm 4$ °F
<b>Ambient temperature</b>	68° F $\pm 4$ °F
<b>Supply voltage</b>	Un $\pm 1\%$
<b>Warm-up time</b>	30 min
<b>Incorporation in pipe section in accordance with reference conditions (ISO)</b>	Inlet section 10 x DN
	Outlet section 5 x DN
	Sensor optimally grounded and centered
	For further information contact Spirax Sarco
<b>Flow conditions</b>	Fully developed flow profile

Type C flanges for liners of neoprene, EPDM, linatex® and ebonite.

Type E flanges for liners of PTFE. MAG 3100 high temperature (PTFE) is always equipped with 2 pcs. type E earthing flanges.

- 0.5" shorter with AISI terminal box (Ex and high temperature)
- When earthing flanges are used the thickness of the earthing flange must be added to the built-in length
- T<sub>C</sub> = Type C grounding ring, T<sub>E</sub> = Type E grounding ring
- Weights are approx and for ANSI 150 without signal converter.

D = Outside diameter of flange, see flange tables

## MAGFLO MAG 5100 W

### Benefits

- DN 25 to DN 1200 (1" to 48")
- Connection flanges EN 1092-1 (DIN 2501), ANSI, AWWA and AS.
- Ebonite Hard Rubber liner for all water applications
- Hastelloy Integrated grounding and measuring electrodes
- Increased low flow accuracy for water leak detection, due to coned liner design.
- Drinking water approvals
- Suitable for direct burial and constant flooding
- Build-in length according to ISO 13359
- Easy commissioning, SENSORPROM unit automatically up-loads calibration values and settings
- Designed that patented in-situ verification can be conducted. Using SENSORPROM fingerprint.

### Application

The main applications of the MAGFLO electromagnetic flow sensors can be found in the following fields:

- Water abstraction
- Water treatment
- Water distribution network (leak detection management)
- Custody transfer water meters
- Irrigation
- Waste water treatment
- Filtration plant (e.g. reverse osmosis and ultra filtration)
- Industrial Water applications

### Mode of operation

The flow measuring principle is based on Faradays law of electromagnetic Induction were the sensor converts the flow into an electrical voltage proportional to the velocity of the flow.

### Function

- Highly resistant to a wide range of chemicals
  - OIML R49 and PTB approved
  - Conforms to ISO 4064 and EN 14154
  - MI-0001 Custody Transfer approval for billing
- Meets EEC directives: PED, 97/23/EC pressure directive for #N 1092-1 flanges
- Simple onsite of factory upgrade to IP68/NEMA 6P of standard sensor.

### Integration

The complete flow meter consists of a flow sensor and an associated transmitter MAGFLO MAG 5000 or MAG 6000

Flow Measurement

# Boiler Controls

for level control/alarm and TDS control.

Accurate control of water level/alarm within the boiler or tank while maintaining the proper TDS level of the boiler water, are vital in the boiler room.

## LP 10-4 Level Probe

### Description

The Spirax Sarco LP10-4 level probe is used with Spirax Sarco LC1300 series level controllers to provide on / off level control and alarm functions in steam boilers, tanks or other vessels.

The four tip probe is particularly suitable where 3-lamp 'electric gauge glass' alarm/ level indicators are fitted. The probe body is grounded through its screwed connection and the boiler or tank normally forms the ground return path. The probe may also be used in concrete or plastic tanks by using one of the tips as a ground return, or by providing a separate ground rod or plate. The LP10-4 probe has four detachable level sensing tips which are cut to length on installation to give the required switching levels. Note: Tips are ordered separately, and are 39" long. Two sets of tips may be connected for a maximum probe length of 82". When a tip is immersed in conductive liquid it completes an electrical circuit to ground. When the level drops below the tip, the resistance to ground becomes high, indicating to the controller that the tip is out of the liquid.

- Single probe provides all the controls needed on a tank
- Suitable for use with steam boilers up to 464 psig (32 barg)
- For level control and simple alarm duties
- Stainless steel and PFA wetted parts

### Approvals

The LP10-4 is also available with a 1" NPT screwed connection.

### Caution

**The probe is not suitable for outside installation without additional environmental protection.**

### Available tip lengths inches (mm)

Tips are 39.4" (1000 mm) long. Two sets of tips may be connected for a maximum probe length of 82.5" (2095 mm)

### Pressure / temperature limits

Nominal pressure rating	PN40
Maximum pressure	464 psig (32 barg)
Maximum temperature	462°F (239°C)
Maximum ambient temperature	158°F (70°C)
Minimum ambient temperature	-4°F (-20°C)

### Technical data

Protection rating	IP54
Maximum cable length (probe to controller)	98ft (30 m)
Maximum sensing depth	82.5" (2 095 mm)
Minimum sensing depth	3" (75 mm)
Minimum conductivity (when used with an LC1300 level controller)	1µS/cm @ 77°F (25°C)

### Materials

No.	Part	Material
1	Probe body	Austenitic stainless steel Type 304L/ 1.4306
2	Probe tips	Austenitic stainless steel Type 316/ 316L
3	Tip insulation sleeving	PFA (Per Fluor Alkoxy)
4	Lower housing	PPS (Polyphenylene sulphide)
5	Upper housing	PPS (Polyphenylene sulphide)
6	Gland support pad	Thermoplastic elastomer
7	Cable gland	PA (Polyamide)
8	Tip steady	PEEK (Polyaryletherketone) Grade 450G

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-9-114-US 1.14

# LP 10-4 Level Probe

## Safety information

### WARNING

Your attention is drawn to Safety Information Leaflet IM-GCM-10, as well as to any National or Regional regulations.

This product is designed and constructed to withstand the forces encountered during normal use.

Use of the product for any purpose other than as a level probe could cause damage to the product and may cause injury or fatality to personnel.

This product contains materials including plastics which can give off toxic fumes if exposed to excessive heat. Additional environmental protection is needed for installation outdoors.

## Installation

This document does not contain sufficient information to install the product safely. See the Installation and Maintenance Instructions provided with every unit.

The LP10-4 is designed for installation in a 1" NPT threaded flange or cover. The probe tips are screwed to the probe body using the extension connectors and lock-nuts provided, then cut to length before installation to give the required switching levels. Tip steadies provide lateral support as well as insulation between the tips. For deep tanks/ boilers, the switching level may be extended to a maximum of 82" by fitting a second probe tip. A minimum 3" (80 mm) nominal bore protection tube is recommended if installing the probe in a boiler, or in a tank which is subject to very turbulent conditions.

## Wiring

Wiring is straightforward on the LP10-4, as crimp connectors are used. Extra connectors are available as a spares kit. Terminal posts are colour coded for easy identification.

The wiring loom may be disconnected and removed without disturbing the cable gland by lifting the gland carrier out of the lower housing.

## Maintenance

No special maintenance is required, though boiler water level controls do require periodic testing and inspection which is described in separate literature.

## Dimensions / weight (approximate) in inches and lbs.

A	B	C	D	Weight
2.4	1.0	3.0	2.0	2.5

## How to specify

Conductivity probe with austenitic stainless steel body and probe tips, PFA tip insulation, suitable for steam boiler operation up to 464 psig (462°F)

## How to order

Example: 1 of Spirax Sarco LP10-4 probe with 39" tip assembly.

## Available spares

### LP10-4 connector set (electrical)

Comprising: 6 flat crimp connectors and 2 ring crimps

### LP10-4 tip mounting kit

Comprising: 1 set of 4 tip connectors, 8 lock-nuts and 2-tip supports

## LP 20 Capacitance Level Probe

### Description

The Spirax Sarco LP20 is a capacitance probe designed for modulating level control in conductive liquids, in conjunction with a PA20 preamplifier, which is supplied separately. It can also be used for adjustable on/off control.

The LP20 may be used with one or more controllers or transmitters to provide level control, level alarms, and/or outputs to a building management system. The probe is normally installed in a steam boiler or metal tank where it is earthed through the 1/2" NPT screwed connection, the boiler or tank forming the earth return path.

It may be used in a non-conductive tank (e.g. plastic or concrete) if an earth rod is provided.

The PA20 preamplifier (described in separate literature), is screwed to the top of the probe and hand tightened, enabling easy removal without the need to disturb the probe.

### Approvals:

The LP20 is available with a 1/2" NPT screwed connection.

**Caution: The probe is not suitable for outside installation without additional environmental protection.**

### Available probe lengths (approximate) in inches

14.6, 18.5, 21.6, 23.6, 25.6, 29.5, 31.5, 35.4, 37.4, 41.3, 47.2, 53.1, or 59.1

**Note:** Probe length includes the 1" (25 mm) 'dead' length at its tip. **The probe must not be cut to length.**

### Pressure / temperature limits

Nominal pressure rating	(PN40)
Maximum pressure	464 psig (32 bar g)
Maximum temperature	462°F (239°C)
Ambient temperature	Maximum 158°F (70°C) Minimum 41°F (5°C)
Designed for a maximum cold hydraulic test pressure of 870 psig (60 bar g)	

### Technical data

Sensing depth	Probe length minus 1" (25 mm)
Minimum conductivity	5 µS/cm or 5 ppm

### Materials

No.	Description	Material
1	Probe body	Austenitic stainless steel BS EN 10088-3 (1.4306)
2	Cover assembly	Austenitic stainless steel Type 316L
3	Probe (sheathed)	Stainless steel ASTM A269 Gr. 316L tube
4	Probe sheathing	PTFE BS 6564 Grade UA Type 1
5	'O' ring	Nitrile rubber
6	Name-plate	Polycarbonate

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-P402-39-US 1.14

Probe length	14.6	18.5	21.6	23.6	25.6	29.5	31.5	35.4	37.4	41.3	47.2	53.1	59.1
Weight	1.8	1.8	2.0	2.1	2.2	2.3	2.5	2.7	2.9	3.1	3.3	3.6	3.7

## Safety information, installation and maintenance

This document does not contain sufficient information to install the system safely. See the Installation and Maintenance Instructions supplied with the probe for full details.

**Installation note: Do not install the probe outdoors without additional weather protection.**

The probe is installed in a 1/2" NPT female connection. If the probe is to be installed in a boiler shell or a turbulent tank, fit a protection tube. This should be as long as possible, and at least long enough to cope with expansion of the probe at higher operating temperatures. The Table below shows the maximum probe expansion possible 0 - 239°C.

Probe length in inches (mm)	Maximum expansion in inches (mm) (inc. 'dead' length)
14.6 (370)	0.4 (10)
18.5 (470)	0.5 (13)
21.6 (550)	0.5 (15)
23.6 (600)	0.6 (16)
25.6 (650)	0.7 (17)
29.5 (750)	0.8 (20)
31.5 (800)	0.8 (21)
35.4 (900)	0.9 (23)
37.4 (950)	1.0 (25)
41.3 (1050)	1.1 (27)
47.2 (1200)	1.2 (30)
53.1 (1350)	1.3 (34)
59.1 (1500)	1.5 (38)

**Do not cover the vent and drain holes on the body.**

### Maintenance note:

No special maintenance is required. Boiler water level controls and alarms do, however require periodic testing and inspection, which is described in separate literature.

### How to specify

Capacitance level probes shall be Spirax Sarco type LP20 with stainless steel body, cover assembly and probe, and PTFE probe insulation. They shall be suitable for modulating and on/off level control and be fitted with a screwed connection for attaching a Spirax Sarco PA20 preamplifier.

### How to order

**Example:** 1 off Spirax Sarco LP20 capacitance level probe with NPT connection. Probe length 18.5".

## PA 20 Pre-Amplifier

### Description

The PA20 preamplifier is used with a Spirax Sarco capacitance probe to amplify the capacitance measured and convert it to a voltage output proportional to the liquid level. It is compatible with all Spirax Sarco voltage input controllers/transmitters.

The preamplifier consists of a tubular austenitic stainless steel body which screws onto the top of the probe, and has a DIN 43650 connector. The connector includes a 1/2" NPT adaptor for connection to flexible conduit and four 18AWG flying leads. The PA20 has three sensitivity settings, selected to suit different probe lengths by wiring variations. These are fully described in the Installation and Maintenance Instructions supplied with the unit.

### Principal features:

- Compact, rigidly mounted.
- Can be removed/replaced without disturbing the probe.
- No maintenance needed.
- Suitable for all probe lengths.

### Approvals:

The PA20 is with a 1/2" NPT screwed connection.

**Please note that this version will not be marked and is not suitable for Europe.**

**Caution: The probe is not suitable for outside installation without additional environmental protection.**

### Limiting conditions

Maximum ambient temperature	158°F (70°C)
Maximum cable length	300 ft (100 m)

### Technical data

Supply voltage	15 - 36 Vdc
Maximum power requirement	10 mA
Output volts range	1 - 6 Vdc
Output impedance	100 Ω

### Voltage check graph

Voltage output characteristics/probe immersed lengths.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

### Dimensions (approximate) in inches (mm)

**Weight**  
approximately .6 lbs (0.25 kg)  
including packaging.

### Materials

No	Part	Material
1	Body	Austenitic stainless steel ASTM A582 303
2	Cable connector	Polyamide (Glass filled)
3	Connector gasket	Silicone rubber
4	'O' ring	Nitrile rubber

### Safety information, installation and maintenance

**This document does not contain sufficient information to install the product safely. See the Installation and Maintenance Instructions provided with each unit.**

#### Installation note:

The PA20 is screwed into the top of the capacitance probe and hand tightened. An 'O' ring is supplied to provide a seal. An 'O' ring is also supplied with the probe. Use only one 'O' ring. Note: Do not install the probe outdoors without additional weather protection.

#### Maintenance note:

No special maintenance is required. Boiler water level controls do, however, require periodic testing and inspection, which is described in separate literature.

#### Spare parts

There are no available spare parts for this unit.

### How to specify

Preamplifiers shall be Spirax Sarco type PA20 for use with Spirax Sarco capacitance probes. Preamplifiers shall have austenitic stainless steel bodies and a screwed connection, with a DIN 43650 connector.

### How to order

**Example:** 1 off Spirax Sarco PA20 preamplifier.

TI-P402-66-US 1.14

# LC1350 Level Controller

## Description

The Spirax Sarco LC1350 has two alarm channels that can be independently configured high or low to control the water level of a boiler, tank or vessel by operating a pump, valve or solenoid. It has been designed as an on/off level controller for use with the LP10-4 four-tip conductivity probe operating on supply voltages from 110 to 240 Vac.

The controller is suitable for use with virtually all qualities of conductive liquids from salt solutions or boiler water to condensate having an electrical conductivity as low as 1  $\mu\text{S/cm}$  at 25°C. (0.64ppm @ 77°F)

The LC1350 gives accurate and reliable control under the very different conditions found in vessels, tanks or high output boilers operating up to 32 bar @ 239°C. (464psig @ 462°F)

The front panel has a 3-digit LCD screen and moving segments that display the liquid level rising or falling along with a five-button keypad. The unit can be panel, DIN rail or chassis mounted.

### Principal features:

- Level controller with two configurable alarms.
- Universal power supply – 110 Vac to 240 Vac @ 50/60 Hz.
- TÜV approved.
- LCD shows level change direction.
- Interactive safety feature.
- Infrared comms.

### Approvals

This product complies with the Electromagnetic Compatibility Directive 2004 / 108 / EC and all its requirements.

The LC1350 is suitable for Class A Environments (e.g. industrial). A fully detailed EMC assessment has been made and has the reference number UK Supply BH LC1350 2008.

The LC1350 complies with the Low Voltage Directive by meeting the standards of:

- EN 61010-1:2010 safety requirements for electrical equipment for measurement, control, and laboratory use.

The LC1350 has been type-tested as a level control by meeting the standard:

- Vd TÜV requirements for water level control and limiting devices, Water Level 100 (07.2010).

## Application

Typical application example – on/off control of a feedtank:

- Pump on
  - Pump off
  - High alarm
  - Low alarm
- Note:** probes can be mounted in external chambers if boiler mounting is not possible.

## Function

### Inputs

The LC1350 input options are:

- High alarm or low alarm from a conductivity probe.
- Pump on/off control from two conductivity probes.

### Function / outputs

The controller reacts to a change in probe conductivity (open/closed circuit) and energizes / de-energizes a relay. This action switches a pump or sounds an alarm.

### Other features:

- Additional filters can be selected to increase the damping effect for turbulent conditions.
- To prevent unwanted or inadvertent changes being made, all commissioning parameters are protected with a fixed pass code.
- The product can communicate via an infrared link between adjacent boiler house controllers. It is designated as a slave unit.
- A panel mounted external test switch may be fitted if required.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

# LC1350 Level Controller

## Safety information, installation and maintenance

**Warning:** This document does not contain sufficient information to install the unit safely. The unit operates at a potentially fatal mains voltage. Before attempting to install the unit read the Installation and Maintenance Instructions supplied with it.

In most countries, steam boilers operating with limited supervision require two self-monitoring level probes and controllers to provide two independent low level alarms. A high level alarm is also advised, and is compulsory in some countries. The LC1350 is not self-monitoring.

**Do not** install the product outdoors without additional weather protection.

**Do not** attempt to open the product - it is sealed and has no replaceable parts or internal switches.

**Do not** cover or obstruct the infrared beam between products.

No special servicing, preventative maintenance or inspection of the product is required.

Boiler water level controls and level alarms do, however, require testing and inspection.

## Dimensions / weight (approximate) in mm and g.

Weight 430 g. (0.95 lb)

## LC2250 Level Controller

### Description

The Spirax Sarco LC2250 is a level controller for on/off or modulating control of conductive liquid levels.

The LC2250 has two alarm outputs that can be configured high or low.

The controller is suitable for use with liquids having an electrical conductivity of 5  $\mu\text{S}/\text{cm}$  or 5 ppm, when used with an LP20, PA20, or PA420 capacitance probe.

The LC2250 may be used on boilers, tanks, or vessels operating at up to 32 bar g at 239°C (464 psig@462°F).

The front panel has a 3 digit LCD display and a five-button keypad.

The unit can be panel, DIN rail, or chassis mounted.

### Principal features:

- Level controller for modulating or on/off control of boilers.
- Universal power supply – 110 Vac to 240 Vac @ 50/60 Hz.
- TÜV approvals.
- Alarm – high or low.
- Input filter for turbulent conditions.
- 0/4-20 mA retransmit.
- Infrared communications.

### Approvals

This product complies with the Electromagnetic Compatibility Directive 2004 / 108 / EC and all its requirements.

The LC2250 is suitable for Class A Environments (e.g. industrial). A fully detailed EMC assessment has been made and has the reference number UK Supply BH LC2250 2008.

The LC2250 complies with the Low Voltage Directive by meeting the standards of:

- EN 61010-1:2010 safety requirements for electrical equipment for measurement, control, and laboratory use.

The LC2250 has been type-tested as a level control by meeting the standard:

- Vd TÜV requirements for water level control and limiting devices, Water Level 100 (07.2010).

### Typical applications

#### On/off control:

- Pump control.
- Two alarm output.
- 4 - 20 mA level output.

**Note: A solenoid valve may be used instead of a pump.**

#### Modulating control:

Modulating valve control using valve motor drive or 4 - 20 mA control signals.

- Two alarm output.
- 4 - 20 mA level output.

**Note: The 4 - 20 mA level output is only available when the product is configured for valve motor drive systems.**

### Function

The product compares the input signals with the Set Point selected by the user. It then changes its output signal to control the water level in the boiler or tank.

### Inputs

The product has two inputs to accept the following signals:

- Level probe or transmitter 1 - 6 V or 4 - 20 mA.
- A 1 K potentiometer input ~ for Valve Motor Drive (VMD).

### Outputs

The output control signal can be configured / wired to work with a pump or a modulating control valve. It also provides a relay output for high or low level alarms and can provide an isolated 4 - 20 mA retransmission output.

### Other features:

- An additional filter can be selected to increase the damping effect for turbulent conditions.
- Commissioning parameters are protected with a pass code.
- The LC2250 can communicate via an infrared link between adjacent controllers. It enables the parameters to be passed to a product fitted with RS485 (User). The LC2250 is designated as a slave unit – no set-up or adjustment is needed. Important: Do not cover or obstruct the infrared beam between products.

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

### Safety information, installation and maintenance

This document does not contain sufficient information to install the unit safely. The unit operates at a potentially fatal mains voltage. Before attempting to install the unit read the Installation and Maintenance Instructions supplied with it.

The product must be installed in a suitable industrial control panel or fireproof enclosure to provide impact and environmental protection. A minimum of IP54 (EN 60529) is required.

The product may be installed on a DIN rail, a chassis plate, or in a panel cut-out. A bezel is supplied.

Install the product in an environment that minimizes the effects of heat, vibration, shock and electrical interference.

**Do not** install the product outdoors without additional weather protection.

**Do not** attempt to open the product - it is sealed and has no replaceable parts or internal switches.

**Do not** cover or obstruct the infrared beam between products.

No special servicing, preventative maintenance or inspection of the product is required.

Boiler water level controls and level alarms do, however, require testing and inspection.

## LC2650 Level Controller

### Description

The Spirax Sarco LC2650 is a level controller for conductive liquids.

It provides on/off or modulating control of liquid levels in boilers, tanks, and vessels operating up to 32 bar at 239°C (464 psi@462°F).

It has two alarm channels that can be independently configured either high or low.

The controller is suitable for use with liquids having an electrical conductivity as low as 5 µS/cm or 5 ppm (when used with an LP20 or PA20 capacitance probe).

The front panel has an LCD screen and a five-button keypad. The LCD display screen can show either operating information (in run mode), or a trend graph that displays a record of the variation in level over a set time.

In run mode the general data is shown on several consecutive screen displays.

A test function provides the operator with a diagnostic feature. Inputs can be measured and outputs can be set from the front panel.

To prevent unwanted or inadvertent changes being made, all commissioning parameters are protected with a pass code. The LC2650 can communicate via an infrared link between adjacent controllers.

It can be designated as either a master unit or a slave unit. The LC2650 can be panel, DIN rail or chassis mounted.

### Principal features:

- Modulating or on/off control of boiler water level using a capacitance probe.
- Switchable integral action.
- Single, two or three-element control.
- LCD graphics display and five-button keypad.
- Graphic display of status, PV percentage, and alarm, plus a trend graph.
- Infrared communication.
- EIA 485/Modbus communications.

### Approvals

This product complies with the Electro magnetic Compatibility Directive 2004 / 108 / EC and all its requirements.

The LC2650 is suitable for Heavy Industrial environments. A fully detailed EMC assessment has been made and has the reference number UK Supply BH LC2650 2008.

The LC2650 complies with the Low Voltage Directive by meeting the standards of:

- EN 61010-1:2010 safety requirements for electrical equipment for measurement, control, and laboratory use.

The LC2650 has been type-tested as a level control by meeting the standard:

- Vd TÜV requirements for water level control and limiting devices, Water Level 100 (07.2010).

### Applications

The product can be configured to control the level of a boiler, tank or vessel, by operating a pump, valve or solenoid. Typical applications:

### On/off control:

- Pump control.
- Two alarm outputs.
- 4 - 20 mA level output (isolated).

**Note: A solenoid valve may be used instead of a pump.**

### Modulating control:

Modulating valve control using valve motor drive or 4 - 20 mA control signals.

- Two alarm outputs.
- 4 - 20 mA level output (isolated).

### Two or three element modulating control:

Modulating valve control using a valve motor drive or 4 - 20 mA control signal.

- Two alarm outputs.
- 4 - 20 mA level output (isolated).
- Feedback from steam flowmeter.
- Feed forward from water flowmeter.

### Inputs / Function

The product compares the input signals with the set point selected by the user. It then changes its output signal to control the water level in the boiler or tank.

### Outputs

The product control signal can be configured / wired to work with a pump or a modulating control valve. It also provides relay outputs for high and low level alarms and can provide an isolated 0 - 20 mA or 4 - 20 mA retransmission output.

Parameters can be remotely accessed via the RS485 / MODBUS communications.

### Other features

An additional filter can be selected to increase the damping effect for turbulent conditions.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

## Safety information, installation and maintenance

**Warning:** This document does not contain sufficient information to install the unit safely. The unit operates at a potentially fatal mains voltage. Before attempting to install the unit read the Installation and Maintenance Instructions supplied with it.

Caution: before installing and connecting the power ensure there is no condensation within the unit. The product may be installed on a DIN rail, on a chassis plate, or in a panel cutout. A bezel is supplied.

The product must be installed in a suitable industrial control panel or fireproof enclosure to provide impact and environmental protection. A minimum of IP54 (EN 60529) is required. Spirax Sarco can provide suitable plastic or metal enclosures

**Do not** install the product outdoors without additional weather protection.

**Do not** attempt to open the product - it is sealed and has no replaceable parts or internal switches.

**Do not** cover or obstruct the infrared beam between products.

All wiring materials and methods shall comply with relevant standards where applicable.

No special servicing, preventative maintenance or inspection of the product is required.

Boiler water level controls and level alarms do, however, require testing and inspection.

## Dimensions / weight (approximate) in mm and g.

Weight 550 g. (1.21 lb)

### How to specify

Multi-voltage level controller having two alarms, configurable high or low, infrared communication as a master or slave unit.

### How to order

**Example:** 1 off Spirax Sarco LC2650 level controller.

## APS 1 Probe Simulator

- A valuable diagnostic aid for Spirax Sarco boiler control installations
- Compatible with all TDS/level probes and controllers
- No need to fire boiler or alter water levels
- No battery or power supply needed
- Easy to operate

### Description

The APS 1 probe simulator is used in place of a level or conductivity probe to verify the correct operation of Spirax Sarco controllers. It can also be used to diagnose wiring/probe faults. It is connected to the level probe or conductivity probe wiring, avoiding the need to fire the boiler or alter water levels, and is quick and easy to use.

The APS 1 has switch settings covering all Spirax Sarco probe types and ranges.

A potentiometer provides the variable input to a capacitance controller, and 4mm test sockets are provided for connection of a multimeter, which is used to check the voltage when simulating capacitance probes.

Switches simulate wet or dry (high or low resistance) conductivity level probe conditions, and resistors are built in to represent various conductivity probe ranges.

The APS 1 is powered by the controller under test, so needs no batteries or external power supply.

The unit is fitted with two inputs, connected in parallel. One is for connection of a PT 1, 2, or 3 plug tail, and the other is a DIN 43650 connector as used on conductivity and capacitance probes.

Full operating instructions are supplied with each unit.

### Limiting conditions

Maximum ambient temperature	130°F (55°C)
Protection rating	IP 40

### Technical data

Conductivity probe settings	22Ω, 68Ω, 220Ω, 680Ω, 2.2kΩ, 6.8kΩ, 22kΩ
Level probe settings	
LP 31	6.8kΩ/15kΩ
LP 30	6.8kΩ/15kΩ
LP 10/EL 9 (High sensitivity)	68kΩ/150kΩ
LP 10/EL 9 (Low sensitivity)	6.8kΩ/15kΩ
Capacitance probe range	0-10 Volts output

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

## DS1000 Digital Display

### Description

The Spirax Sarco DS1000 is connected in series with a 4 - 20 mA current loop to provide an LCD display, in engineering units, of the process variable represented by the current flow.

It has many uses for level, conductivity, temperature, or pressure indication. A specific application example is to provide a remote display of TDS for Spirax Sarco TDS slowdown controllers. It is supplied calibrated in percentage units to display 00.0 at 4 mA, and 100.0 at 20 mA. Jumper links and potentiometers on the back of the instrument allow it to be scaled in any engineering units if required. An aperture below the display shows the unit of measurement, and the special legend sheet supplied with the instrument enables alternative units of measurement to be selected if required.

The DS1000 is housed in a 3.78" x 1.89" (96 x 48 mm) DIN standard panel mounted case and has a .5" (12.7 mm) high 3½ digit LCD, with a selectable decimal point.

Because the instrument is loop powered it needs no external power supply. It requires less than 3 volts from the loop for operation.

### Principal features:

- Loop powered 4-20 mA input.
- Pre-calibrated for percentage indication.
- Can be scaled for any engineering units.
- IP65 front panel seal.

### Pressure / temperature limits

Maximum ambient temperature	122° F (50°C)
Minimum ambient temperature	32°F (0°C)

### Safety information, installation and maintenance

For full details see the installation and maintenance instructions supplied with the product.

### Installation note:

The DS1000 is fitted in a 3.62" x 1.73" (92 x 44 mm) aperture in the boiler panel. It should not be installed adjacent to switch gear, electro-magnetic starters, contactors, thyristor power units, or motors.

### Dimensions approximate in inches (millimeters)

Panel cutout 3.62" x 1.73" (92x44)

Weight 0.4 lb (200 g)

### Materials

Front bezel / back panel	Nylon 6-glass filled
Case	Aluminium

### Technical data

	68°F (20°C)	
Input	4-20mA 2 wire	
Display	0.5" (12.7mm) high LCD 3-1/2 digit	
Volt drop	<3 Volt	
Rangeability	Zero	± 1000 counts
	Span	200/2000 counts
	Decimal point	Any position
	Accuracy	± 1 count
Protection rating	Sample rate	3 readings/second
	Fuse rating	63mA (PCB mounted)
	IP65 (Front panel only)	

### How to specify

4-20mA loop powered digital display with legend sheet.

### How to order

1 off Spirax Sarco DS1000 digital display.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

## LP30 High Integrity, Self-monitoring Low Level Alarm Probe

### Description

The Spirax Sarco LP30 level probe is used with a Spirax Sarco LC3050 level controller to provide a high integrity, self-monitoring low level alarm signal, usually in a steam boiler. It consists of a probe body with a removable cable socket, and a separate screw-on probe tip which is retained by a lock-nut and pin.

The probe has a level sensing tip (probe tip), and a comparator tip. The earth return path is via the body connection.

Under normal operating conditions the probe tip is partially immersed, and the resistance to earth is low. When the water level drops below the probe tip the resistance to earth becomes high, causing the controller to give a low level alarm signal.

The comparator tip compensates for any leakage to earth caused by scale, dirt, or internal moisture, ensuring a low water alarm signal even under adverse conditions.

### Principal features:

- High integrity, self-monitoring low level alarm probe.
- Suitable for pressures up to 0° psig @ 462°F (32 bar g at 239°C).
- No maintenance required.
- Positively retained probe tip.

### Approvals:

The LP30 is available with a ½" NPT screwed connection.

**Caution: The probe is not suitable for outside installation without additional environmental protection.**

### Available tip lengths inches (mm)

19.7" (500 mm), 39.4" (1000 mm), 59" (1500 mm).

### Pressure / temperature limits

Nominal pressure rating	PN40
Maximum boiler pressure	464 psig (32 barg)
Maximum temperature	462°F (239°C)
Maximum ambient temperature	158°F (70°C)

Designed for a maximum cold hydraulic pressure test of: 870 psig (60 barg)

### Technical data

Maximum probe cable length	164 ft (50m)
Cable socket protection rating	IP65

### Materials

No.	Description	Material	
1	Probe body	Austenitic stainless steel	BS EN 10088-3 (1.4306)
2	Cover assembly	Austenitic stainless steel	Type 316L
3	Name-plate	Polycarbonate	
4	Cable socket and probe connector	Polyamide, glass filled	
5	Connector gasket	Silicone elastomer	
6	Comparator tip	Austenitic stainless steel	Type 316L
7	Primary insulator and secondary insulator	PTFE	BS 6564 Grade UA Type 1
8	Retaining pin	Austenitic stainless steel	Type 302 / 304
9	Probe tip	Austenitic stainless steel	Type 316L
10	Lock-nut	Austenitic stainless steel	BS 6105 A4 80

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-P402-43-US 1.14

# LP30 High Integrity, Self-monitoring Low Level Alarm Probe

**Dimensions** (approximate) in inches and (millimeters)

**Weight (approximate) in lb (kg) including immediate packaging**

Tip length	Probe	19.7" (500 mm)	39.4" (1000 mm)	59" (1500 mm)
Weight	1.11 lb (.52 kg)	.61 lb (.28 kg)	1.21 lb (.55 kg)	3.6 lb (.8 kg)

## Safety information, installation and maintenance

This document does not contain sufficient information to install the product safely. See the Installation and Maintenance Instructions provided with each unit.

### Installation note:

The probe is designed to work with a Spirax Sarco LC3050 controller. Two probes and controllers are normally fitted in steam boilers, giving first and second low alarms.

A protection tube is required for boiler shell or turbulent tank fitting. Install the probe in a 1/2" NPT (1/2" BSP) female connection.

**Note: Do not install the probe outdoors without additional weather protection.**

**Warning: It is essential that the probe tip of the LP30 low level alarm probe does not touch any part of the boiler. Standards require that the tip is at least 14 mm from the protection tube, and this must be checked when the probe is installed.**

The product is supplied with a spring clearance checking set. Refer to separate literature for details. Spare sets are available - see Spare Parts.

### Maintenance note:

No special maintenance is required.

Boiler water level controls do, however, require periodic testing and inspection, which is described in separate literature.

## How to specify

High integrity self-monitoring low level alarm probes shall be Spirax Sarco type LP30 with austenitic stainless steel bodies and probe tips, PTFE probe sleeving, and cable socket with Pg 11 cable gland. They must have a comparator tip to compensate for scaling, and a positively located probe tip. They must be used with an appropriate Spirax Sarco controller.

## How to order

**Example:** 1 off Spirax Sarco LP30 high integrity, self-monitoring, low level alarm probe with 39.4" (1000 mm) tip.

## Spare parts

The spare parts available are detailed below. No other parts are supplied as spares.

### Available spares

<b>LP30 tip retaining pins</b>	Stock No. 4024780	Pack of 10
<b>Spring clearance checking set</b>	Stock No. 4024781	1 set (2 springs)

### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state which product they are for.

**Example:** 1 off Spring clearance checking set for a Spirax Sarco LP30 high integrity, self-monitoring low level alarm probe.

TI-P402-43-US 1.14

285

## LP 31 High Integrity, Self-Monitoring High Water Level Alarm Probe

### Description

The Spirax Sarco LP31 is used in conjunction with an LC3050 controller to provide a high integrity, self-monitoring alarm for detection of high water levels in steam boilers and other vessels.

The probe is normally installed direct in the boiler shell in a protection tube, but can be mounted in an external chamber if regulations permit.

The LP31 is supplied in three nominal tip lengths, and is cut to the exact length required prior to installation.

In normal operation, the tip is above the water level, and has a high resistance path to earth. If the water level rises to touch the probe tip, the resistance to earth drops, causing the alarm relays in the controller to be de-energised and the alarm to sound.

The LP31 is designed so that its tip and wiring connection integrity is monitored by the controller, causing an alarm signal in the event of a fault occurring.

The LP31 can also be used as a simple (non self-monitoring) high or low level probe with an LC1350 level controller.

A DIN 43650 cable socket with Pg 11 cable gland is supplied with the unit.

### Approvals:

The LP31 is available with a 1/2" NPT screwed connection.

**Caution: The probe is not suitable for outside installation without additional environmental protection.**

### Available tip lengths inches (mm)

19.7" (500), 39.4" (1000) and 59" (1500).

### Limiting conditions

Nominal pressure rating	PN40
Maximum boiler pressure	464 psi g (32 bar g)
Maximum temperature	462°F (239°C)
Maximum ambient temperature	158°F (70°C)

### Technical data

Maximum probe cable length	164 ft (50 metres)
Cable socket protection rating	IP65
Minimum conductivity	LC1350 1 mS/cm or 1 ppm
	LC3050 30 mS/cm or 30 ppm

### Materials

No.	Description	Material
1	Cable socket	Polyamide, glass filled
2	Flat gasket	Silicone rubber
3	Probe connector	Polyamide, glass filled
4	Cover assembly	Austenitic stainless steel
5	Name-plate	Polycarbonate
6	Body	Austenitic stainless steel BS EN 10088-3 (1.4306)
7	Probe tip sleeving	PTFE
8	Probe tip	Austenitic stainless steel ASTM A276 316L

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-P402-81-US 1.14

# LP 31 High Integrity, Self-Monitoring High Water Level Alarm Probe

**Dimensions** (approximate) in inches and millimeters

**Weights** (approximate) in lb (kg)

<b>Tip length</b>	19.7" (500 mm)	39.4" (1000 mm)	59.1" (1500 mm)
<b>Weight</b>	1.1 (0.51)	1.3 (0.59)	1.5 (0.67)

**Safety information, installation and maintenance**

This document does not contain sufficient information to install the product safely. See the Installation and Maintenance Instructions provided with each unit.

**Installation note:**

The LP31 tip is cut to length and de-burred prior to installation. The LP31 has been designed to work with a Spirax Sarco LC3050 controller.

A protection tube is required for boiler shell or turbulent tank fitting. Install the probe in a 1/2" NPT parallel (1/2" BSP) female connection using PTFE tape.

**Note: Do not install the probe outdoors without additional weather protection.**

**Maintenance note:**

No special maintenance is required. Boiler water level controls do, however, require periodic testing and inspection, which is described in separate literature.

**Spare parts**

There are no available spare parts for this unit.

**How to specify**

High integrity high level alarm probes shall be Spirax Sarco self-monitoring type LP31 with an austenitic stainless steel body and probe tip, PTFE probe sleeving, and DIN 43650 cable socket with Pg 11 cable gland. They shall be cut to length on installation and be used with an appropriate Spirax Sarco controller.

**How to order**

**Example:** 1 off Spirax Sarco LP31 high integrity, self-monitoring, high water level alarm probe with 39.4" (1000 mm) tip.

# LC3050 Level Controller

## Description

The Spirax Sarco LC3050 is a level limiting alarm for use in conductive liquids as a high or a low alarm, and is defined as a 'special design water level limiter' in the context of EN 12952-11. It is suitable for use with steam or hot water boilers operating up to 32 bar at 239°C (464psig@462°F).

The LC3050 is a dual voltage unit, 230 Vac or 115 Vac for use with Spirax Sarco high or low level, self-monitoring high integrity probes.

The LC3050 has two LED's, indicating normal and alarm conditions, and a test button (AL). The other buttons on the keypad are non-functional.

The unit can be panel, DIN rail or chassis mounted.

An automatic cyclic test of the probe, probe cable and controller is carried out every few seconds by internally simulating a fault in the probe.

A test button is fitted so that a full test of the probe, controller, and associated circuits can be carried out. Provision is made for the wiring of a remote test button if required.

**WARNING; In most countries, steam boilers operating with limited supervision require two self-monitoring level probes and controllers to provide two independent low level alarms. A high level alarm is also advised, and is compulsory in some countries.**

### Principal features:

- High integrity, self-monitoring low or high level alarm.
- TÜV approved.
- Dual mains supply, 230 / 115 Vac.
- LED indication of status.
- Infrared communications.

### Approvals

This product complies with the Electromagnetic Compatibility Directive 2004 / 108 / EC and all its requirements.

This product meets all the Requirements of the Directive and is suitable for Class A Environments (eg Industrial). The LC3050 meets the requirements of the Directive by meeting the Controlling standard:

- EN 61326-1: 2006 - Electrical equipment for measurement control and laboratory use - EMC requirements Part 1: General requirements.

In addition the LC3050 meets the EMC requirements of the following standards:

- EN 12953-9: 2007 - Shell boilers Part 9: Requirements for limiting devices of the boiler and accessories.
- EN 12952-11: 2007 - Water-tube boilers and auxiliary installations Part 11: Requirements for limiting devices of the boiler and accessories.

The LC3050 has been type-tested as a Special Design Water Level Limiter by meeting the Standard:

- Vd TÜV requirements for water level control and limiting devices, Water Level 100 (07.2010).

The product complies with Low Voltage Directive (2006 / 95 / EC) by meeting the standards of:

- EN 61010-1:2001 Safety requirements for electrical equipment for measurement, control and laboratory use.

## Function / Inputs / Outputs

### Function

The LC3050 is normally configured to warn of a change in level outside normal limits for steam or hot water boilers, tanks or vessels, by engaging an alarm relay. Spirax Sarco high-integrity, self-monitoring probes can indicate internal faults or water ingress.

The LC3050 compares the resistance to earth from the probe, through the water, to the boiler or vessel shell. If a change in water level causes this resistance to change beyond a set limit, a timer is engaged which alters the state of internal relays after a pre-set delay. This signal is normally used to trigger an alarm, and cut the supply to the burner.

### Input / output

The product accepts inputs from the LP30 low level probe or the LP31 high level probe.

With the water level normal the green LED will be lit, and the boiler panel will indicate a normal water level. The green LED briefly extinguishes every few seconds showing that the automatic cyclic test is being carried out.

A compensation tip on the probe signals an alarm if the probe should become faulty through water ingress or an internal wiring fault.

Outputs can be remotely accessed via the RS485 / MODBUS communications.

### Other features

The LC3050 can communicate via an infrared link between adjacent controllers. It enables the alarm status of the LC3050 to be passed to a product fitted with RS485 (user). User products are those fitted with a graphics display. The LC3050 is defined as a slave unit. No set-up or adjustment is needed.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

## BCS1 Blowdown System Pipeline Set

- For TDS systems with probe in pipeline
- Complete pipeline kit - choice of controller
- Suitable for boiler pressures of 203 psig (14 bar g)
- For blowdown rates up to 1,300 lb/h (590 kg/h)

### Description

The BCS1 pipeline set is a kit of components selected to enable straightforward installation of a TDS control system where the probe assembly is to be mounted in the pipeline, rather than directly in the boiler shell.

The BCS1 pipeline set consists of the following items:

- 1 x S10 sensor chamber 1/2" NPT.
- 1 x CP10 sensor and gasket.
- 1 x PT2 plug tail. (3/8" BSP)
- 1 x Sensor chamber plug 1/4" BSP.
- 1 x BCV1 solenoid valve 120 V.
- 1 x LCV1 check valve 1/2" NPT.
- 1 x y type cast iron strainer (1/2" NPT, 20 Mesh).
- 2 x M10 ball valves 1/2" NPT.

Alternative products are available, but not as part of a kit.

A controller is also required, and should be selected from the Spirax Sarco range.

The BC3150 and BC3250 are all suitable, and offer a choice of features. Full details are available in separate literature. Main features are listed opposite.

### Materials

S10 sensor chamber	Stainless steel	BS 970 303 S31
CP10 sensor body and pin	Stainless steel	BS 970 303 S31
PT2 plug tail	Brass body	
Sensor chamber plug	Carbon steel	
BCV1 solenoid valve	Brass body, stainless steel seat, PTFE seal.	
LCV1 check valve	Bronze	
Strainer	Cast iron	
M10 ball valve	Zinc plated forged carbon steel	

See individual product literature for further information.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

### BC3200

- Wall mounting.
- Two button commissioning, calibration, and operation.
- Selectable ranges (ppm or  $\mu\text{S}/\text{cm}$ ).
- Four digit LED display of TDS and system status.
- High TDS alarm relay output.
- 0 -20 or 4 - 20 mA output.
- Patented automatic probe cleaning circuit.
- Temperature compensation facility.
- Selectable security feature.
- Optional front cover lock available.

### BC3210

- As BC3200, but boiler panel mounting.
- Optional lockable cover available.

# BCS1 Blowdown System Pipeline Set

## Limiting conditions

Maximum boiler pressure 203 psig (14 bar g).

## Capacities

The capacity of the system is limited by the blowdown valve capacity at various boiler pressures.

Boiler pressure psig (bar g)	Low to medium flowrates (Standard setting*)	Medium to high flowrates (High setting*)
14.5 (1)	60	175
29.0 (2)	85	250
58.0 (4)	115	350
87.0 (6)	130	385
116.0 (8)	150	445
145.0 (10)	165	495
203.0 (14)	200	590

\*At 'Standard setting' the controller is set to open the valve for 10 seconds every 30 seconds.

When blowing down at 'High setting' the controller opens the valve continuously.

## Weight

Boxed kit approximately 8.2 lbs (3.7 kg).

## Electrical data

### BCV1 solenoid (blowdown) valve

Voltage range	209 V to 264 V
Frequency range	50 to 60 Hz
Power consumption	40 VA (inrush) 16 VA/10 W (hold)
Protection rating	IP65

## Safety information

**WARNING:** Your attention is drawn to Safety Information Leaflet IM-GCM-10, as well as to any National or Regional regulations. The products contained in the BCS1 pipeline set are designed and constructed to withstand the forces encountered during normal use. Use of the BCS1 pipeline set other than for the control of TDS could cause damage to the products and may cause injury or fatality to personnel.

The BCV1 valve and CP10 sensor contain PTFE which can give off toxic fumes if exposed to excessive heat.

## Installation

This document does not contain sufficient information to install the product safely. See the Installation and Maintenance Instructions provided with each kit.

## Available spares

Armature and spring set for BCV1 blowdown valve (kit).  
Stock No. 4034080

## How to order

Example: 1 off Spirax Sarco BCS1 pipeline set.

## S20 Sensor Chamber, TP20 Temperature Sensor, CP10 Sensor and PT2 Plug-tail Cast Iron Valves

- Purpose designed sensor chamber for in-line mounting
- Simple removal of sensors for cleaning
- Allows continuous temperature compensated measurement

### Description

The Spirax Sarco S20 sensor chamber is fitted with conductivity and temperature sensors used to determine the conductivity of liquids. The use of a temperature sensor enables an accurate measurement to be made when the temperature varies, as in the case of condensate return monitoring systems.

The hexagonal in-line sensor chamber is screwed 1" NPT. Adjacent radial female screwed connections are provided for:-  
 CP10 conductivity sensor (3/8" BSP).  
 TP20 temperature sensor (1/4" BSP).

An additional 1/4" BSP (1/4" NPT) connection is provided on the other side of the chamber for taking a sample if required. Spirax Sarco can supply a sample cooler for cooling hot samples, or a blanking plug if the connection is not required.

### Limiting Conditions

#### S20 sensor chamber and TP20 Temperature sensor

Maximum pressure	160 psig (11 barg)
Maximum media temperature	302°F (150°C)

#### CP10 conductivity sensor

Maximum pressure	464 psig (32 barg)
Maximum media temperature	462°F (239°C)
Torque rating	44 lb./f (60 Nm)

#### PT2 Plug-tail

Cable temperature range	-67 to 248°F (-55 to 120°C)
Supplied cable length	50" (1.25m)
Maximum voltage	20Vdc, 14Vac
Maximum current	10mA

### Installation

**Caution: Do not install the sensor outdoors without additional weather protection.**

Fit the sensor chamber in a vertical or horizontal pipeline with suitable isolation valves to allow inspection/cleaning of the sensors. Reducers may be fitted if required. Flow can be in either direction.

The sensors themselves must be horizontal.

The TP20 has a taper thread, and may be installed using PTFE sealing tape if required.

The CP10 sensor is provided with an S-type stainless steel gasket for sealing and does not require sealing tape.

Fit the sensors to the chamber and tighten.

Fit PT2 plug tail (or other Spirax Sarco plug tail) to the CP10 sensor and tighten.

The supply to the Sensor and Plug-tail must be provided by a low voltage limited power source. Spirax Sarco Blowdown controllers provide this type of supply. Flexible metal conduit (M16) can be connected to the PT12 by removing the nut (1)

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

TI-9-403-US 08.11

# S20 Sensor Chamber, TP20 Temperature Sensor, CP10 Sensor and PT2 Plug-tail

## Maintenance

The equipment requires no specific maintenance other than periodic inspection and cleaning.

## How to Specify

In line sensor chamber with conductivity and temperature sensors. CP10 Conductivity Sensor and PT2 Plug-tail.

## Materials

### S20 sensor chamber

Stainless steel    ASTM 8582303    BS 970 303 S31

### PT2 Plug-tail

Body                    Brass  
Nuts                    Brass (2off)  
Insulator              Polyphenylene Sulphide Resin (glass filled)

### CP10 conductivity sensor

Body                    Stainless steel    BS 970 303 S31  
Insulator              PEEK plastic  
Pin                      Stainless steel    BS 970 303 S31

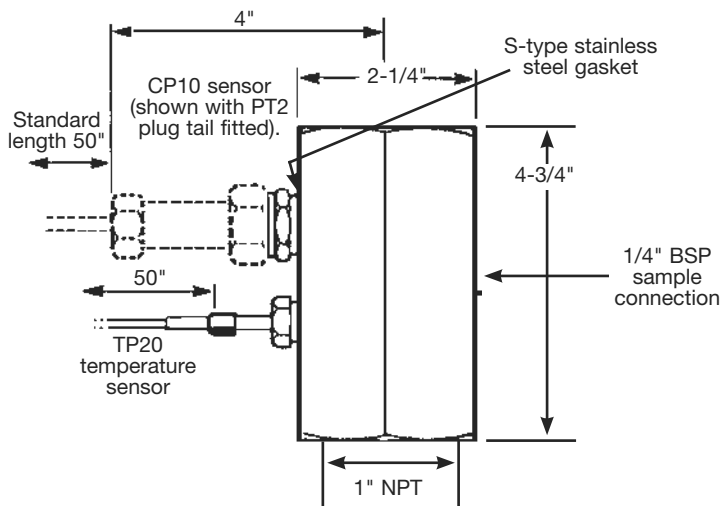

### TP20 temperature sensor

Body and probe      Stainless steel 316 ASTM A269 Gr. 316  
Cable insulation      PFA

## How to Order

Spirax Sarco's S20 sensor chamber complete with CP10 sensor, PT2 plug tail, 1/4" BSP blanking plug, and TP 20 temperature sensor.

## Dimensions (approximately) in inches

## CP 30 Conductivity Probe

- Conductivity probe for use with blowdown controllers
- Suitable for use in steam boilers up to 464 psig.  
462°F - (32 barg, 239°C)
- Easily cut to length
- All wetted parts in austenitic stainless steel/PTFE

### Description

The Spirax Sarco CP30 conductivity probe is used in conjunction with a controller to measure the conductivity or TDS of water, usually in a steam boiler for the purpose of monitoring and controlling blowdown. The probe may be installed in a Spirax Sarco probe elbow, a screwed flange, or directly in a boiler connection. The CP30 is supplied in four nominal tip lengths, and is cut to the exact length required prior to installation.

A DIN 43650 cable socket with 1/2" NPT conduit thread and four 18AWG wires are supplied with the unit.

### Limiting conditions

Maximum boiler pressure	464 psig	(32 barg)
Maximum temperature	462°F	(239°C)
Hydraulic ambient temperature	158°F	(70°C)
Minimum distance from boiler tubes	.8"	(20mm)
Minimum emersion depth (vertical installed probes)	4.0"	(100mm)
Cable socket protection rating	IP65	

\*Additional environmental protection is needed for outdoor installations.

### Installation

Probes with tip lengths up to 19.7" (500mm) can be installed vertically or horizontally. Vertical installation only is recommended for longer lengths. The probe must be installed in a position where it can sense the conductivity of the boiler water, away from the feed water inlet if possible. Full instructions on cutting the probe tip to length, wiring, and maintenance are given in the Installation and Maintenance Instructions supplied with each unit.

### Available Tip Lengths Inches and millimeters

11.8", 19.7", 39.4", 59.1" 300mm, 500mm, 1000mm, 1500mm

### Weights (approximate) in lb (kg)

11.8" (300mm) tip version	1lb (0.47kg)
19.7" (500mm)	1lb (0.49kg)
39.4" (1000mm)	1.3lb (0.59kg)
59.1" (1500mm) tip version	1.5lb (0.68kg)

### Available Spares

Tip shroud and spring assembly, stock No. 4031280.

### How to Specify

Conductivity probe with all wetted parts in austenitic stainless steel and PTFE, 1/2" NPT, tip length 19.7" (500mm).

### How to Order

Spirax Sarco UL CP30 (1/2" NPT) probe with 19.7" (500mm) tip.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-9-202-US 08.11

**Dimensions** (approximate) in inches and millimeters

# CP 30 Conductivity Probe

## Installation Examples

Installation on a probe elbow, ideally on the horizontal center line of the boiler.

Installation on a boiler (screwed or flanged)

Vertical installation on a boiler standpipe

## Materials

No	Description	Material
1	Cable socket	Polyamide, glass filled
2	Flat gasket	Silicone rubber
3	Probe connector	Polyamide, glass filled
4	Cover assembly	Austenitic stainless steel
5	Nameplate	Aluminum foil
6	Body	Austenitic stainless steel Type 316Ti W/S No. 1.4571
7	Probe tip	Austenitic stainless steel ASTM A276 316L
8	Probe tip sleeving	PTFE
9	Tip shroud	PTFE
10	Spring	Austenitic stainless steel BS 2056 316 S42
11	Flying leads	Copper conductor, PVC insulation 18AWG CSA TEW 105oC, UL1015 105oC, 600V

Boiler Controls

Boiler Blowdown & CCD

## CP 32 Twin Tip Conductivity Probe

### Description

The Spirax Sarco CP32 conductivity probe is used in conjunction with a controller to measure the conductivity (or TDS) of water, usually in a steam boiler, for the purpose of monitoring and controlling blowdown.

The CP32 has a built-in temperature sensor, and when used with an appropriate controller, is able to detect scaling (UK Patent No. 2297843). It also automatically initiates a probe conditioning cycle (UK Patent No. 2276943). This causes any scale on the probe to become porous or fall off, allowing the probe to continue to sense at its original calibration level.

**WARNING: This feature is not a substitute for adequate boiler water treatment. If scale is occurring on a probe, it is also occurring inside the boiler, and a competent water treatment specialist must be consulted to avoid a potentially dangerous situation.**

The CP32 is supplied in three nominal tip lengths, and has a 1/2" NPT male thread for connection to a Spirax Sarco probe elbow, a screwed flange, or directly into a boiler connection.

### Principal features :

- Twin tip conductivity probe for use in TDS control systems.
- Built-in temperature sensor - only one boiler connection needed.
- Suitable for use in steam boilers up to 462°F @ 464 psi g
- Patented scale detection and compensation.

### Available tip lengths inches

11.8", 19.7" and 39.4"

**Note:** 39.4" probes can only be installed vertically.

### Pressure / temperature limits

Maximum boiler pressure	464 psi g
Maximum operating temperature	462°F
Maximum ambient temperature	131°F

### Technical data

Protection rating (terminal head / cable gland only)	IP65
Minimum tip distance from boiler tubes	0.4"
Minimum immersion depth (vertically installed probes)	4.0"
Maximum cable length (probe to controller)	328 ft
Minimum conductivity	10 ppm

### Materials

No.	Part	Material
1	Terminal head	Aluminium
2	'O' ring	Nitrile rubber
3	Cover tube	Austenitic stainless steel Type 316L
4	Name-plate	Polycarbonate
5	Body	Austenitic stainless steel Type 304L 1.4306
6	Spring	Austenitic stainless steel 302 S26
7	Insulator	PEEK
8	Driver tip	Austenitic stainless steel Type 316
9	Sensor tip	Austenitic stainless steel UGINE 4632
10	Rod	Austenitic stainless steel Type 316 / 316L

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-P403-59-US 08.08

# CP 32 Twin Tip Conductivity Probe

Dimensions (approximate) in inches

## Safety information

For full details see the Installation and Maintenance Instructions supplied with the product, which gives full wiring, commissioning and operating instructions.

### Warning:

**This product contains materials including PTFE which can give off toxic fumes if exposed to excessive heat.**

### Installation Note:

**Do not** install the probe outdoors without additional weather protection. 11.8" and 19.7" probes can be installed vertically or horizontally. **CAUTION: 39.4" probes must be installed vertically only.** The probe must be installed in a position where it can sense the conductivity of the boiler water, away from the feedwater inlet if possible. The CP32 contains no user serviceable components, and periodic cleaning is all that is required. Any attempt to dismantle the probe will result in permanent damage.

## Spare parts

The spare parts available are detailed below. No other parts are supplied as spares.

### Available spares

Enclosure 'O' ring	2
--------------------	---

### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state which product they are for.

**Example:** 1 off Enclosure 'O' ring for a Spirax Sarco CP32 twin tip conductivity probe.

## How to specify

TDS conductivity probes shall be Spirax Sarco type CP32 with nickel alloy sensor tips and built-in temperature sensor. They must incorporate a patented facility to check the sensor tips for scaling. When used in conjunction with an appropriate Spirax Sarco controller, they must also be able to automatically initiate a patented probe cleaning feature, which, if unable to clean the probe, will activate a warning on the controller's display panel and / or a remote alarm. The system must also be able to automatically compensate for any polarisation effects at the sensors. They must be suitable for boiler pressures up to 464 psig and a maximum working temperature of 462°F. They must be available in 11.8", 19.7" and 39.4" lengths, and have a 1/2" NPT boiler connection.

## How to order

**Example:** 1 of Spirax Sarco CP32, twin tip conductivity probe having a 1/2" NPT connection and 11.8" tip length.

## Weights (approximate) in lb

Tip length	11.8"	19.7"	39.4"
Weight	2.2	2.6	3.5

## BC3150 Blowdown Controller

### Description

The BC3150 is a blowdown controller for steam boilers. It controls TDS (total dissolved solids – salts in solution) by opening and closing a blowdown valve. It works in conjunction with a Spirax Sarco conductivity sensor, a boiler blowdown valve or condensate dump valve.

The product can be panel, DIN rail or chassis mounted and powered by a 110 to 240 Vac mains supply.

The front panel has a 3 digit LCD and a five-button keypad.

The product has no battery. The programmed settings are held in non-volatile memory (Flash) and are written to after changing a parameter and pressing the OK key.

### Principal features:

- Blowdown controller with temperature compensation.
- Type approved as a TDS limiter and controller.
- Works with CP10, CP30 or CP32 conductivity probes.
- Wide range: 1-9990  $\mu\text{S}/\text{cm}$  or ppm – (x1, x 10, x 100 x 1000).
- LCD display with direct probe condition indicator.
- Infrared communications.

### Approvals

This product complies with the Electromagnetic Compatibility Directive 2004 / 108 / EC and all its requirements.

The BC3150 is suitable for Class A Environments (e.g. industrial). A fully detailed EMC assessment has been made and has the reference number UK Supply BH BC3150 2008.

The BC3150 complies with the Low Voltage Directive by meeting the standards of:

- EN 61010-1:2010 safety requirements for electrical equipment for measurement, control, and laboratory use.

The BC3150 has been type-tested as a TDS controller and limiter by meeting the standard:

- Vd TÜV Equipment for Water Control 100 (07.2010).

### Function

All ranges and operating parameters are selected using the software menu.

Commissioning is carried out using the two lower buttons.

Once fully commissioned, the TDS value is displayed in  $\mu\text{S}/\text{cm}$  (or ppm if selected).

If the water conductivity exceeds the Set Point level, the TDS value shown on the display will alternate with 'bld', and the valve relay will be energised until the conductivity drops below 5% of full scale (FS) below the set point.

If the water conductivity exceeds the alarm level, the TDS value will alternate with 'AL', and the valve relay will be energised until the conductivity drops 3% (FS) below the alarm level.

If the system is carrying out a purge, The TDS value will alternate with 'Pur', and the valve relay will be energised until the conductivity drops 5% (FS) below the set point.

### Inputs

The BC3150 can accept a signal from a Spirax Sarco conductivity probe (CP10, CP30, or CP32).

A Pt100 temperature sensor may be connected to provide temperature compensation (2% / °F). This is recommended if the boiler is working at varying pressures, or for other applications, such as condensate monitoring or coil boilers, where the temperature may vary. If a Pt100 is not fitted, the product uses a default temperature of 363°F (145 psig).

### Outputs

Pulsed output - For smaller boilers where the capacity of the blowdown valve is relatively high compared to the boiler size, the blowdown may be set to pulsed, rather than continuous output, opening for 10 seconds, and closing for 20 seconds. This slows the rate at which the boiler water is removed so that the level is not unduly affected, avoiding the risk of triggering a low water alarm.

### Other features

To prevent unwanted or inadvertent changes being made, all commissioning parameters are protected with a pass code. The BC3150 can communicate via an infrared link between adjacent controllers.

This feature enables the parameters of this product (OEM) to be passed to a product fitted with RS485 (user).

The BC3150 is always an IR slave – No set-up or adjustment is needed.

An isolated 4 - 20 mA output is provided as standard, and may be used for remote display of the TDS level or as an output to a computerised management system.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

# BC3150 Blowdown Controller

## Safety information, installation and maintenance

**Warning:** This document does not contain sufficient information to install the unit safely. The unit operates at a potentially fatal mains voltage. Before attempting to install the unit read the Installation and Maintenance Instructions supplied with it.

Caution: before installing and connecting the power ensure there is no condensation within the unit. The product may be installed on a DIN rail, on a chassis plate, or in a panel cutout. A bezel is supplied.

The product must be installed in a suitable industrial control panel or fireproof enclosure to provide impact and environmental protection. A minimum of IP54 (EN 60529) is required. Spirax Sarco can provide suitable plastic or metal enclosures

**Do not** install the product outdoors without additional weather protection.

**Do not** attempt to open the product - it is sealed and has no replaceable parts or internal switches.

**Do not** cover or obstruct the infrared beam between products.

No special servicing, preventative maintenance or inspection of the product is required.

Boiler water level controls and level alarms do, however, require testing and inspection.

## Dimensions / weight (approximate)

Weight 1 lb

## How to specify

Blowdown controller with LCD display and five-button keypad, and infrared communications.

## How to order

**Example:** 1 off Spirax Sarco BC3150 blowdown controller.

## BC3250 Blowdown Controller

### Description

The BC3250 is a blowdown controller for steam boilers. It controls TDS (total dissolved solids - salts in solution) by opening and closing a blowdown valve.

It also has a timer that controls a bottom blowdown valve, to remove precipitated solids from the bottom of the boiler.

The product works in conjunction with a Spirax Sarco conductivity sensor, a boiler blowdown valve and, for condensate contamination detection, a dump valve.

It can operate on a supply voltage of between 110 to 240 Vac @ 50/60 Hz.

The front panel has an LCD graphics display and five-button keypad to select, view, and change functions.

In run mode (standard setting) the display is divided into three sections:

- i) Process variable and control parameters.
- ii) Information line, displays the various control states and process units.
- iii) Three bar graphs, which show a percentage of full scale of:
  - PV Process Variable highest and lowest recorded value.
  - SP Set Point and hysteresis point.
  - AL High Alarm and hysteresis point.

An additional filter can be selected to increase the damping effect where the probe is fitted directly in the boiler. This avoids over-frequent valve operation.

A Trend graph screen display appears if the right or left button is pressed in run mode - This displays a record of the variation in TDS over a set time.

The BC3250 can be used on a condensate contamination system. Please note that it will not detect contaminants that do not change the conductivity, e.g. oils, fats, or sugars.

The blowdown may be set to pulsed, rather than continuous output, opening for 10 seconds, and closing for 20 seconds. This avoids the risk of triggering a low water alarm in smaller boilers.

An isolated 0 - 20 or 4 - 20 mA output is provided for remote display of the TDS level or as an output to a management system.

If a switch box is fitted to the bottom blowdown valve actuator, an alarm can be configured to indicate if the bottom blowdown valve fails to close or to lift off its seat.

The BC3250 can communicate via an infrared link between adjacent controllers. It can be designated as either a master unit or a slave unit.

The unit can be panel, DIN rail or chassis mounted.

### Principal features:

- Blowdown controller with bottom blowdown timer.
- Multi-voltage 110 Vac to 240 Vac.
- Display in  $\mu\text{S}/\text{cm}$  or ppm.
- LCD graphics display of PV and sequential trend graph.
- Filter for turbulent conditions.
- Infrared communications.
- Diagnostic / test facility.
- 0/4 - 20 mA output.
- EIA 485/Modbus communications.
- TÜV approved.

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

### Approvals

This product complies with the Electromagnetic Compatibility Directive 2004 / 108 / EC and all its requirements.

The BC3250 is suitable for Class A Environments (e.g. industrial). A fully detailed EMC assessment has been made and has the reference number UK Supply BH BC3250 2008.

The BC3250 complies with the Low Voltage Directive by meeting the standards of:

- EN 61010-1:2010 safety requirements for electrical equipment for measurement, control, and laboratory use.

The BC3250 has been type-tested as a TDS controller and limiter by meeting the standard:

- Vd TÜV requirements for TDS control and limiting devices, Water Level 100 (07.2006).

### Function

#### Inputs

The BC3250 can accept a signal from a Spirax Sarco CP10, CP30 or CP32 conductivity probe, and a Pt100 temperature sensor.

#### Function / outputs

If the water conductivity exceeds the Set Point, the valve relay will be energised until the conductivity drops below the Set Point. If the water conductivity exceeds the alarm level, the alarm relay will be de-energised until the conductivity drops below the alarm level.

#### Other features:

- Test function.
- Direct display of probe factor.
- Commissioning parameters protected with a pass code.

Recommended type	Alpha Wire 6413 or 6414			
LAN Cat 5 or Cat 5E Sctp (screened), FTP (foil) or STP (shielded) cable can be used, but limited to 600 m.				

# BC3250

## Blowdown Controller

### Technical data BC3250 (continued)

<b>Input technical data</b>	<b>Water conductivity</b>	Probes type:	CP10, CP30 and CP32	
			Minimum $\geq 1 \mu\text{S} @ 25^\circ\text{C} (77^\circ\text{F})$	
			0 – 9.99 ppm or $\mu\text{S}/\text{cm}$	
		Ranges		0 – 99.9 ppm or $\mu\text{S}/\text{cm}$
				0 – 999 ppm or $\mu\text{S}/\text{cm}$
				0 – 9990 ppm or $\mu\text{S}/\text{cm}$
			Accuracy	$\pm 2.5\%$ FSD (Poss > if high EMC)
		pH factor	0.50 – 1.00 (0.7 default)	
		Neutralising factor	0.7	
		Resolution	0.1% FSD	
	Drive:	ac – 4 wires		
	<b>Temperature compensation (TC)</b>	Sensor type	Pt100 – Class B or better	
		Range	0 - 250°C (32-482°F) (With Pt100 not fitted – user programmed temperature 100 - 250°C {212-482°F}, 1°C steps)	
		Accuracy	$\pm 2.5\%$ FSD – system accuracy $\pm 5\%$	
Resolution		1% FSD		
Drive:		dc – 3 wires		
<b>Burner input</b>		Input voltage range	110 – 240 Vac	
	Maximum current input	2 mA maximum		
<b>Probe cleaning</b>	Maximum voltage	32 Vdc		
	Drive	ac/dc/pulsed		
<b>Output technical data</b>	<b>4 - 20 mA</b>	Minimum current	0 mA	
		Maximum current	20 mA	
		Open circuit voltage (maximum)	19 Vdc	
		Resolution	1% FSD	
		Maximum output load	500 ohm	
		Isolation	100 V	
		Output rate	10 / second	
	<b>Relays</b>	Contacts	2 x single pole changeover relays (SPCO)	
		Voltage ratings (maximum)	250 Vac	
		Resistive load	3 amp @ 250 Vac	
		Inductive load	1 amp @ 250 Vac	
		ac motor load	$\frac{1}{4}$ HP (2.9 amp) @ 250 Vac	
			$\frac{1}{10}$ HP (3 amp) @ 120 Vac	
		Pilot duty load	C300 (2.5 amp) - control circuit/coils	
Electrical life (operations)	$3 \times 10^5$ or greater depending on load			
Mechanical life (operations)	$30 \times 10^6$			
<b>RS485</b>	Physical layer	RS485 4-wire full or 2-wire half duplex		
	Protocol	Modbus RTU format		
	Isolation	60 Vac/dc		
	Receiver unit load	$\frac{1}{8}$ (256 devices - maximum)		
	Output rate	Up to 10 frames / second		
<b>Infrared</b>	Physical layer	IrDA		
	Baud	38 400		
	Range	10 cm (4")		
	Working angle	15°		
Eye safety information	Exempt from EN 60825-12: 2007 Safety of laser products - does not exceed the accessible emission limits (AEL) of Class 1			

# BC3250

## Blowdown Controller

### Safety information, installation and maintenance

**Warning:** This document does not contain sufficient information to install the unit safely. The unit operates at a potentially fatal mains voltage. Before attempting to install the unit read the Installation and Maintenance Instructions supplied with it.

The product must be installed in a suitable industrial control panel or fireproof enclosure to provide impact and environmental protection. A minimum of IP54 (EN 60529) is required.

The product may be installed on a DIN rail, a chassis plate, or in a panel cut-out. A bezel is supplied.

Install the product in an environment that minimizes the effects of heat, vibration, shock and electrical interference.

**Do not** install the product outdoors without additional weather protection.

**Do not** attempt to open the product - it is sealed and has no replaceable parts or internal switches.

**Do not** cover or obstruct the infrared beam between products.

No special servicing, preventative maintenance or inspection of the product is required.

Boiler water level controls and level alarms do, however, require testing and inspection.

### Dimensions / weight (approximate)

Weight 1.21 lb

### How to specify

Blowdown controller with integral bottom blowdown timer and infrared comms.

### How to order

**Example:** 1 off Spirax Sarco BC3250 blowdown controller.

## BCV1 and BCV20 Blowdown Valves

### Description

The BCV1 and BCV20 valves are small bore, normally closed valves with a brass body and corrosion resistant internal components. They are primarily intended for low and medium pressure boiler blowdown applications.

BCV1 and BCV20 valves are identical apart from the orifice size, the BCV1 having a 3 mm (1/8") orifice and the BCV20 a 6 mm (1/4") orifice. Valves are supplied complete with a mains connector, which is protected to IP65 and is suitable for 3 x 1 mm<sup>2</sup> (18 AWG) cable.

### Available sizes and pipe connections

- 1/2" screwed BSP - 230 V version
- 1/2" screwed BSP - 110 V version
- 1/2" screwed NPT - 120 V version
- 1/2" screwed NPT - 120 V version (UL/CSA Listed)

### Limiting conditions

#### BCV1

Maximum boiler or steam pressure	14 bar g (203 psi g) (Intermittent operation)
Medium temperature range	-40 to +200°C (-40 to +392°F)
Medium	Water and steam
Maximum ambient temperature	55°C (130°F)

#### BCV1 (UL/CSA)

Maximum boiler or steam pressure	9 bar g (130 psi g)
Medium temperature range	-40 to +180°C (-40 to +356°F)
Medium	Water and steam
Maximum ambient temperature	55°C (130°F)

#### BCV20

Maximum boiler or steam pressure	4 bar g (58 psi g)
Medium temperature range	-40 to +180°C (-40 to +356°F)
Medium	Water and steam
Maximum ambient temperature	55°C (130°F)

### Electrical data

230 V version	207 V to 253 V
110 V version	99 V to 121 V
120 V version	108 V to 132 V
Frequency	50 - 60 Hz
Maximum power consumption	40 VA (inrush) 16 VA/12 W (hold)
Protection rating	IP65 (Nema 4)

### Materials

Body	Brass
Soft seal	PTFE
Internal components	Stainless steel

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-P403-60-US 11.11

# BCV1 and BCV20 Blowdown Valves

## Dimensions/weight (approximate) in mm (ins) and kg (lbs)

A	B	C	D	E	Weight
40 (1.57)	110 (4.33)	74.5 (2.93)	94.5 (3.72)	73 (2.87)	0.75 (1.65)

## Capacities

Model	BCV1	BCV20
Orifice size	3 mm (1/8")	6 mm (1/4")
C <sub>v</sub> value	0.3	0.9

For conversion: C<sub>v</sub> (UK) = K<sub>v</sub> x 0.963      C<sub>v</sub> (US) = K<sub>v</sub> x 1.156

When used for boiler blowdown purposes, the valve will be controlling a mixture of water and flash steam, so the following capacity table applies:-

Boiler pressure bar g (psi g)	Capacity kg/h (lb/h)	
	BCV1	BCV20
1 (14.5)	175 (385)	560 (1232)
2 (290)	250 (550)	790 (1738)
4 (580)	350 (770)	1120 (2464)
6 (870)	385 (847)	-
8 (1160)	445 (979)	-
10 (1450)	495 (1089)	-
14 (2030)	590 (1298)	-

When the BCV20 valve is used as part of the BCS2 blowdown control system, downstream of a steam trap, the following capacity table applies:-

Head across valve m (ft)	Cold water capacity kg/h (lb/h)	Hot water capacity with flash steam kg/h (lb/h)
1 (3)	253 (557)	63 (138)
2 (6)	358 (787)	90 (198)
3 (9)	438 (963)	110 (242)
5 (15)	566 (1245)	142 (312)
10 (30)	800 (1760)	200 (440)

## How to specify

### BCV1

Solenoid valves shall be Spirax Sarco normally closed blowdown valve type BCV1 or BCV1 (UL/CSA) with brass bodies and stainless steel valve seat with a PTFE seal.

### BCV20

Solenoid valves shall be Spirax Sarco normally closed, low pressure blowdown valve type BCV20 with brass bodies and stainless steel valve seat with a PTFE seal.

## How to order

**Example:** 1 off Spirax Sarco BCV1 or BCV20 blowdown valve having screwed NPT connections, 120 V.

## Spare parts

The spare parts available are detailed below. No other parts are supplied as spares.

### Available spares

Armature and spring set (kit).	Stock No. 4034080
Solenoid coil 230 V	Stock No. 4034081
Solenoid coil 110/120 V	Stock No. 4034082

### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the valve type.

**Example:** 1 off Armature and spring set (Stock No. 4034080) for a Spirax Spirax BCV20 blowdown valve.

# BCV43 Blowdown Control Valves 3/4" and 1 1/2"

## Description

Spirax Sarco's BCV blowdown control valves are manufactured using the market proven SPIRA-TROL body. These valves have been specifically designed for the blowdown of steam boilers or for other high pressure drop, low flow applications, and are generally used with a blowdown controller as part of an automatic TDS control system.

The flowrate is adjusted by setting the stroke of the valve spindle. These valves have been specially designed to minimize seat erosion and ensure consistent shut-off.

A 1/4" BSP plug at the base of the valve may be removed to allow a sample cooler to be fitted.

### Two versions are available:

- Electrically actuated TDS blowdown control valve. (Non-UL Listed)
- Pneumatically actuated TDS blowdown control valve.

Available model	Material	Connection
BCV43	Carbon Steel	Flanged

### SPIRA-TROL valve body options

<b>Stem sealing</b>	Graphite packing	High temperature applications
<b>Seating</b>	Hard facing	316L stainless steel with Stellite 6 facing

BCV blowdown control valves are compatible with the following actuators and positioners:

Version	Actuator	Positioners
<b>Electric</b>	AHL1 series	
<b>Pneumatic</b>	PN9_ _ _ series	PP5 (pneumatic)
		EP5 (electropneumatic)
		ISP5 (intrinsically safe electropneumatic)
		SP400 and SP500 (microprocessor based electropneumatic)

### Standards

These products fully comply with the requirements of the European Pressure Equipment Directive 97 / 23 / EC.

### Certification

These products are available with material certification to EN 10204 3.1. Note: All certification / inspection requirements must be stated at the time of order placement.

### Operation

BCV blowdown control valves are supplied in the normally closed position.

**Electrical version:** When the power is connected to the actuator the valve opens to the position set by the internal limit switch.

**Pneumatic version:** When the solenoid valve opens, air is admitted to the actuator activating the valve to open to the selected stroke.

\*AHL1 series electric actuator is not UL Listed

## Size and pipe connections

3/4" and 1 1/2" Flanged

ASME class 300

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-P403-102-US 8.14

# BCV43

## Blowdown Control Valves

### 3/4" and 1 1/2"

#### Materials

Please note that the spare parts available for the blowdown control valve are the same for both the electrically and pneumatically actuated versions.

No.	Part	Material
1.	Body	Carbon steel 1.0619+N / WCB
2.	Bonnet	Forged steel 1.0460 / A105N or 1.0619 / WCB
3.	Seat retainer	Stainless steel 316L
4.	Seat	Stainless steel 316L with Stellite
5.	Plug	Stainless steel 316L with Stellite

#### Electrical data

Actuator	AHL1 series
Supply voltage	Standard 24 Vdc and 110 Vac
Supply frequency	50 to 60 Hz
Power consumption	10 to 18 watts
Actuator speed	2 mm/s, 4 mm/s or 6 mm/s
Actuators thrust maximum	450 lbf (2kN)
Maximum shut-off value	600 psig (42 bar g)

Size	Actuator	Maximum shut-off value
1/2"	AHL1 series / PN9123E	600 psig (42 bar g)
1 1/2"	AHL1 series / PN9223E	600 psig (42 bar g)

Please note that the spare parts available for the blowdown control valve are the same for both the: - electrically and - pneumatically actuated versions.

#### Pressure/temperature limits – BCV43

Body design conditions: PN40, PN63, or PN100  
JIS/KS 20K, 30K, or 40K, ASME class 300

PMA	Maximum allowable pressure	51.1 bar g @ 38°C	741 psi g @ 100°F
TMA	Maximum allowable temperature	425°C @ 28.8 bar g	797°F @ 418 psi g
	Minimum allowable temperature	-29°C	-20°F
PMO	Maximum operating pressure for saturated steam service	41.7 bar g @ 254°C	605 psi g @ 489°F
TMO	Maximum operating temperature	425°C @ 28.8 bar g	797°F @ 418 psi g
	Minimum operating temperature	-29°C	-20°F

Designed for a maximum cold hydraulic test pressure of: 1.5 x PMA of the relative end connection of choice

The product **must not** be used in this region.  
**E - G** Flanged ASME class 300

## Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P403-103) supplied with the product.

**Installation note:** The blowdown control valve should preferably be installed with the actuator vertically above the pipework and the flow direction as indicated on the valve body. It can be fitted in other positions, but not upside down.

**Disposal:** This product is recyclable. No ecological hazard is anticipated with the disposal of the product, providing due care is taken.

## Spare parts

The spare parts available are detailed below. No other parts are supplied as spares.

**Please note** that the spare parts available for the BCV blowdown control valve are the same for both the electrically and pneumatically actuated versions.

### Available spares

Actuator clamping nut		<b>A</b>
Gasket set		<b>B, G</b>
Stem seal kits	Graphite packing	<b>C1</b>
Plug stem and seat kit	Linear trim (No gaskets supplied)	<b>D2, E</b>

### How to order spares

Always order spares by using the description given in the column headed 'Available spares', and state the size and type of valve and specify clearly the full product description as found on the label of the blowdown control valve body, as this will ensure that the correct spare parts are supplied.

**Example:** 1 off Actuator clamping nut for a Spirax Sarco 3/4" BCV43 blowdown control valve.

## MS1 Conductivity Meter

- Automatic temperature compensation
- Wide selectable range
- Automatic switch-off

### General description

The Spirax Sarco MS 1 is a battery powered conductivity meter designed for use with liquids. It is particularly suitable for measuring the conductivity of boiler water, feed water, or condensate samples in order to estimate the level of Total Dissolved Solids, or TDS.

The instrument is fitted with a permanently wired carbon electrode sensor with integral temperature sensor.

A plug-in extension lead is also provided to allow ac resistance measurements to be made on installed conductivity probes in order to check their condition. Calibration to a master instrument or standard solution is possible using the adjustment screw on the side of the case. The instrument is supplied in a protective wallet.

### Limiting conditions

Maximum recommended sensor operating temperature 113°F (45°C).

### Specification

Ranges	0 to 199.9µS/cm, 0 to 1.999mS/cm, 0 to 19.99mS/cm.
Range indication	Decimal Point and LED above selection key.
Temperature compensation	Automatic, 2%/°C. Reference temperature 77°F (25°C).
Resolution	0.1µS/cm.
Accuracy	+/-1.5% or +/-3 digits (whichever is greatest) at 77°F (25°C).
Calibration range	+/-20%. 20 turns (approx).
On/off	Auto-off timer.
Sensor	PVC cell with carbon electrodes.
Extension cable	Twin core, jack plug and crocodile clips.
Battery	PP3 or equivalent. A low battery warning indicator is fitted.

### Dimensions (approx in inches and millimeters)

Instrument	3.2" x 5.8" x 1.5" (80 x 147 x 39)
Sensor cable	36" (1000)
Extension cable	36" (1000)
Weight	1lb (430g) with case

### How to specify

1 - Spirax Sarco MS 1 Conductivity Meter.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

Boiler Controls

Boiler Blowdown & CCD

## SC20 Sample Coolers

### Description

The Spirax Sarco SC20 sample cooler is used to cool samples of boiler water or steam. The cooler consists of a stainless steel coil, through which the sample flows, and a stainless steel body, through which cooling water flows in the opposite direction. A pre-drilled mounting bracket is incorporated into both end caps. The SC20 is also available with a clamp adaptor for connecting to an industry standard 1/2" sanitary clamp fitting.

### Principal features:

- For boiler water, steam, or condensate sampling.
- Stainless steel body and coil to minimise corrosion.
- Counter current flow for efficient cooling.

### Available types:

NPT connections (6 mm O/D tube). A 1/4" NPT male x 6 mm O/D stud coupling is supplied loose for connecting the sample inlet tube to an NPT inlet valve or fitting.

A kit (SCS20), as above, but with stainless steel fittings.

A sample cooler NPT with a clamp adaptor suitable for connection to an industry standard 1/2" sanitary clamp fitting (clamp not supplied).

Special sanitary sample coolers (SSC20) are also available in NPT. They have a stated coil internal finish. See separate literature for further details.

**Note: The SC20 sample cooler is not polished or specially treated internally, and the internal finish of the coil is not specified.**

**Stainless steel couplings are also available separately:-**  
1/4" NPT male x 6 mm O/D tube.

### Pressure / temperature limits

#### Coil

■ The product **must not** be used in this region.

#### Body

Maximum design pressure	145 psig @ 212°F
Maximum design temperature	212°F @ 145 psig
Designed for a maximum cold hydraulic test pressure of 282 psig	

**Note:** The pressure/temperature limits for the clamp adaptor are dependant on the manufacturer's recommendations

#### Materials

<b>Coil</b>	Austenitic stainless steel	Grade 316L
<b>Body</b>	Austenitic stainless steel	

### Sizes and pipe connections

<b>Cooling water inlet and outlet connections</b>	NPT version	1/2" NPT
	Clamp adaptor versions	1/2" NPP
<b>Sample tube inlet and outlet connections</b>	NPT version	6 mm O/D*
	Clamp adaptor versions	6 mm O/D with 1/2" adaptor for clamp fitting

\* A 1/4" NPT male x 6 mm O/D stud coupling is provided.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-10-3705-US 6.14

# SC20 Sample Coolers

## Performance

The tables below show typical sample outlet temperatures above cooling water inlet temperatures for several pressures and cooling water flowrates.

## Example

A sample flowrate of 0.13 GPM is required from a boiler operating at 145 psig. For a cooling water flowrate of 4.8 GPM from Table 1 the sample outlet temperature would be 7°F above the cooling water inlet temperature. If the cooling water is at 60°F, the sample temperature would be 67°F. Table 2 is used in the same way for steam.

Samples may not be taken where marked '-' as the flow is limited by the sample inlet valve capacity.

**Table 1 Saturated water (e.g. boiler water)**

# SC20 Sample Coolers

## Dimensions (approximate) in inches

A	B	C	D	E	F	G	H	J
16.1	13.8	11.8	3.5	1.0	0.9	0.5	17.7	2.2

## Weights (approximate) in pounds

Cooler	6.8 lbs
SCS20 system	9.3 lbs

## Accessories and Spare Parts

The spare parts available are listed below. No other parts are supplied as spares.

### Available spares:

Component	Stock number
Sample inlet valve NPT	4037990
Stud coupling 1/4" NPT male x 6 mm stainless steel (for connecting SC20 to an NPT valve or fitting)	0963209

## Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions supplied with the product.

### WARNING:

- To avoid the risk of scalding, it is essential that a full flow of cooling water is present before opening the sample inlet valve.
- Always close the sample inlet valve before turning off the cooling water.
- Sample pipework becomes very hot under normal working conditions, and will cause burns if touched.

### Installation note:

The sample inlet to the cooler can be taken direct from a boiler or steam line isolating valve, or if a Spirax Sarco TDS control system is fitted, from the take-off point provided on the blowdown valve. We recommend that a tundish piped to drain is located under the outlet, with sufficient space below it for a beaker or similar sample container. Installation & Maintenance Instructions, IM-P403-66.

### Maintenance note:

No routine maintenance is required.

### How to order

**Example:** 1 off Spirax Sarco SC20 sample cooler having NPT connections.

Controls**

**Boiler Blowdown  
& CCD**

## BT1050 Boiler Blowdown Timer

### Description

The BT1050 is a timer for the control of a bottom blowdown valve. It allows the bottom blowdown valve to open, removing precipitated solids that could otherwise build up and eventually cause damage.

The BT1050 has three timers. These allow different blowdown cycle times and durations to be set, for example, MON - FRI. Up to three blowdown cycles can be selected in one day. The timers can also be used to prioritise boiler blowdown cycles.

The product can be panel, DIN rail or chassis mounted and is powered by a 110 to 240 Vac at 50/60 Hz mains supply.

The front panel has an LCD graphic display and five-button keypad.

A test function provides the operator with a diagnostic tool.

The BT1050 can communicate via an infrared link between adjacent units. It can be designated as either a slave or a master unit, and connected to a two or four wire EIA/TIA-485 multi-drop network.

Up to nine BT1050 (or BT1000) units can be installed and linked for multi-boiler installations.

### Approvals

The BT1050 complies with Electromagnetic Compatibility Directive 2004/108/EC and all its requirements.

This product is suitable for Class A environments (e.g. industrial). A fully detailed EMC assessment has been made and has the reference number UK Supply BH BT1050 2008.

The BT1050 complies with the Low Voltage Directive (2006/95/EC) by meeting the standards of:

- EN 61010-1:2010 safety requirements for electrical equipment for measurement, control, and laboratory use.

### Principal features:

- Purpose designed for bottom blowdown duties.
- Three separately adjustable timers.
- Straightforward to commission – quick set-up option.
- Universal power supply - 110 Vac to 240 Vac.
- Timers prevent boilers from blowing down in rapid succession.
- Warns if valve fails to open or close.

## Boiler Blowdown Timer

### Technical data BT1050

<b>Power supply</b>	Mains voltage range	110 Vac to 240 Vac at 50/60 Hz		
	Power consumption	7.5 W (maximum)		
<b>Environmental</b>	General	Indoor use only		
	Maximum altitude	2 000 m (6 562 ft) above sea level		
	Ambient temperature limits	0 - 55°C (32-131°F)		
	Maximum relative humidity	80% up to 31°C (88°F) decreasing linearly to 50% at 40°C (104°F)		
	Overvoltage category	III		
	Pollution degree	2 (as supplied) 3 (when installed in an enclosure) - Minimum of IP54		
	Enclosure rating (front panel only)	IP65 (verified by TRAC Global)		
	LVD (safety)	Electrical safety EN 61010-1		
	EMC	Immunity	EN 61326: A1 + A2 Annex A Table 1 for industrial locations	
		Emissions	EN 61326: A1 + A2 Class A Table 4	
	Enclosure	Material	Polycarbonate	
Front panel	Material	Silicone rubber, 60 shore.		
Solder	Tin/lead (60/40%)			
<b>Mains and signal connector</b>	Termination	Rising clamp plug-in terminal blocks with screw connectors. <b>Caution:</b> Use only the connectors supplied by Spirax Sarco Ltd. Safety and Approvals may be compromised otherwise.		
	Cable size	0.2 mm <sup>2</sup> (24 AWG) to 2.5 mm <sup>2</sup> (12 AWG).		
	Stripping length	5 - 6 mm (0.2")		
<b>Cable/wire and connector data</b>	<b>Switch box and Lockout (link) circuit</b>	Type	High temperature	
		Shield type	Screened	
		Number of cores	2	
		Gauge	1 - 1.5 mm <sup>2</sup> (18 - 16 AWG)	
		Maximum length	100 m (328 ft)	
	<b>RS485 communication</b>	Recommended type	Prysmian (Pirelli) FP200, Delta Crompton Firetuf OHLS	
		Type	EIA RS485 twisted pair	
		Shield type	Screened	
		Number of pairs	2 or 3	
		Gauge	0.23 mm <sup>2</sup> (24 AWG)	
Maximum length	1200 m (4000 ft)			
Recommended type	Alpha wire 6413 or 6414			

Please note that LAN Cat 5 or Cat 5E ScTP (screened), FTP (foil) or STP (shielded) cable can be used, but limited to 600 m.

## Boiler Blowdown Timer

### Technical data BT1050 (continued)

<b>Input</b>	<b>Switch box</b>	Maximum voltage	32 Vdc (no load, open circuit)	
		Maximum current	3 mAdc (short circuit)	
	<b>Lockout (link)</b>	Maximum voltage	32 Vdc (no load, open circuit)	
		Maximum pulldown voltage	0.25 Vdc	
		Maximum current	1.5 mAdc	
<b>RS485</b>	Physical layer	RS485 4-wire full or 2-wire half duplex		
	Protocol	Modbus RTU format		
	Isolation	60 Vac/dc		
	Receiver unit load	1/8 (256 devices - maximum)		
	Output rate	Up to 10 frames / second		
<b>Clock calendar battery</b>	Type	AA (PCB tagged) Lithium Thionyl Chloride (Lithium content 0.65g)		
	Shelf life	10 year – with battery switch off @ TAMB: 25°C (77°F)		
	Working life	10 year – Mains power on 35 hours/week @ TAMB: 55°C (131°F)		
<b>Infrared</b>	Physical layer	IrDA		
	Baud	38400		
	Range	10 cm (4")		
	Working angle	15°		
	Eye safety information	Exempt from EN 60825-12: 2007 Safety of laser products ~ does not exceed the accessible emission limits (AEL) of class 1		
<b>Output</b>	<b>Relays</b>	Contacts	2 x single pole changeover relays (SPCO)	
		Voltage ratings (maximum)	250 Vac	
		Load	Resistive	3 amp @ 250 Vac
			Inductive	1 amp @ 250 Vac
		ac motor load	1/4 HP (2.9 amp) @ 250 Vac	
			1/10 HP (3 amp) @ 120 Vac	
		Pilot duty load	C300 (2.5 amp) - control circuit/coils	
		Electrical life (operations)	3 x 10 <sup>5</sup> or greater depending on load	
Mechanical life (operations)	30 x 10 <sup>6</sup>			

# BT1050 Boiler Blowdown Timer

## Dimensions/weight (approximate)

Weight (0.9 lb)

## Safety information, installation and maintenance

This document does not contain sufficient information to install the product safely. See the Installation and Maintenance Instructions supplied with the product, which gives full wiring, commissioning and operating instructions.

Attention is drawn to Safety Information Leaflet IM-GCM-10, as well as to any national regulations concerning blowdown. In particular, your attention is drawn to the danger of working on a shut down boiler whilst other boilers are operating.

### Warnings:

- Isolate the mains supply before installing the controller as live terminals at mains voltage are exposed.
- Only use the screws provided with the product.
- Do not install the product outdoors without additional weather protection.
- Do not drill the product case or use self-tapping screws.

### Caution:

- A 15 mm (0.6") gap is required between multiple controllers for cooling.

### Installation / environmental conditions:

Install the product in an environment that minimises the effects of heat, vibration, shock and electrical interference.

The product must be installed in a suitable industrial control panel or fireproof enclosure to provide impact and environmental protection. A minimum of IP54 (EN 60529) is required.

The product may be installed on a DIN rail, chassis plate, or in a panel cutout. A bezel is provided.

## How to specify

Blowdown timer with; three integral timers, LCD display, valve malfunction alarm and infrared communications.

## How to order

**Example:** 1 off Spirax Sarco BT1050 blowdown timer.

## KBV40i Key Operated Boiler Blowdown Valve

### Description

The key operated boiler blowdown valve consists of a carbon steel reduced bore ball valve with carbon reinforced PTFE seats and a key operated mechanism in stainless steel. Two types of key are sold as optional extras and are available as follows:

- **Standard length key.**
- **Extended length 'T' bar type key** for use where access to the valve is limited.

**To ensure compliance with boiler regulations** the key cannot be removed when the valve is open.

**Note:** The standard length key and extended length 'T' bar type key are sold separately. It is recommended that an extended length 'T' bar type key is purchased for valve sizes 2" and 2-½".

### Standards

These products comply with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the mark when so required.

ISO mounting in accordance with ISO 5211.

Antistatic device complying with ISO 7121 and BS 5351.

### Certification

These products are available with certification to EN 10204 3.1.

**Note:** All certification/inspection requirements must be stated at the time of order placement.

### Sizes and pipe connections

1", 1-¼", 1-½", 2", and 2-½" Flanged ASME (ANSI) B 16.5 Class 300.

#### Available flange options:

Flange	Face-to-face	Flange thickness
ASME (ANSI) 300	ASME B 16.10	ASME B 16.5

### Materials

<b>Body and insert</b>	Zinc plated carbon steel	ASTM A216 WCB
<b>Stem seals</b>	Antistatic R-PTFE	
<b>Vented ball</b>	Austenitic stainless steel	AISI 316
<b>Stem</b>	2-½"	Austenitic stainless steel AISI 316
	1" - 2"	Martensitic stainless steel AISI 420
<b>Seats</b>	Carbon and graphite reinforced PTFE	PDR 0.8

### Valve coefficients

Size	1"	1-¼"	1-½"	2"	2-½"
<b>Cv value</b>	34.6	46.2	93.6	119.1	227.8

### How to specify

1-½" key operated boiler blowdown valve, flanged ANSI300 with carbon reinforced seats and stainless steel key.

### How to order

**Example:** 1 off Spirax Sarco 1-½" KBV40i key operated boiler blowdown valve having ANSI300 flanged connections.

### Pressure / temperature limits

The product **must not** be used in this region.

Body design conditions	ASME 300
PMA Maximum allowable pressure	740 psig @ 100°F
TMA Maximum allowable temperature	500°F @ 0 psig
Minimum allowable temperature	20°F
PMO Maximum operating pressure for saturated steam service	250.1 psig
TMO Maximum operating temperature	500°F @ 0 psig
Minimum operating temperature	20°F
<b>Note:</b> For lower operating temperatures consult Spirax Sarco	
ΔPMX Maximum differential pressure is limited to the PMO	
Designed for a maximum cold hydraulic test pressure of 1109 psig	

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

## ABV40i Air Actuated Boiler Blowdown Valves

### Description

The Spirax Sarco ABV40i one piece end entry, reduced bore ball valves is fitted with 90° rotary spring return pneumatic actuator, for boiler blowdown duties. It is used in conjunction with a Spirax Sarco blowdown timer to provide timed control of bottom blowdown, ensuring that the recommended boiler blowdown cycles occur with minimum heat loss, avoiding duplication or omission. The pneumatic actuator, (which can also be operated with other non-corrosive gases), moves through 90° to open the valve, and has a spring return fail-close operation. A switch box is mounted on the actuator, and either or both microswitches may be wired to a Building Management System if required.

**Note:** The BT1050 blowdown timer uses one switch only to indicate 'valve fully closed' or 'valve not fully closed' positions, and does not indicate that the valve has opened fully. A solenoid valve is required, which may be directly mounted to the NAMUR (VDI/VDE 3845) interface on the actuator. A suitable solenoid valve may be selected from the Spirax Sarco MV range. Alternatively, an air supply may be connected directly to the actuator port 'A' (1/4" BSP), where it is necessary to install the solenoid valve remote from the actuator. A standard 1/4" BSP 3-way solenoid valve may also be used.

### 3-port/2-way NAMUR mounting solenoid types:

**MV11** - 230 Vac, **MV12** - 110 Vac, **MV13** - 24 Vac, **MV14** - 24 Vdc

The ABV40i must be installed with the flow in the direction of the arrow on the body.

### Principal features:

- Automatic timed blowdown minimises wasted heat.
- Suitable for boiler pressures up to 250.1 psig.
- Spring return for fail-safe operation.
- Pneumatic actuator for fast response.

### Standards

These products comply with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the **CE** mark when so required.

ISO mounting in accordance with ISO 5211.

Antistatic device complying with ISO 7121 and BS 5351.

### Certification

These products are available with certification to EN 10204 3.1.

**Note:** All certification/inspection requirements must be stated at the time of order placement.

### Sizes and pipe connections

1", 1-1/4", 1-1/2", 2", and 2-1/2" Flanged ASME B 16.5 Class 300.

### Available flange options:

Flange	Face-to-face	Flange thickness
ASME 300	ASME B 16.10	ASME B 16.5

### Technical data

Operating time (full stroke)	0.25 - 0.6 seconds	
Operating media	Clean compressed air Non-corrosive gas

## Safeguard Overheat Protection For 2 & 3 Port Temperature Control Valves

The Safeguard Overheat Protection system consists of the HL10 high limit cutout with a 130 control system and one of the valves listed below. The valve is installed upstream of a heating control valve or in parallel with a cooling control valve to provide secondary overheat protection. If the temperature at the sensor exceeds the setting, the HL10 cutout is activated to close a normally open valve or open a normally closed valve. The cutout must be reset manually. Failure of the 130 control system will activate the HL10 cutout. The HL10 is available with a microswitch which may be linked to an alarm system.

### Control Valves

Any of the following valves can be used by attaching the valve bonnet to the coupling nut of the HL10 high limit cutout.

	Normally Open (to close w/ rise in temp)	Normally Closed* (to open w/ rise in temp)
Two Port Valves	SB, KA, KB & KC valves	SBRA, KX, KY, NSRA valves
Three Port Valves	1", 1-1/2", 2" TW Valves	

\* Normally closed valves must be installed in a separate bypass pipe line unimpeded by any other control valve.

### 130 Control System

Standard capillary tube length is 6.5 ft 2 m. Other lengths are available up to a maximum of 32 ft 10 m. in multiples of 6.5 ft 2 m. The length of capillary tubing should be kept to a minimum to avoid the system's being affected by ambient temperature.

### Separable Well

For correct installation, a separable well with 3/4" NPT connection is required. The sensor is held in the separable well by means of a gland nut (V) and compression ring. Wells are available in copper, mild steel and stainless steel construction.

### Construction Materials

235	60	61	75	2.2 kg			
<b>130 Control System</b>							
<b>E</b>	<b>F</b>	<b>G</b>	<b>H</b>	<b>J</b>	<b>K</b>	<b>K1</b>	<b>Weight</b>
2.5	3.3	9.3	10	5.9	0.69	0.87	3.8 lb
64	83	235	25	150	17.5	21	1.7 kg

## Sample Specification

Spirax Sarco Safeguard (with microswitch), a spring loaded mechanism incorporating a cutout device and requiring hand reset. A brass hydraulically operated secondary overheat protection control system mounted in a separable well with PVC covered copper capillary tubing. The unit is coupled to a 2 port or 3 port valve.

## Temperature Setting

The system is set to operate at 140°F (60°C). The setting can be adjusted between 32°F (0°C) and 212°F (100°C). Full setting details are given in the Installation & Maintenance Instructions supplied with each control system and these should always be referred to. One turn of the setting screw changes the temperature by 11°F (6°C). On completion always replace the adjustment head cover.

## Resetting

Resetting can be swiftly carried out by using a lever between the two lugs L & M. Before resetting, it is most important to allow the equipment to cool and to remedy the cause of overheating.

## Optional Extras

A micro switch (10) is available, which can be connected into an alarm system, and can be arranged to either make or break the electrical circuit on firing of the cutout.

It is suitable for the following ratings:

	Voltage	Resistive Load Amps	Inductive Load Amps
AC	125	5	5
	250	5	5
	up to 15	10	10
DC	30	5	3
	50	1	1
	75	0.75	0.25
	125	0.5	0.06
	250	0.25	0.03

## Installation

Full details are given in the Installation & Maintenance Instructions, supplied with each unit.

## Testing

As an emergency device, it is advisable to test this unit occasionally. This should be done either by temporarily raising the temperature of the equipment being controlled or by adjusting down the temperature at which the cutout is normally set to operate.

Warning: The cutout device is spring loaded and should not be opened up by unskilled persons, nor should it be 'fired' other than when attached to the valve.

## Spare Parts

Micro Switch Assembly	A, B (2 each)
Conversion Kit	A, B (2 each), C (2 each), D

Available spare parts are shown in heavy outline. Parts drawn in broken line are not supplied as spares.

TI-1-1000-US 4.12

## Direct Acting Temperature Regulator 25 MT

The 25 MT is a self-actuated temperature control valve with a calibrated dial for accurate temperature setting. A variety of solid-fill sensing bulbs are available (see TI-1-1123-US). The standard capillary tubing length is 8 feet, with an optional standard length of 15 feet.

<b>Model</b>	25MT
<b>Sizes</b>	½"
<b>Connections</b>	NPT
<b>Construction</b>	Cast Iron
<b>Options</b>	BSP Connections Non-standard capillary tubing lengths (see TI-1-1123-US)

### Typical Applications

Small storage steam water heaters, instantaneous heat exchangers and converters, air handling coils, tank heating coils, steam jacketed vessels, steam chests, molds and platens.

### Sample Specification

The temperature control valves shall be self-actuated. The temperature setting shall be adjustable without the use of tools, and the set point shall be indicated on a calibrated dial. Thermostatic system shall be solid fill, and shall incorporate overheat protection.

### Construction Materials

No.	Part	Material	
1	"M" Body	Cast Iron	ASTM A 126 CL B

120°F to 180°F	50°C to 80°C	260°F to 320°F	125°C to 160°C

## Pressure Shell Design Conditions

**PMA** 250 psig/0-450°F 17 barg/0-232°C  
Max. allowable pressure

**TMA** 450°F/0-250 psig 232°C/0-17 barg  
Max. allowable temperature

## Installation and Maintenance

The regulator should be installed in a horizontal pipe with suitable by-pass and isolating valves. A steam trap must be installed upstream to prevent condensate from reaching the regulator. The trap and regulator should both be protected with a strainer. The thermostatic bulb must be carefully located in the medium being heated. Complete installation & maintenance instruction are given in IM-1-1125-US, which accompanies the product.

## BX and BXRA Bronze Self-Acting Control Valves

### Description

The BX range of two port valves are used in conjunction with Spirax Sarco SA control systems to provide a self-acting temperature control unit. Alternatively, they can be used as electrically actuated temperature control valves by fitting an EL3500 Series electric actuator with a suitable temperature transmitter and controller.

### Available Types

**BX** Normally open single seat with four different orifice sizes: BX2, BX3, BX4 and BX6.

**BXRA** Normally closed, single seat.

### Sizes and Pipe Connections

½" screwed NPT. (Option: BSP)

### Limiting Operating Conditions

#### Maximum Differential Pressure

<b>BX</b>	250 psi*	17 bar
<b>BXRA</b>	150 psi	10 bar

\* On liquid applications, the permissible maximum differential pressure may be affected by high static pressure. Please consult the factory if the application requires a large differential pressure with a high inlet pressure.

If the valve is to be used in this region, a spacer (stock #0467000) must be fitted between the valve and the control system to protect the control system from overheating.

The valves must not be used in this region

The valves may be used in this region provided that the above maximum differential pressures are not exceeded. Valves with ANSI flanges must not be used above flange limits.

SHUTOFF: ANSI CLASS IV

### Pressure Shell Design Conditions

<b>PMA</b>	362 psig/248°F	25 barg/120°C
Max. allowable pressure	253 psig/428°F	17.5 barg/220°C
	152 psig/500°F	10.5 barg/260°C

<b>TMA</b>	500°F/0-152 psig	260°C/0-10.5 barg
Max. allowable temperature		

### Typical Applications

Industrial or commercial applications using steam or hot water as a heating medium, or water for cooling.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

# BX and BXRA Bronze Self-Acting Control Valves

## Dimensions (nominal) in inches and millimeters

Size	A	B	Weight
½"	3.2	3.3	1.5 lb
(DN15)	80	83	0.7 kg

## C<sub>v</sub> at P Band\*

Valve	BX2	BX3	BX4	BX6	BXRA
C <sub>v</sub>	0.44	0.74	1.20	1.92	0.66
P Band (°F)*	5.4°	8°	8°	8°	8°

\* The proportional band (P Band) is the difference required between the desired set temperature and the actual controlled temperature to open the valve fully. The above figures apply to valves fitted with 121 or 123 control systems. For 122 or 128 systems, the P Band will be twice the amount shown.

Example: For a BX3 valve with a 122 control system, the valve will not fully open until the controlled temperature drops to 16°F below the set point.

## Capacities

For saturated steam sizing capacities, see TI-1-011-US. For water sizing capacities, see TI-1-012-US.

## Sample Specification

Control valve shall be bronze body with stainless steel trim. Valve is coupled to the appropriate temperature control system. This combined unit is self acting and provides proportional control action. The temperature control system shall be brass with PVC covered capillary or stainless steel sensor and capillary, oil filled, hydraulically operated; and shall incorporate packless glands and a gas filled overheat protection device. Temperature setting shall be adjustable while control is in service, include °F adjustment scale and shall incorporate a tamper proof device. When required, sensor bulb shall be mounted in a separable well for removal from the equipment. Refer to TI-1-900-US or TI-1-901-US for temperature control system details.

## Installation

The valve should be installed in a horizontal section of the heating or cooling medium inlet piping. The control system connection must point vertically downward. A bypass with suitable stop valves should be provided to permit servicing, and a Y-pattern strainer should be installed upstream of the valve. If the valve is smaller than the pipeline, eccentric reducers should be used. In a steam system, a steam trap should be installed upstream of the valve to ensure that the steam entering the valve is as dry as possible.

## Maintenance

Except for periodic cleaning of the upstream strainer, maintenance or servicing is normally required only if a malfunction is detected. Complete installation and maintenance instructions are given in the IM-S21-01 sheet, which accompanies the product.

# NS and NSRA Bronze Self-Acting Control Valves

## Dimensions (nominal) in inches and millimeters

Size DN	ANSI 300/150			Weight	
	A	B	C	NPT	Fig.
2½" 65	6.7 171	8.0 203	5.9 150	18.0 lb 8.1 kg	38.0 lb 17.2 kg
3" 80	7.6 194	9.2 236	6.3 160	30.0 lb 13.6 kg	50.0 lb 22.7 kg

## C<sub>v</sub> at P Band\*

Size	2½"	3
C <sub>v</sub>	75.6	109.2
P Band (°F)*	24°	24°

\*The proportional band (P Band) is the difference required between the desired set temperature and the actual controlled temperature to open the valve fully. The above figures apply to valves fitted with 121 or 123 control systems.

For complete sizing information, see TIS 1.011 (steam) or TIS 1.012 (water).

## Typical Applications

Industrial or commercial applications using steam or hot water as a heating medium, or water for cooling.

## Spare Parts

Body Gasket (pkt of 6) See item #2 in Construction Materials

## Sample Specification

Control valve shall be bronze body with bronze trim. Valve shall achieve ANSI Class II Shutoff. Valve is coupled to the appropriate temperature control system. This combined unit is self acting and provides proportional control action. The temperature control system shall be brass with PVC covered capillary or stainless steel sensor and capillary, oil filled, hydraulically operated; and shall incorporate packless glands and a gas filled overhear protection device. Temperature setting shall be adjustable while control is in service, include °F adjustment scale and shall incorporate a tamper proof device. When required, sensor bulb shall be mounted in a separable well for removal from the equipment. Refer to TI-1-900-US or TI-1-901-US for temperature control system details.

## Installation

The valve should be installed in a horizontal section of the heating or cooling medium inlet piping. The control system connection must point vertically downward. A bypass with suitable stop valves should be provided to permit servicing, and a Y-pattern strainer should be installed upstream of the valve. If the valve is smaller than the pipeline, eccentric reducers should be used. In a steam system, a steam trap should be installed upstream of the valve to ensure that the steam entering the valve is as dry as possible.

## Maintenance

Except for periodic cleaning of the upstream strainer, maintenance or servicing is normally required only if a malfunction is detected. Complete installation and maintenance instructions are given in the IMI sheet (IM-S21-01), which accompanies the product.

# spirax sarco

## KA 51, KB 51, KC 51 Bronze Valves

### Description

The KA, KB and KC range of two-port valves are used in conjunction with Spirax Sarco SA control systems to provide a self-acting temperature control unit. Alternatively, they can be used as electrically actuated temperature control valves by fitting an EL3500 Series electric actuator with a suitable temperature transmitter and controller.

#### KA 51

Normally open single seat with screwed connections.

#### KB 51

Normally open, single seat, with a bronzepressure balancing bellows.

#### KC 51

Normally open, single seat with stainless steel pressure balancing bellows with screwed connections. The pressure balancing bellows enables the valve to operate against higher differential pressures.

<b>Model</b>	KA 51, KB 51, KC 51

### KA 51

### KB & KC 51

### Limiting Operating Conditions

#### Maximum Differential Pressure

Size	KA 51*		KB 51		KC 51	
1	65psi	4.5 bar	150 psi	10 bar	—	—
1-1/4	43 psi	3 bar	130 psi	9 bar	—	—
1-1/2	29 psi	2 bar	118 psi	8.2 bar	232 psi	16 bar
2	22 psi	1.5 bar	100 psi	6.9 bar	200 psi	13.8 bar

\* On liquid applications, the permissible maximum differential pressure may be affected by high static pressure. Please consult the factory if the application requires a large differential pressure with a high inlet pressure.

If a KA 51 valve is to be used in this region, a spacer (stock #0467000) must be fitted between the valve and the control system to protect the control system from overheating. The KB & KC 51 valves cannot be used with a spacer, and are limited to 450°F

The valves must not be used in this region

The valves may be used in this region provided that the above maximum differential pressures are not exceeded.

## Typical Applications

Industrial or commercial applications using steam or hot water as a heating medium.

## Sample Specification (KB)

Control valve shall be bronze body with stainless steel trim and single seated. Valve shall achieve ANSI Class IV Shutoff. For operation against high differential pressures, valve shall be supplied with bronze pressure balancing bellows. Provide with screwed pipe connections. Valve is coupled to the appropriate temperature control system. This combined unit is self acting and provides proportional control action. The temperature control system shall be brass with PVC covered capillary or stainless steel sensor and capillary, oil filled, hydraulically operated; and shall incorporate packless glands and a gas filled overheat protection device. Temperature setting shall be adjustable while control is in service, include °F adjustment scale and shall incorporate a tamper proof device. When required, sensor bulb shall be mounted in a separable well for removal from the equipment. Refer to TIS 1.900 or 1.901 for temperature control system details.

## Installation

The valve should be installed in a horizontal section of the heating medium inlet piping. The control system connection must point vertically downward. A bypass with suitable stop valves should be provided to permit servicing, and a Y-pattern strainer should be installed upstream of the valve. If the valve is smaller than the pipeline, eccentric reducers should be used. In a steam system, a steam trap should be installed upstream of the valve to ensure that the steam entering the valve is as dry as possible.

## Maintenance

Except for periodic cleaning of the upstream strainer, maintenance or servicing is normally required only if a malfunction is detected. Complete installation and maintenance instructions are given in the IMI sheet (IM-S21-01), which is available upon request.

## C<sub>v</sub> AT P BAND\*

Size	1	1-1/4	1-1/2	2
KA & KB	11.4	19.2	27.6	39.6
P Band (°F)*	12.4°	20°	22.5°	23.8°
KC	—	—	19.2	39.6
P Band (°F)*	—	—	20°	23.8°

\* The proportional band (P Band) is the difference required between the desired set temperature and the actual controlled temperature to open the valve fully. The above figures apply to valves fitted with 121 or 123 control systems. For 122 or 128 systems, (which cannot be used on valves larger than 1") the P Band will be twice the amount shown.

Example: For a 1" KA 51 valve with a 122 control system, the valve will not fully open until the controlled temperature drops to 24.8°F below the set point.

For complete sizing information, see TIS 1.011 (steam) or TIS 1.012 (water).

## Typical Applications

Industrial or commercial applications using water as a cooling medium.

## Sample Specification (KY)

Control valve shall be bronze body with stainless steel trim and single seated. Valve shall achieve ANSI Class IV Shutoff. For operation against high differential pressures, valve shall be supplied with pressure balancing bellows. Provide with screwed pipe connections. For continuous minimum flow requirements, valve to be fitted with bleed bypass. Valve is coupled to the appropriate temperature control system. This combined unit is self acting and provides proportional control action. The temperature control system shall be brass with PVC covered capillary or stainless steel sensor and capillary, oil filled, hydraulically operated; and shall incorporate packless glands and a gas filled overheat protection device. Temperature setting shall be adjustable while control is in service, include °F adjustment scale and shall incorporate a tamper proof device. When required, sensor bulb shall be mounted in a separable well for removal from the equipment. Refer to TIS 1.900 or 1.901 for temperature control system details.

## Installation

The valve should be installed in a horizontal section of the cooling medium inlet piping. The control system connection must point vertically downward. A bypass with suitable stop valves should be provided to permit servicing, and a Y-pattern strainer should be installed upstream of the valve.

## Maintenance

Except for periodic cleaning of the upstream strainer, maintenance or servicing is normally required only if a malfunction is detected. Complete installation and maintenance instructions are given in the IMI sheet, which accompanies the product.

# KA 43, KB 43 and KC 43 Cast Steel Valves

Dimensions (nominal) in inches and millimeters						
Size	ANSI 300		Weight			
	B	C	C1	KA	KB/KC	
1/2	5.1	4.1	-	9.5 lb	-	
	130	105		4.3 kg		
3/4	5.9	4.1	-	13.9 lb	-	
	150	105		6.3 kg		
1	6.3	4.1	5.4*	17.6 lb	18.1 lb	
	160	105	138	8.0 kg	8.2 kg	
1-1/4	7.1	4.3	6.0	19.2 lb	20.0 lb	
	180	110	152	8.7 kg	9.1 kg	
1-1/2	8.0	4.3	6.0	24.4 lb	22.3 lb	
	202	110	152	9.7 kg	10.1 kg	
2	9.2	4.3	7.3	32.2 lb	33.1 lb	
	232	110	187	14.6 kg	15.0 kg	

\* KC 43 is not available in 1" size

## Pressure Shell Design Conditions

**PMA** 362 psig/248°F 25 barg/120°C  
 Max. allowable pressure 290 psig/482°F 20 barg/250°C  
 188 psig/750°F 13 barg/400°C

**TMA** 750°F/0-188 psig 400°C/0-13 barg  
 Max. allowable temperature

## Typical Applications

Small process applications using steam or hot water as a heating medium.

## C<sub>v</sub> at P Band\*

Size	1/2	3/4	1	1-1/4	1-1/2	2
KA & KB	3.36	5.4	11.4	19.2	27.6	39.6
KC				19.2	19.2	39.6
P Band (°F)*	8°	10°	12.4°	20°	22.5°	23.8°

\* The proportional band (P Band) is the difference required between the desired set temperature and the actual controlled temperature to open the valve fully. The above figures apply to valves fitted with 121 or 123 control systems. For 122 or 128 systems, (which cannot be used on valves larger than 1") the P Band will be twice the amount shown.

Example: For a 1" KA 43 valve with a 122 control system, the valve will not fully open until the controlled temperature drops to 24.8°F below the set point. For complete sizing information, see TIS 1.011 (steam) or TIS 1.012 (water).

## Sample Specification

Control valve shall be steel body with stainless steel trim, single seated with flanged pipe connections. Valve shall achieve ANSI Class IV Shutoff. Valve is coupled to the appropriate temperature control system. This combined unit is self acting and provides proportional control action. The temperature control system shall be brass with PVC covered capillary or stainless steel sensor and capillary, oil filled, hydraulically operated; and shall incorporate packless glands and a gas filled overheat protection device. Temperature setting shall be adjustable while control is in service, include °F adjustment scale and shall incorporate a tamper proof device. When required, sensor bulb shall be mounted in a separable well for removal from the equipment. Refer to TIS 1.900 or 1.901 for temperature control system details.

## Installation

The valve should be installed in a horizontal section of the heating medium inlet piping. The control system connection must point vertically downward. A bypass with suitable stop valves should be provided to permit servicing, and a Y-pattern strainer should be installed upstream of the valve. If the valve is smaller than the pipeline, eccentric reducers should be used. In a steam system, a steam trap should be installed upstream of the valve to ensure that the steam entering the valve is as dry as possible.

## Spare Parts

<b>KA 43</b>	
Valve & Seat Assembly	A, D, E, L
Set of all Gaskets	E, L
Set of Bonnet Studs & Nuts (set of 4)	S
<b>KB &amp; KC 43</b>	
Valve & Seat Assembly	A, B, C, D, E, L, U, G
excluding Bellows & Push Rod	
Bellows & Push Rod Assembly	G, L, H, N
Set of all Gaskets	B, C, E, L, U, G
Set of Bonnet Studs & Nuts (set of 4)	S
Available spare parts are shown in heavy outline. Parts drawn in broken line are not supplied as spares.	

## Maintenance

Except for periodic cleaning of the upstream strainer, maintenance or servicing is normally required only if a malfunction is detected. Complete installation and maintenance instructions are given in the IMI sheet, which accompanies the product.

TI-1-808-US 06.10

## TW 3 Port Valve for Liquid Systems

The TW is a 3-way self actuated temperature control valve which may be used on liquid systems as either a diversion valve for heating or cooling, or a mixing valve for blending hot and cold water.

<b>Model</b>	TW
<b>Sizes</b>	3/4", 1", 1-1/2"
<b>Connections</b>	NPT
<b>Construction</b>	Bronze

### Limiting Operating Conditions

#### Maximum Differential Pressure

3/4" to 1-1/2" 50 psi 3.4 bar

### Operating Range

The valves must not be used in this region

The valves may be used in this region provided that the above maximum differential pressures are not exceeded. Valves with ANSI flanges must not be used above flange limits.

SHUTOFF: ANSI CLASS III

### Pressure Shell Design Conditions

**PMA** 362 psig/0-248°F 25 barg/120°C  
Max. allowable pressure 319 psig/0-392°F 22 barg/0-200°C

**TMA** 392°F/0-319 psig 200°C/0-22 barg  
Max. allowable temperature

### Typical Applications

Industrial or commercial applications using water as a heating or cooling medium.

### Construction Materials

No.	Part	Material	Material Spec.	Closest Equivalent
1	Body	Bronze	BS 1400 LG2	B62 UNS 83600
2	Piston	Bronze	BS 1400 LG2	B62 UNS 83600
3	Piston Sealing Ring	Carbon Impregnated PTFE		
4	Stem	Brass	BS 2874 CZ 121	B16M
7	Return Spring	Stainless Steel	BS 2056 302 S26	A313 Type 302
8	Return Spring Plate	Brass	BS 2874 CZ 121	B16M
11	Bonnet	Brass	BS 2874 CZ 121	B16M
12	Bonnet Gasket	Nickle Reinforced Exfoliated Graphite		

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

# TW 3 Port Valve for Liquid Systems

## Dimensions (nominal) in inches and millimeters Screwed

SIZE	A	C	D	WEIGHT
3/4"	3.8 97	2.3 58	2.1 54	2.7 lb 1.2 kg
1"	4.5 114	2.4 61	2.2 57	4.3 lb 1.9 kg
1-1/2"	5.9 151	3.0 76	2.8 70	8.5 lb 3.8 kg

## Sample Specification

Control valve shall be bronze body, bronze trim, piston balanced 3 port with screwed connections. Valve shall achieve ANSI Class III Shutoff. Valve is coupled to the appropriate temperature control system. This combined unit is self acting and provides proportional control action. The temperature control system shall be brass with PVC covered capillary or stainless steel sensor and capillary, oil filled, hydraulically operated; and shall incorporate packless glands and a gas filled overheat protection device. Temperature setting shall be adjustable while control is in service include, °F adjustment scale and shall incorporate a tamper proof device. When required, sensor bulb shall be mounted in a separable well for removal from the equipment. Refer to TIS 1.900 or 1.901 for temperature control system details.

## Piping Arrangements

Application	Port 'O'	Port 'X'	Port 'Z'
Diversion Valve - Heating	Flow in	to heating surface	to recirculation
Diversion Valve - Cooling	Flow in	to recirculation	to cooling surface
Mixing Valve	Blended Outlet	Hot flow in	Cold flow in

Note: Port 'X' closes on high temperature; port 'Z' closes on low temperature; Port 'O' is always open

## Cv Values

3/4"	1"	1-1/2"
5.4	10.5	24

For complete sizing information, see TIS 1.012

## Installation

The valve should be installed in a horizontal section of pipe with the control system connection pointing vertically downward. Suitable stop valves should be provided to permit servicing, and Y-pattern strainers should be installed in the inlet piping. The valve ports are marked 'O', 'X' and 'Z', and piping instructions are supplied with each valve.

## Maintenance

Except for periodic cleaning of the upstream strainer, maintenance or servicing is normally required only if a malfunction is detected. **Complete installation and maintenance instructions are given in the IMI sheet, which accompanies the product.**

## Spare Parts

Piston Sealing Ring 2", 3"	C, D, E
Piston Sealing Ring 3/4", 1 1/2"	C, E, F
Piston Set 3/4", 1 1/2"	A, C, E, F
Piston Set 2", 3"	A, B, C, D, E, J, H
Set of Cover Studs & Nuts	P

Available spare parts are shown in heavy outline. Parts drawn in broken line are not supplied as spares.

# spirax sarco

## Self Acting Temperature Control Systems

### Description

A range of self-powered control systems that incorporate sensor, actuator, set point adjustment/indicator for use with the following valve types:

2-port KA, KB, KC, KX, KY, SB, SBRA, BX, BXRA, BM, BMRA, BMF, BMFRA, NS, NSRA,

3-port TW

### Available Types

#### Set point adjustment at sensor

SA121	For use on	2-port valves	1/2" to 3"
		3-port valves	3/4" to 1-1/2"
SA128	For use on	2-port valves	1/2" to 1"
		3-port valves	3/4" and 1"

#### Set point adjustment at valve

SA122	For use on	2-port valves	1/2" to 1"
		3-port valves	3/4" and 1"

#### Remote set point adjustment

SA123	For use on	2-port valves	1/2" to 3"
		3-port valves	3/4" to 1-1/2"

Connection - NPT

### Optional Extras

Union Kit (SA122) Direct immersion

Pocket Indirect immersion

Material options include mild steel, copper, brass, stainless steel  
Glass option also available for SA122 and SA123 only

Wall bracket

Duct adaptor Duct mounting

Coiled Sensor Fast response

Nickel plating

Dial Type Set Point Adjuster

Pt100 Temperature Sensor SA122TP and SA123TP incorporate an internal pocket to accept a Pt100 sensor.

### Construction Materials

No	Part	Material
1	Sensor	Brass
2	Actuator	Brass
3	Capillary tube	Copper with a PVC coated armoured covering
4	Adjustment head	Polypropylene
*5	Union kit	Brass
6	Mounting bracket	Steel
7	Clip	Polypropylene
*8	Adaptor plate (Duct fixing adaptor)	Steel
*9	Pocket Brass	Mild steel BS 980 CEW2
		Copper BS 2871 C106
		Stainless steel BS 3605 CFS 316S 18
10	Liquid fill	Kerosene

\*Items 5,8, and 9 are shown overleaf

SA121 and  
SA128

SA123

### Temperature Ranges

#### Set point adjustment at sensor

SA121	Range 1	5° to 125°F (-15°C to 50°C)
	Range 2	105° to 225°F (40° to 105°C)
SA123	Range 3	205° to 320°F (95°C to 160°C)
	Over temperature protection	100°F (55°C) over set value to 375°F (190°C) maximum
SA122	Range 1	0° to 250°F (-20°C to 120°C)
	Range 2	105° to 340°F (40°C to 170°C)
Over temperature protection	100°F (55°C) over set value to 375°F (190°C) maximum	
SA128	Range 1	0° to 230°F (-20°C to 110°C)
	Range 2	105° to 340°F (40°C to 170°C)
Over temperature protection	100°F (55°C) over set value to 375°F (190°C) maximum	

### Capillary Tube

Standard length 2 m, 4m, 8m, and 20 m.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

## Union Kit (for sensor immersion without pocket)

Includes gland nut, compression ring and union nipple.

SA121, SA123 and SA128	Items Z, Y and X included with controller
SA122	Items W, V and U optional - not included

## Pockets (for indirect immersion)

Includes pocket, gland nut, and compression ring.

SA121, SA123 and SA128	Items T, Z, and Y
SA122	Items S, W, and V
Available materials	Mild steel, copper, brass and stainless steel

## Long Pockets (SA122 and SA123 only)

To special order only.

Having a minimum length 0.5m, maximum length to order.

Includes pocket, bracket and rubber bung.

SA121 and SA123	Items S, V, W and T, Z, Y
Available Materials	Mild steel, copper, brass and stainless steel

## Glass Pockets (SA122 and SA123 only)

To special order only.

Includes pocket, bracket and rubber bung.

SA122 and SA123	Items R, O, and P
-----------------	-------------------

## Wall Mounting Bracket (Item 6)

SA121, SA122, SA123 and SA128	Optional
-------------------------------	----------

## Duct Fixing Adaptor (for air sensing within ducts)

Includes adaptor plate, union nipple, compression ring and gland nut.

SA121, SA123 and SA128	Items 8, X, Y, and Z
SA122	Not available

© Spirax Sarco, Inc. 2011

## Temperature Control Ancillaries

### Twin Sensor Adaptor

When coupled to a 2 port or 3 port valve allows the valve to be operated by either actuator.

### Construction Materials

No.	Part	Material	
1	Body	Brass	BS 2872 CZ 122
2	Connector	Brass	BS 2872 CZ 121
3	Lower Body	Brass	BS 2872 CZ 121
4	Nipple	Brass	BS 2872 CZ 121
5	Valve Coupling Nut	Brass	BS 2872 CZ 121
6	Body Gasket	Compressed Asbestos Fiber	BS 2815 Gr. A
7	Push Rod	Brass	BS 2872 CZ 121
8	Plunger	Brass	BS 2872 CZ 121

### Dimensions (nominal) in inches & millimeters

A	B	Weight
4.2	2.3	1.6 lb
108	60	0.72 kg

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-1-903-US 06.95

# Temperature Control Ancillaries

## Spacer

When coupled between a 2 port or 3 port valve and the actuator, it enables the system to operate at a higher temperature. Each Valve has its individual limiting conditions, but when coupled to a Control System, these are governed by the brass actuator which is limited to 450°F (232°C). Installing the spacer between the valve and the control system enables the system to operate at a maximum temperature of 662°F (350°C).

## Limiting Conditions

**Maximum pressure** 362 psi 25 bar  
**Maximum temperature** 662°F 350 °C

## CONSTRUCTION MATERIALS

Part	Material
Case	Brass BS 2871 part 2 CZ 162
(1972) Bellows	Stainless Steel AISI 321

## Manual Actuator

When coupled to a 2 port or a 3 port valve, it enables the valve to be manually operated.

## Tamper Proof

The Unit is provided with a lockable head to prevent unauthorized tampering with the setting.

## Materials

Brass with plastic adjustment head

## Dimensions (nominal) in inches & millimeters

A	B	Weight
6.3	2.2	0.5 lb
160	55	0.2 kg

TI-1-903-US 06.95

# Steam Capacities 2 Port Valves

Unless a control valve is correctly sized, the most sensitive and accurate thermostat cannot give satisfactory control. If the valve is too big, it can cause a "hunting" and rapid wear on the valve head and seat due to wire drawing. Valves too small increase heat-up time and may be incapable of maintaining temperature on heavy load.

The capacity of any valve depends on the difference in pressure between the inlet and outlet (the pressure drop.)

In the case of steam valves, it also depends on the inlet pressure.

## Using the Steam Chart

Proper valve selection requires the following information:

- 1) Required flow in pounds of steam per hour.
- 2) Inlet steam pressure immediately ahead of the valve.
- 3) Allowable pressure drop across the valve. On steam applications where it is impossible to calculate the allowable pressure drop, 10% to 20% of the absolute inlet pressure should be used on most applications. Higher pressure drops imply low pressures within the heat exchanger and maximum heater rating may not be achieved.
- 4) Select valve which meets the above requirements and has suitable end connections and body materials.

## Valve Capacity Factors

Type	C <sub>v</sub>
1/2 BX2, BM2	0.44
1/2 BX3, BM4	0.74
1/2 BX4, BM4	1.20
1/2 BX6, BM6	1.92
1/2 SB	3.0
3/4 SB	4.5
1 SB	7.9
1/2 KA	3.36
3/4 KA	5.4
1 KA, KB	11.4
1-1/4 KB, KC	19.2
1-1/2 KB	27.6
1-1/2 KC	19.2
2 KB, KC	39.6
2-1/2 NS	75.6
3 NS	109.2

### 1. For Liquids

$$C_v = \text{GPM} \sqrt{\frac{\text{Sp. Gr.}}{\text{Pressure Drop, psi}}}$$

Where Sp. Gr. Water = 1  
GPM = Gallons per minute

### 2. For Steam (Saturated)

a. Critical Flow  
When ΔP is greater than  $F_L^2 (P_1/2)$

$$C_v = \frac{W}{1.83 F_L P_1}$$

b. Noncritical Flow  
When ΔP is less than  $F_L^2 (P_1/2)$

$$C_v = \frac{W}{2.1 \sqrt{\Delta P (P_1 + P_2)}}$$

Where:

P<sub>1</sub> = Inlet Pressure psia

P<sub>2</sub> = Outlet Pressure psia

W = Capacity lb/hr

F<sub>L</sub> = Pressure Recovery Factor

(.9 on globe pattern valves for flow to open)

(.85 on globe pattern valves for flow to close)

### 3. For Air and Other Gases

a. When P<sub>2</sub> is 0.53 P<sub>1</sub> or less,

$$C_v = \frac{\text{SCFH} \sqrt{\text{Sp. Gr.}}}{30.5 P_1}$$

Where Sp. Gr. of air is 1.  
SCFH is Cu. ft. Free Air per Hour at 14.7 psia, and 60°F.

b. When P<sub>2</sub> is greater than 0.53 P<sub>1</sub>,

$$C_v = \frac{\text{SCFH} \sqrt{\text{Sp. Gr.}}}{61 \sqrt{(P_1 - P_2) P_2}}$$

Where Sp. Gr. of air is 1.  
SCFH is Cu. Ft. Free Air per Hour at 14.7 psia, and 60°F.

### 4. Correction for Superheated Steam

The required Valve C<sub>v</sub> is the C<sub>v</sub> from the formula multiplied by the correction factor.

Correction Factor =

1 + (.00065 x degrees F. superheat above saturation)

Example: With 25°F of

Superheat, Correction Factor

= 1 + (.00065 x 25)

= 1.01625

### 5. Correction for Moisture Content

Correction Factor =

√Dryness Fraction

Example: With 4% moisture,

Correction Factor = √1 - 0.04

= 0.98

### 6. Gas—Correction for Temperature

Correction Factor =

$$\sqrt{\frac{460 + ^\circ\text{F}}{520}}$$

Example: If gas temperature is 150°F, Correction Factor =

$$\sqrt{\frac{460 + 150}{520}} = 1.083$$

## Direct Operated Pressure Regulator 25MP

The 25MP is a direct acting steam pressure reducing valve. Downstream pressure is fed back through an external sensing line.

<b>Model</b>	<b>25MP</b>
<b>Sizes</b>	½"
<b>Connections</b>	NPT
<b>Construction</b>	Cast Iron

### Construction Materials

No.	Part	Material	
1	Body	Cast Iron	ASTM A 126 CL B
2	Lower Diaphragm Housing	Cast Iron	ASTM A 126 CL B
3	Diaphragm Bolts	Steel	ASTM A449
4	Upper Case Diaphragm	Cast Iron	ASTM A 126 CL B
5	Adjustment Screw	Stainless Steel	AISI 300 series
6	Jam Nut	Brass	ASTM B16
7	Adjustment Spring	Carbon Steel	AISI 1060
8	Spring Plate	Steel	ASTM A 569
9	Diaphragm Plate	Brass	ASTM 36(260)
10	Diaphragm	Phosphor Bronze	ASTM B 103 Alloy A
11	Stem	Stainless Steel	AISI 303
12	Valve Head	Stainless Steel	AISI 440A
13	Valve Seat	Stainless Steel	400 Series STN Steel
14	Stem Guide	Stainless Steel	AISI 303
15	Stem Guide Gasket	Stainless Steel	AISI 302
16	Pilot Valve Spring	Stainless Steel	AISI 302
17	Pilot Valve Assy. Gasket	Graphite	AISI 302
18	Cover Plate	Stainless Steel	AISI 300 Series
19	Retaining Ring	Brass	ASTM B 36

### Limiting Operating Conditions

**Max. Operating Pressure (PMO)** 250 psig (17 barg)

**Max. Operating Temperature** 450°F (232°C)

### Downstream Pressure Ranges

For the following downstream pressures, three color-coded pilot valve springs are available:

**Yellow:** 3 to 30 psi    **Blue:** 20 to 100 psi    **Red:** 80 to 250 psi  
 0.2 to 2.8 bar    2.8 to 10.3 bar    10.3 to 13.8 bar

### Typical Applications

Small steam pressure reducing applications where an 80% to 90% accuracy of regulation is acceptable.

### Dimensions (nominal) in inches and millimeters

Size	A	B	C	Weight
½"	3.5 89	4.9 125	9.75 248	9.75 lb 4.45 kg

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

# Direct Operated Pressure Regulator 25MP

## Capacity – Pounds of saturated steam per hour at 80% accuracy of regulation

Inlet Steam Pressure psig	Reduced Steam Pressure

for kg/hr, multiply by .454

## Capacity & Accuracy of Regulation

Capacity of the type MP regulator is based upon the accuracy of regulation of the reduced pressure, and chart values are given for an accuracy of regulation of 80%. This means that, for example, at a reduction of 100 psi to 20 psi, the capacity will be 85 lbs/hr when the reduced pressure drops to 80% of the 20 psi initial setting or 16 psi.

The following multipliers can be used to determine the capacity for other percent of accuracy of regulation values.

Accuracy of Regulation	Capacity Chart Multiplier
75%	1.25
80%	1.0
85%	0.75
90%	0.5

## Sample Specification

The pressure regulator shall be direct-acting with an external pressure sensing line. The valve trim shall be hardened stainless steel, and the body shall be cast iron.

## Installation

The regulator should be installed in a horizontal line with suitable bypass and isolating valves. A steam trap should be installed upstream to prevent condensate from reaching the regulator. The trap and regulator should both be protected with a strainer. The pressure sensing line should be located in a straight section of the downstream piping at least 10 pipe diameters from the nearest fitting, or in the steam space.

## Maintenance

Complete installation and maintenance instructions are given in IM-3-104-US, a copy of which is supplied with each valve.

## Spare Parts

Cover Plate w/ Retaining Ring	A4, B4
Pilot Screws w/ Gasket	B, W
Adjustment Screw w/ Nut, and Upper and Lower Spring Support Disc	G4, H4 J4
Adjustment Spring	K4
Specify controlled pressure and spring color	
Yellow	3 to 30 psi
Blue	20 to 100 psi
Red	80 to 250 psi
Diaphragm Assembly	L4
Stem Guide w/ Gasket	M4, N4
Head & Seat Assembly w/ Gasket	S4, T4
Square Gasket for all Pilots (set of 3)	W

# spirax sarco

## Direct Operated Pressure Regulator LRV2

The LRV2 is a direct operated pressure regulator suitable for liquid applications.

<b>Model</b>	LRV2S (Stainless Steel Bellows)
<b>Sizes</b>	1/2", 3/4", 1"
<b>Connections</b>	NPT
<b>Construction</b>	Bronze
<b>Options</b>	LRV2B with phosphor bronze/brass bellows.

### Construction Materials

No.	Part	Material Spec.	
1	Spring Housing	Aluminum - Epoxy coated	LM 24
2	Adjustment Hand Wheel	Plastic - Polypropylene	
3	Top Spring Plate	Cast Iron	DIN 1691 GG 20
4	Pressure Adjustment Spring	Silicone Chrome Spring Steel	BS 2803 685 A55 Range 2
5	Bellows Assembly	Stainless Steel	316Ti/316L
6	Bellows Assembly Gasket	Reinforced Exfoliated Graphite	
7	Cap Screws	Steel - Zinc plated M8 x 25 mm	BS 3692 Gr 8.8
8	Body	Bronze	BS1400 LG2
9	Guide Bush	Graphite filled PTFE	
10	Pushrod	Stainless Steel	ASTM A276 316L
11	Valve Seat	Stainless Steel	BS 970 431 S29
12	Valve Seat Gasket	Stainless Steel	BS 1449 316 S11
13	Piston	Stainless Steel	BS970 431 S29
14	Valve Head	Nitrile Rubber	
15	Piston Return Spring	Stainless Steel	BS2056 Gr302 S26
16	Strainer Screen	Stainless Steel	BS 1449 304 S16
17	Cap	Brass	BS 2872 CZ 122
18	Cap Gasket	Reinforced Exfoliated Graphite	
19	Spring Range ID Plate	Polypropylene	
20	Bulkhead Plate	Stainless Steel	316L
21	Tamperproof Pin	Mild Steel - Copper Plated	

### Limiting Operating Conditions - Liquid

<b>Max. Upstream Pressure</b>	200 psig (14 barg)
<b>Max. Downstream Pressure</b>	115 psig (8.6 barg)
<b>Max. Cold Hydraulic Test</b>	550 psig (38 barg)

Do not use in this region

### Downstream Pressure Ranges

For the following downstream pressures, three color-coded springs are available. Where the pressures overlap, use the lowest pressure spring to give the downstream pressure required:

<b>Grey:</b> 5 to 25 psi 0.14 to 1.7 barg	<b>Green:</b> 20 to 60 psi 1.4 to 4.0 barg	<b>Orange:</b> 51 to 125 psi 3.5 to 8.6 barg
--	---	---

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-3-103-US 03.10

# Direct Operated Pressure Regulator LRV2

## Capacities – Water capacities in gpm

Full lift capacities for safety valve sizing are shown below:

$Cv_s$ ( $Kv_s$ )	1/2" (DN15)	3/4" (DN20)	1" (DN25)
	2.4 (2.1)	4.2 (3.6)	5.0 (4.3)

### How to use the chart

The curved lines labelled 45, 70, 105, etc., represent upstream pressures. Downstream pressure is read along the vertical line on the left hand side of the chart.

#### Example:

Required, a reducing valve to pass water at the rate of 11.7 gpm reducing from 105 to 60 psi. From the downstream pressure of 60 psi on the left hand side of the chart extend out horizontally until the line meets the curved 105 upstream line. At the point read vertically downwards where it will be seen that a 1/2" valve (with a 50-125 psi spring) will be required.

### How to order

1-1/2" Spirax Sarco LRV2 Pressure Reducing Valve with Bronze body and fitted with orange spring (50 to 125 psi).

### Installation

The valve should be installed in a horizontal pipeline with the direction of flow as indicated by the arrow on the valve body. Full installation and maintenance instructions are supplied with the product. (IM-P001-08)

## Spare Parts

### Spare Parts

The spare parts available are shown in heavy outline. Parts drawn in broken line are not supplied as spares.

#### AVAILABLE SPARE

* Pressure Adjustment Spring		
Grey	0.35/1.7 bar g	D, Q
Green	1.4/4.0 bar g	D, Q
Orange	3.5/8.6 bar g	D, Q
* Bellows Assembly - Stainless Steel		E, F
* Spring Housing Hex Bolts (set of 4)		G
* Piston and Seat Assembly		F, R, L, M, V, U, T, S
* Gasket Set		F, M, S
* Screen		T

\* Common to all sizes

#### How to order

Always order spares by using the description given in the column headed Available Spare and stating the size, type and pressure range of the reducing valve.

Example: Pressure Adjustment Spring, pressure range 50-125 psi (orange) for 1/2" Spirax Sarco Type LRV2S Reducing Valve.

# spirax sarco

## Direct Operated Pressure Regulator BRV2S

<b>Model</b>	BRV2S (Stainless Steel Bellows)
<b>Sizes</b>	1/2", 3/4", 1"
<b>Connections</b>	NPT
<b>Construction</b>	Ductile Iron

The BRV2 is a direct acting pressure reducing valve suitable for steam or gases, such as compressed air.

### Construction Materials

### Limiting Operating Conditions - steam or gas

<b>Max. Upstream Pressure</b>	275 psig (19 barg)
<b>Max. Downstream Pressure</b>	125 psig (8.0 barg)
<b>Max. Operating Temperature</b>	410°F (210°C)
<b>Max. Cold Hydraulic Test</b>	550 psig (38 barg)
<b>Max. Recommended Turndown Ratio</b>	10:1 psig at Maximum Flow
<b>Shutoff ANSI Class IV</b>	

### Pressure/temperature limits

### Downstream Pressure Ranges

For the following downstream pressures, three color-coded springs are available. Where the pressures overlap, use the lowest pressure spring to give the downstream pressure required:

<b>Grey:</b> 2 to 25 psig 0.14 to 1.7 barg	<b>Green:</b> 20 to 60 psig 1.4 to 4.0 barg	<b>Orange:</b> 50 to 125 psig 3.5 to 8.6 barg
---	--	--

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

### Typical Applications

Small steam or gas pressure reducing applications.

### Dimensions (nominal) in inches and millimeters

Size	A	C	D	E	Weight
				Withdrawal Distance	
1/2" DN15	3.3 83	2.2 55	5.0 126.5	1.0 25	3.4 lb 1.55 kg
3/4" DN20	3.8 96	2.2 55	5.0 126.5	1.0 25	3.6 lb 1.65 kg
1" DN25	4.25 108	2.2 55	5.0 126.5	1.0 25	4.2 lb 1.90 kg

# Direct Operated Pressure Regulator BRV2S

## Capacities – Saturated steam capacities in lb/h

Full lift capacities for safety valve sizing are shown below:

$C_v$ ( $Kv$ )	1/2" (DN15)	3/4" (DN20)	1" (DN25)
	1.8 (1.5)	2.9 (2.5)	3.5 (3.0)

## How to use the chart

The curved lines labelled 30, 45, 60, etc., represent upstream pressures. Downstream pressures are read along the vertical line on the left hand side of the chart.

### Example:

Required, a reducing valve to pass 160 lb/h reducing from 150 to 60 psi. From the downstream pressure of 60 on the left hand side of the chart extend out horizontally until the line meets the curved 150 psi upstream line. At this point, read vertically downward where it will be seen that 1/2" BRV2S will be required.

## Installation and Maintenance

The valve should be installed in a horizontal pipeline with the direction of flow as indicated by the arrow on the valve body.

When the required set pressure has been achieved, the tamper proof pin may be used to prevent further pressure adjustments.

Any strainer fitted upstream of the BRV2S, and the strainer screen fitted inside the valve should be cleaned regularly so that the flow to the valve is not restricted. Full Installation and Maintenance Instructions are supplied with each product. (IM-P045-10)

### BRV2SP/BRV2BP

When external pressure sensing is used, remove the blanking plug (19) and fit the 1/8"/6mm O/D compressing fitting (20-supplied). The other end of the 6mm sensing pipe should be connected into the downstream pipework at least 1m downstream from the valve. For more detail, see Installation and Maintenance Instructions.

### Spare Parts

The spare parts available are shown in heavy outline. Parts drawn in broken line are not supplied as spares.

#### AVAILABLE SPARES

Valve and seat assembly	F,M,L,J
* Bellows Assembly (Stainless Steel)	E,F
Option Phosphor Bronze/Brass	
* Spring Housing Hex bolts (set of 4)	G
* Pressure Adjustment Spring	D,Q
Grey 2-25 psig • Green 20-60 psig	
Orange 50-125 psig	
* Gasket set	F,M
* Common to all sizes.	

#### How to order

Always order spares by using the description given in the column headed Available Spare and stating the size, type and pressure range of the reducing valve.

Example: Pressure Adjustment Spring, pressure range 50-125 psig (orange) for 1/2" Spirax Sarco Type BRV2S Reducing Valve.

## Stainless Steel Direct Operated Pressure Regulator SRV2S

The SRV2S is a compact, stainless steel, direct acting pressure reducing valve for steam or gases such as compressed air. All wetted parts are constructed in 316L stainless steel.

<b>Model</b>	SRV2S
<b>Sizes</b>	1/2", 3/4", 1"
<b>Connections</b>	NPT
<b>Construction</b>	Stainless Steel
<b>Options</b>	Flanged ANSI 150. Ductile Iron Body Material see BRV2 TIS 3.107

### Typical Applications

Sterilizers, autoclaves, humidifiers, culinary steam supplies, and other equipment requiring reduced pressure to operate.

### Construction Materials

No.	Part	Material	Material Spec.
1	Spring Housing	Aluminum	LM6-Electroless Nickel Finish
2	Adjustment Hand Wheel	Plastic	Mineral Reinforced Nylon
3	Top Spring Plate	Cast Iron	DIN 1691 GG 20 Electroless Nickel Finish
4	Pressure Adjustment Spring	Silicone Chrome Spring Steel	BS 2803 685 A5 Range 2-Electroless Nickel Finish
5	Bellows Assembly	Stainless Steel	316Ti/316L
6	Bellows Assembly Gasket	Reinforced Exfoliated Graphite	
7	Hexagon Bolt	Stainless Steel	BS 6105 A 270

# Stainless Steel Direct Operated Pressure Regulator SRV2S

## Capacities – Saturated steam capacities in lb/h

Full lift capacities for safety valve sizing are shown below:

$C_v$ ( $K_v$ )	1/2" (DN15)	3/4" (DN20)	1" (DN25)
	1.8 (1.5)	2.9 (2.5)	3.5 (3.0)

## How to use the chart

The curved lines labelled 30, 45, 60, etc., represent upstream pressures. Downstream pressures are read along the vertical line on the left hand side of the chart.

**Example:** Required, a reducing valve to pass 160 lb/h reducing from 150 to 60 psi. From the downstream pressure of 60 on the left hand side of the chart extend out horizontally until the line meets the curved 150 psi upstream line. At this point, read vertically downward where it will be seen that 1/2" SRV2S will be required

## Installation and Maintenance

The valve should be installed in a horizontal pipeline with the direction of flow as indicated by the arrow on the valve body. When the required set pressure has been achieved, the tamper proof pin may be used to prevent further pressure adjustments. Any strainer fitted upstream of the SRV2S, and the strainer screen fitted inside the valve should be cleaned regularly so that the flow to the valve is not restricted. Full Installation and Maintenance Instructions are supplied with each product. (IM-P186-03)

## Sample Specifications

Pressure reducing valve shall be direct operated type with all 316L wetted parts. Reduced pressure shall be adjustable, by hand, and a tamper proof device included to prevent further adjustment.

## Spare Parts

### Spare Parts

Valve and seat assembly	F, R, L, M
* Bellows (Stainless Steel)	E, F
* Spring Housing Hex Bolts (set of 4)	G
* Pressure Adjustment Spring	D, Q
Grey 2/25 psig	
Green 20/60 psig	
Orange 50/125 psig	
* Set of all gaskets	F, M, S
* Common to all sizes.	

Only parts listed are available as spares. Always state valve size when ordering spare parts.

TI-3-108-US 03.14

## Direct Operated Pressure Regulator BRV71 & BRV73

The BRV71 ductile iron screwed, and the BRV73 ductile iron flanged body is a direct operated pressure regulator for steam applications.

<b>Model</b>	BRV71 & BRV73
<b>Sizes</b>	1", 1-1/4", 1-1/2", 2"
<b>Connections</b>	NPT/ANSI150
<b>Construction</b>	Ductile Iron
<b>Options</b>	BSP, PN16, JIS10

### Construction Materials

No.	Part	Material	Material Spec.
1	Body Assembly	SG Iron	DIN 1693 GGG40.3 ELNP coated
2	Pressure Adjustment Control Spring	Silicone Chrome	BS 2803 685 A55

## Capacities – Steam & compressed air capacity chart

Full lift capacities for safety valve sizing are shown below:

$C_v$ ( $K_v$ )	1" (DN25)	1-1/4" (DN32)	1-1/2" (DN40)	2" (DN50)
	10.7 (9.3)	12.8 (11.1)	18.1 (15.7)	18.7 (16.2)

## How to use the chart

The curved lines labelled 30, 45, 60, etc., represent upstream pressures. Downstream pressures are read along the vertical line on the left hand side of the chart.

### Example:

Required, a reducing valve to pass 400 lb/h reducing from 105 to 60 psi. From the downstream pressure of 60 psi on the left hand side of the chart extend out horizontally until the line meets the curved 105 psi upstream line. At this point, read vertically downward where it will be seen that a 1" BRV71/73 will be required.

## Installation and Maintenance

The valve should be installed in a horizontal pipeline with the direction of flow as indicated by the arrow on the valve body. Full Installation and Maintenance Instructions are supplied with this product. (IM-P210-04)

### How to order

Example: 1" Spirax Sarco BRV71 pressure reducing valve with ductile iron body, stainless steel bellows and fitted with Orange spring (50-130 psig)

## Spare Parts

The spare parts available are shown in heavy outline. Parts drawn in broken line are not supplied as spares.

### AVAILABLE SPARE

- \* Pressure Adjustment Spring K, Q  
Grey 2-25 psig • Green 20-60 psig  
Orange 50-125 psig
- \* Bellows Assembly (Stainless Steel) J  
Bellows pushrod assembly,  
(Sub Assembly, Head, "O" rings,  
Lower push rod and balancing bellows) E, C, H
- \* Bottom cap B
- \* Strainer screen G
- \* Return spring and gasket set F
- \* Hex. Head Screws - Spring housing (set of 4) L  
- Bottom cap (set of 4) A
- \* Return spring D
- \* Common to all sizes.

### How to order

Always order spares by using the description given in the column headed Available Spare and stating the size, type and pressure range of the reducing valve.  
Example: Pressure Adjustment Spring, pressure range 50-130 psig (orange) for 1" Spirax Sarco BRV71 Reducing Valve.

TI-3-109-US 4.16

## Stainless Steel Direct Operated Pressure Regulator SRV461/463

Types SRV461/463 Direct Acting Pressure Reducing Valve with non-rising adjustment screw, O-ring soft seal on valve plug for tight ANSI Class VI shutoff, and 316 Ti stainless steel construction for wetted parts.

Model	SRV461	SRV463
Sizes	1/2", 3/4", 1", 1-1/4", 1-1/2", 2"	
Plug Connections	NPT	ANSI 150
Construction	316 Ti Stainless Steel, EPDM Diaphragm, TFE O-ring Seal	
Options	BSP Connections	DIN PN16 or BS4504 flanges
	SRV461S and SRV463S for Hydrocarbon Service - Consult Factory	
	Non-Standard Pressure Ranges	

### Typical Applications

Clean steam, gas, and liquid supplies to bio-reactors, centrifuges, freeze dryers (lyophilizers), sterilizers, autoclaves, process tanks, production suites, humidifiers, and culinary equipment.

### Sample Specification

Stainless steel direct acting pressure reducing valves shall be diaphragm actuated with all 316Ti grade body and a soft O-ring seal for ANSI Class VI shutoff. Pressure setting on valves shall be adjustable while in service with maximum capacities rated for droop not to exceed 20%. Valve body shall be of packless design. Spirax Sarco SRV461 (screwed) SRV463 (flanged).

### Construction Materials

No.	Part	Material	Werkstoff No.	AISI Equivalent*
1	Body	Stainless Steel	1.4571	316 Ti
2	Spring Housing	Stainless Steel	1.4404	316L
3	Cap	Stainless Steel	1.4571	316 Ti
4	Valve Seat	Stainless Steel	1.4571	316 Ti
5	Valve Plug	Stainless Steel	1.4571	316 Ti
6	O-Ring Seal	TFE		
7	Diaphragm	EPDM		
8	Piston	Stainless Steel	1.4571	316 Ti
9	O-Ring	EPDM		
10	Top Spring Plate	Stainless Steel	1.4571	316 Ti
11	Spring	Stainless Steel	1.4310	301
12	Adjustment Screw	Stainless Steel	1.4571	316 Ti

\* not direct equivalents, nearest AISI specification is given.

\* flanged only

### Limiting Operating Conditions

Max. Operating Pressure (PMO)	174 psig (12 barg)	
Max. Operating Temperature	Steam service:	374°F (190°C)
	Liquid and gas service:	266°F (130°C) at all operating pressures

### Pressure Shell Design Conditions

PMA	220 psig/0-122°F	15 barg/0-50°C	PRESSURE RANGES	
Max. allowable pressure	187 psig/302°F	13 barg/150°C	4 - 16 psi	0.3 - 1.1 bar
	174 psig/374°F	12 barg/190°C	12 - 36 psi	0.8 - 2.5 bar
TMA			30 - 75 psi	2.0 - 5.0 bar
Max. allowable temperature	374°F/0-174 psig	190°C/0-12 barg		

### Capacities

Capacities can be calculated from the fully open capacity indices.

Size	Cv	Kv
1/2" DN15	4.7	4
3/4" DN20	5.9	5
1" DN25	7.0	6
1-1/4" DN32	14.0	12
1-1/2" DN40	18.7	16
2" DN50	21.1	18

### Sizing Notes

- Maximum capacities can be obtained only at the upper end of each pressure range. Therefore, to ensure quoted capacities always select lowest pressure range option compatible with required downstream pressure.
- Because of valve droop characteristics, it is recommended that only 80% of the "fully open capacity indices" be used for sizing.
- Required  $C_v$ 's can be calculated from the following formulae:

### For Steam:

Establish whether the flow is critical or non-critical, and calculate the required  $C_v$  using one of the following formula:

### For Liquids

$C_v = \text{GPM} \sqrt{\frac{\text{Sp. Gr.}}{\text{Pressure Drop, psi}}}$   
Where Sp. Gr. Water = 1  
GPM = Gallons per minute

### For Steam (Saturated)

a. Critical Flow  
When  $\Delta P$  is greater than  $F_L^2 (P_1/2)$   
 $C_v = \frac{W}{1.83 F_L P_1}$

### Where:

$P_1$  = Inlet Pressure psia  
 $P_2$  = Outlet Pressure psia  
 $W$  = Capacity lb/hr  
 $F_L$  = Pressure Recovery Factor (.9 on globe pattern valves for flow to open) (.85 on globe pattern valves for flow to close)

b. Noncritical Flow  
When  $\Delta P$  is less than  $FL^2 (P_1/2)$   
 $C_v = \frac{W}{2.1 \sqrt{\Delta P (P_1 + P_2)}}$

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

See Installation & Maintenance Instructions IMI 3.110 supplied with each valve.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation of the valve from supply is required before any servicing is performed.

The valve should be disassembled periodically for inspection and cleaning of the valve head and seat.

Worn or damaged parts should be replaced. Please refer to Spare Parts list for replacement parts. Complete installation and maintenance instructions are given in IMI 3.110 which accompanies the product.

Repair Kit – SRV461/463	1/2"-1" DN 15-25	A, B, C, D, E, F, G
Repair Kit – SRV461S/463S	1/2"-1" DN 15-25	A, B, C, D, E, F, G, H, I
Repair Kit – SRV461/463	1-1/4"-2" DN 32-50	A, B, C, D, E, F, G, J
Repair Kit – SRV461S/463S	1-1/4"-2" DN 32-50	A, B, C, D, E, F, G, H, I, J
Item J—Sizes	1-1/4" and larger only	

Standard spare parts are those shown numbered in the diagram. Additional spares may be available upon request. Always order spares by using the description in the first column, and by stating size, type, pressure range and valve seal type for the reducing valve.

TI-3-110-US 10.15

# Pilot Operated Pressure Regulator

## 1/2" to 4" 25P

The 25P is a self-actuated pilot-operated pressure regulator. Downstream pressure is fed back through an external sensing line to the pressure pilot, which adjusts the opening of the main valve so as to maintain the set pressure. The main valve can close tight for ANSI/FCI 70-2 Class IV shut off when steam is not required.

Model	25P			
Sizes	1/2" to 2"	2 1/2", 3", 4"	1/2" to 2"	2", 2 1/2", 3", 4"
Connections	NPT	ANSI 125 flgd.	NPT	ANSI 300 flgd.
Construction	Cast Iron		Cast Steel	
Options		ANSI 250 flgd.		ANSI 150 flgd. (excludes 2")

### Typical Applications

The 25P is a reliable, accurate regulator to reduce steam from a high supply pressure to the most efficient operating pressure of the equipment, and to protect the equipment from dangerously high pressures.

### Capacities

For selection and sizing data, see TIS 3.030.

### Cast Iron

■ The product should not be used in shaded area.

### Cast Steel

■ The product should not be used in shaded area.  
 ■ For operation in this region, stainless steel transmission tubing need be fitted.

Note: Maximum temperature for Stainless Steel tubing is 600°F

**Downstream Pressure Ranges**  
 For the following downstream pressures, three color-coded pilot valve springs are available:  
 Yellow: 3 to 30 psi  
 Blue: 20 to 100 psi  
 Red: 80 to 250 psi

Size	Dimensions (nominal) in inches and millimeters							Weight

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-3-015-US 4.12

# Pilot Operated Pressure Regulator

## 1/2" to 4" 25P

### Sample Specification

The pressure regulator shall be of the pilot-actuated diaphragm operated type. The main valve shall be single-seated with hardened stainless steel trim; the regulator body shall be cast iron (cast steel). The pilot shall be bolted directly to the regulator body. The regulator shall be capable of dead-end shut-off.

### Installation

The regulator should be installed in a horizontal line with suitable bypass and isolating valves. A steam trap should be installed upstream to prevent condensate from reaching the regulator. The trap and regulator should both be protected with a strainer. The pressure sensing line should be located in a straight section of the downstream piping at least 10 pipe diameters from the nearest fitting. Complete installation instructions are given in IM-3-000-US.

### Maintenance

Complete installation and maintenance instructions are given in IM-3-000-US, a copy of which is supplied with each regulator. Available spare parts are shown on TI-1-1120-US & TI-3-0271-US.

TI-3-015-US 4.12

# Pressure Regulator with Air Loaded Pilot 1/2" to 4" 25PA

The Pressure Pilot is loaded by an external compressed air supply rather than by a spring. The downstream pressure can be set remotely by adjusting the loading air pressure.

28	Body Gasket	1/2" - 2" Copper Clad	
		2** - 4" Graphite	

### Installation

The valve should be installed in a horizontal line with suitable bypass and isolating valves. A steam trap should be installed upstream to prevent condensate from reaching the valve. The trap and regulator should both be protected with a strainer. The pressure sensing line should be located either in the downstream piping, or in the steam space. Complete installation instructions are given in IM-3-000-US.

### Air Loading Pilot PA Requires Air Loading as indicated in the following table

Desired Outlet Steam Pressure P2 psig	5	10	25	50	75	100
Inlet Pressure P1 psig	10 psig to 100 psig					
Approximate Air Set Pressure psig	11 to 13.5	16 to 16.8	31 to 33.5	56 to 58	80 to 81	102 to 103

### Maintenance

Complete installation and maintenance instructions are given in IM-3-000-US, a copy of which is supplied with each valve. Available spare parts are shown on TI-1-1120-US and TI-3-0271-US.

## Pilot Operated Pressure Regulator w/ Electric Override 1/2" to 4" 25PE

The 25PE has all of the features of the 25P, with the addition of an electric pilot. An electrical signal can override the pressure pilot to provide a remote shut-off capability.

\*Note: For pressures below 15 psig, the E pilot is not recommended for use with valves 2½" and larger.

Model	25PE			
Sizes	½" to 2"	2½", 3", 4"	½" to 2"	2", 2½", 3", 4"
Connections	NPT	ANSI 125 flgd.	NPT	ANSI 300 flgd.
Construction	Cast Iron		Cast Steel	
Options		ANSI 250 flgd.		ANSI 150 flgd. (excludes 2")
Electric Pilot Specifications	Enclosure: NEMA 4 & 7 (C&D) 115v (230v)/60Hz Inrush: 45 VA Normally closed 200 psig Max. operating pressure			
Electric Pilot Options	For regulators 2½" and larger at pressures below 125 psig, use the following electric pilot: Enclosure: NEMA 4 & 7 (C&D) 115v (230v)/60Hz Inrush: 45 VA Normally closed 140 psig Max. operating pressure (for faster response time) 230 Volt Coil			

### Typical Applications

Steam pressure reducing applications where the PRV must also respond to an electrical program timer, safety or limit switch, or remote manual switch.

### Sample Specification

The pressure regulator shall be of the pilot-actuated diaphragm operated type. The main valve shall be single-seated with hardened stainless steel trim; the regulator body shall be cast iron (cast steel). The pilot shall be bolted directly to the regulator body. The main valve shall be capable of dead-end shut-off. The electric pilot shall have a NEMA 4 & 7 (C & D) enclosure with 115v (230v) 60 Hz coil.

### Limiting Operating Conditions

**Max. Operating Pressure (PMO)** NPT: 200 psig (14 barg) @ 392°F (200°C)  
ANSI 125: 125 psig (8 barg) @ 392°F (200°C)  
ANSI 250: 200 psig (14 barg) @ 392°F (200°C)  
ANSI 150: 185 psig (12 barg) @ 392°F (200°C)  
ANSI 300: 200 psig (14 barg) @ 392°F (200°C)

**Max. Operating Temperature** 392°F (200°C)

### Downstream Pressure Ranges

For the following downstream pressures, three color-coded pilot valve springs are available:

Yellow: 3 to 30 psi Blue: 20 to 100 psi Red: 80 to 250 psi

### Pressure Shell Design Conditions

**PMA** Cast Iron: 250 psig/0-450°F 17 barg/0-232°C  
Max. allowable pressure Cast Steel: 300 psig/0-600°F 21 barg/0-316°C

**TMA** Cast Iron: 450°F/0-250 psig 232°C/0-17 barg  
Max. allowable temperature Cast Steel: 600°F/0-300 psig/316°C/0-21 barg

### Capacities

For selection & sizing data, see TI-3-030-US.

### Installation

The regulator should be installed in a horizontal line with suitable bypass and isolating valves. A steam trap should be installed upstream to prevent condensate from reaching the regulator. The trap and regulator should both be protected with a strainer. The pressure sensing line should be located in a straight section of the downstream piping at least 10 pipe diameters from the nearest fitting. Complete installation instructions are given in IM-3-000-US.

### Maintenance

Complete installation and maintenance instructions are given in IM-3-000-US, a copy of which is supplied with each regulator. Available spare parts are shown on TI-3-0271-US and TI-1-1120-US.

Capacities are based on an accuracy regulation of 1 PSI and with pipe sizes to insure reasonable velocities. Refer to pipe sizing chart.

\* Cast steel construction required for service above 250 psig

## Pilot Operated Back Pressure Regulator 1/2" to 4" 25BP

The 25BP Back Pressure Regulator maintains a constant upstream pressure in a piping system. The reverse-acting pressure pilot opens the main valve when the sensed upstream pressure increases. The 25BP is NOT a safety valve, and should NEVER be used as such.

Model	25BP			
Sizes	1/2" to 2"	2 1/2", 3", 4"	1/2" to 2"	2", 2 1/2", 3", 4"
Connections	NPT	ANSI 125 flgd.	NPT	ANSI 300 flgd.
Construction	Cast Iron		Cast Steel	
Options		ANSI 250 flgd.		ANSI 150 flgd. (excludes 2")

### Typical Applications

The modulated release of surplus steam ensures that the set maximum pressure in the steam space or upstream piping will not be exceeded. Flash steam recovery systems to release excess flash steam limits the flash tank pressure. For elimination of non-critical loads, see TI-3-031-US.

### Limiting Operating Conditions

**Max. Operating Pressure (PMO)**  
 NPT: 250 psig (17 barg) @ 450°F (232°C)  
 ANSI 125: 125 psig (8 barg) @ 450°F (232°C)  
 ANSI 250: 250 psig (17 barg) @ 450°F (232°C)  
 ANSI 150: 185 psig (12 barg) @ 450°F (232°C)  
 ANSI 300: 300 psig (20 barg) @ 450°F (232°C)

**Max. Operating Temperature**  
 450°F (232°C)

### Upstream Pressure Ranges

For the following upstream pressures, three color-coded pilot valve springs are available:

Yellow: 3 to 30 psi    Blue: 20 to 100 psi    Red: 80 to 250 psi

### Pressure Shell Design Conditions

**PMA**  
 Cast Iron: 250 psig/0-450°F 17 barg/0-232°C  
 Max. allowable pressure    Cast Steel: 300 psig/0-600°F 21 barg/0-316°C

**TMA**  
 Cast Iron: 450°F/0-250 psig 232°C/0-17 barg  
 Max. allowable temperature    Cast Steel: 600°F/0-300 psig 316°C/0-21 barg

### Sample Specification

The back pressure regulator shall be of the pilot-actuated, diaphragm-operated type. The main valve shall be single seated with hardened stainless steel trim; the valve body shall be cast iron (cast steel). The pilot shall be bolted directly to the valve body.

**Capacities:**  
 For selection and sizing data, see TI-3-031-US.

### Installation

The regulator should be installed in a horizontal line with suitable bypass and isolating valves. A steam trap should be installed upstream to prevent condensate from reaching the regulator. The trap and regulator should both be protected with a strainer. The pressure sensing line should be located either in the upstream piping, or in the steam space. Complete installation instructions are given in IM-3-023-US.

### Maintenance

Complete installation and maintenance instructions are given in IM-3-023-US, a copy of which is supplied with each regulator. Available spare parts are shown on TI-1-1120-US and TI-3-0271-US.

© Spirax Sarco, Inc. 2012

TI-3-023-US 4.12

## Sizing and Selection Chart 25BP

The data required to size the valve are identical to those required for a pressure reducing valve, i.e. upstream pressure, downstream pressure and capacity. Valve sizing depends upon the application.

### As a flash steam surplussing valve

1. To size a Spirax Sarco 25BP Back Pressure Regulator properly, determine the maximum probable pounds of flash steam that will be generated within the flash tank.

The amount of flash can be calculated from the table overleaf. To this add approximately 20% as a safety factor for errors in calculating the load and/or possible future growth.

2. Determine the minimum amount of low pressure steam that will be used. If at times there is no demand for low pressure steam, then the back pressure regulator must be sized for the total amount of flash steam generated in the tank plus 20% safety factor. Where there is a definite minimum amount of low pressure steam used at all times, this amount of flash steam should be subtracted from the total flash steam generated and the regulator sized for the surplus amount.

**Example:** Suppose the high pressure system is operating at 125 psi, the amount of steam used at this pressure is 10,000#/hr and it is desired to keep the flash tank at 5 psi. Under these conditions, 13.4% of the 10,000#/hr (1340#/hr of flash steam) will be generated in the flash tank. If there is no demand for the low pressure steam at times, then the regulator must be sized for the 1340#/hr plus 20% or approximately 1600#.hr. If there is a constant demand for 500#/hr of low pressure steam at 5 psi, then the regulator should be sized to vent the difference between 1600 and 500 or 1100#/hr.

### Eliminating non-critical loads

For this application, a 25BP valve must be sized for the minimum allowable pressure drop to insure that the valve is normally fully open. Select valve size with load capacity at the minimum pressure drop on the 25P capacity table given in TIS 3.030.

A combination P-BP regulator must be sized using the inlet and reduced pressure the same as for a 25P pressure reducing valve. For a combination T-BP regulator size the same as a 25T temperature control.

### Surplussing Valve Capacities pounds of saturated steam per hour to atmosphere

*Note: Table is for trap discharge at saturated steam temperature. Subcooled discharge traps release less flash. Load should be increased by 20% to allow for trap leakage, future growth, etc.*

## Stainless Steel Pilot Operated Pressure Regulator DP 163

The DP163 is a self-powered, pilot-operated pressure reducing valve constructed entirely of stainless steel with 316L SS body. Downstream pressure is sensed either internally or through an external sensing pipe.

<b>Model</b>	<b>DP163</b>
<b>Sizes</b>	1/2" to 3"
<b>Connections</b>	ANSI 300
<b>Construction</b>	316 Stainless Steel Body Stainless Steel Internals
<b>Options</b>	BS or DIN Flanges, ANSI 150 flanges

### Typical Applications

Sterilizers, autoclaves, humidifiers, large and small scale bioprocessing equipment, culinary steam supplies and production suites, and other steam equipment which requires a reduced steam pressure to operate.

### Limiting Operating Conditions

**Max. Operating Pressure (PMO)** 304 psig (21 barg)

**Max. Operating Temperature** 432°F (250°C)

### Downstream Pressure Ranges

For the following downstream pressures, two color-coded pilot valve springs are available:

<b>Red:</b> 3 to 250 psi 0.2 to 17 bar	<b>Grey:</b> 230 to 304 psi 16 to 21 bar
---	---

### Pressure Shell Design Conditions

<b>PMA</b>	580 psig/0-248°F	40 barg/0-120°C
Max. allowable pressure	472 psig/464°F	32 barg/240°C
	304 psig/752°F	21 barg/400°C

<b>TMA</b>	752°F/0-304 psig	400°C/0-21 barg
Max. allowable temperature		

### Capacities

See TIS 3.081

### Sample Specification

Self-contained reducing valves shall be pilot-actuated diaphragm operated type DP163. Valve shall be packless design, single-seated globe type suitable for dead-end shut off. Valve stem shall be top and bottom guided. Pilot to be top mounted with set pressure adjustment via a spring. Main valve body to be constructed of 316L stainless steel. All internal components to be made of stainless steel.

## Installation

The DP163 controls by sensing the downstream pressure through a pressure sensing pipe taken from the union (29) or through the internal pressure sensing pipe (19) provided. Complete installation instructions are given in IM-P006-07, which accompanies the product.

Note: Capacity will be reduced if an external sensing pipe is not fitted.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation of the valve is required before any servicing is performed. The valve should be disassembled periodically for cleaning of the strainer screen and inspection and cleaning of both the valve head and seat, and the pilot head and seat. Worn or damaged parts should be replaced. Please refer to Spare Parts list (TIS 3.082) for replacement parts. Complete installation and maintenance instructions are available upon request.

	0-160	665	1420	2940	4700	7180	10760	17200	37900

Capacities are based on an accuracy of regulation of 1-1/2 psi and with pipe sizes to ensure reasonable steam velocities. Refer to pipe sizing chart.

**Note: The capacities quoted on the chart are based on valves fitted with external pressure sensing pipes. Reliance on the internal pressure sensing pipe will mean that capacities may be reduced. In the case of low downstream pressure, this reduction could be up to 30% of the valve capacity**

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-3-081-US 03.94

# Capacities for the Stainless Steel Pilot Operated Pressure Regulator DP 163

## Steam Capacities (metric Units)

### How to use the chart

#### Saturated Steam

Required a valve to pass 600 kg/h reducing from 6 bar to 4 bar. Find point at which curved 6 bar upstream pressure line crosses horizontal 4 bar downstream pressure line. A perpendicular dropped from this point gives the capacities of all DP sizes under these conditions. A DN 32 valve is the smallest size which will carry the required load.

#### Superheated Steam

Because of the higher specific volume of superheated steam, a correction factor must be applied to the figure obtained from this chart. For 55°C of superheat, the factor is 0.95, and for 100°C of superheat, it is 0.9. Using the example given for saturated steam, the DN 32 valve would pass  $740 \times 0.95 = 703$  kg/h if the steam had 55°C of superheat. It is still big enough to pass the required load of 600 kg/h.

1-1/2" & 2" - DN 40 & 50	set of 16	
3" - DN 80	set of 20	
Set of Main Body Studs & Nuts 3" DN 80		(set of 6) T

## Interchangeability of Spares

The following table shows how some parts are interchangeable. For example, the line headed main diaphragm indicates that the diaphragm used in sizes 1/2" LC, 1/2" & 3/4" DN 15 LC, DN 15 and DN 20, is common to those sizes by the letter 'a'. The letter 'b' indicates that sizes 1" and 1-1/4" DN 25 and DN 32, use a common diaphragm.

	Valve Size DN							
	1/2" LC	1/2"	3/4"	1"	1-1/4"	1-1/2"	2"	3"

## Pilot Operated Temperature Regulators 1/2" to 4" 25T

The 25T is a self actuated pilot-operated temperature regulating valve. The temperature pilot has a calibrated dial for accurate temperature setting, and is available with a variety of solid-fill sensing bulbs (see TI-1-1123-US). The standard capillary tubing length is 8 feet, with an optional standard length of 15 feet.

Model	25T			
Sizes	1/2" to 2"	2 1/2", 3", 4"	1/2" to 2"	2", 2 1/2", 3", 4"
Connections	NPT	ANSI 125 flgd.	NPT	ANSI 300 flgd.
Construction	Cast Iron		Cast Steel	
Options		ANSI 250 flgd.		ANSI 150 flgd. (excludes 2")
Non-Standard capillary tubing length (see TIS 1.1123) in 5 ft. intervals to a maximum of 50 ft.				

### Typical Applications

Storage steam water heaters, instantaneous heat exchangers and converters, air handling coils, tank heating coils, steam jacketed vessels, steam chests, molds and platens.

### Capacities

For selection and sizing data, see TI-1-1124-US.

### Limiting Operating Conditions

Max. Operating Pressure (PMO)	NPT:	250 psig (17 barg) @ 450°F (232°C)
	ANSI 125:	125 psig (8 barg) @ 450°F (232°C)

Max. allowable temperature	Cast Steel: 450°F/0-300 psig	232°C/0-17 barg

### Sample Specification

Temperature Regulators shall be of the pilot-actuated, diaphragm-operated type. The main valve shall be single-seated, with hardened stainless steel trim; the valve body shall be cast iron (cast steel). The pilot shall be bolted directly to the valve body and shall be removable without disturbing the control connections. The temperature setting shall be adjustable without the use of tools, and the set point shall be indicated on a calibrated dial. The thermostatic system shall be solid fill, and shall incorporate overheat protection.

### Installation

The regulator should be installed in a horizontal line with suitable bypass and isolating valves. A steam trap should be installed upstream to prevent condensate from reaching the valve. The trap and regulator should both be protected with a strainer. The thermostatic bulb must be carefully located in the medium being heated. Complete installation instructions are given in IM-1-1116-US.

### Maintenance

Complete installation and maintenance instructions are given in IM-1-1116-US, a copy of which is supplied with each valve. Available spare parts are shown on TI-1-1120-US and TI-3-0271-US.

TI-1-1116-US 4.12

# Pilot Operated Temperature Regulator w/ Electric Override

## 1/2" to 4" 25TE

The 25TE has all of the features of the 25T, with the addition of an electric pilot. An electrical signal can override the temperature pilot to provide a remote shut-off capability.

Note: For pressures below 15 psig, the E pilot is not recommended for use with valves 2-1/2" and larger.

Model	25TE			
Sizes	1/2" to 2"	2-1/2", 3", 4"	1/2" to 2"	2", 2-1/2", 3", 4"
Connections	NPT	ANSI 125	NPT	ANSI 300
Construction	Cast Iron		Cast Steel	
Options		ANSI 250		ANSI 150 (excludes 2")
	Non-Standard Capillary tubing length in 5 ft. increments to a maximum of 50 ft. (see TIS 1.1123)			
Electric Pilot Specifications	Enclosure: NEMA 4 & 7 (C&D) 115v/60Hz; Holding: 23 VA Inrush: 45VA; Normally closed 200 psig Max. operating pressure			
Electric Pilot Options	140 psig Max. operating pressure (for faster response time) 230 volt coil			

### Capacities

The valve is sized according to the temperature control requirements.

For selection & sizing data, see TIS 1.1114

### Sample Specification

The pressure reducing valves shall be of the pilot-actuated diaphragm operated type with electric override. The main valve shall be single-seated with hardened stainless steel trim; the valve body shall be cast iron (cast steel). The pilots shall be bolted directly to the valve body and shall be removable without disturbing the control connections. The temperature setting shall be adjustable without the use of tools, and the set point shall be indicated on a calibrated dial. The thermostatic system shall be solid-fill, and shall incorporate over heat protection. The electric pilot shall have a NEMA 4 & 7 (C & D) enclosure with 115v (230v) 60 Hz coil.

### Limiting Operating Conditions

<b>Max. Operating Pressure (PMO)</b>	NPT: 200 psig (14 barg) @ 392°F (200°C)
	ANSI 125: 125 psig (8 barg) @ 392°F (200°C)

## Electric Pilot Operated On/Off Regulator 1/2" to 4" 25E

The 25E is controlled by an electric pilot valve. The main valve opens wide when the pilot is energized; it closes tight when the pilot is de-energized. The 25E does not modulate or throttle steam at part load.

**Note:** For pressures below 15 psig, the E pilot is not recommended for use with valves 2-1/2" and larger.

Model	25E

<b>Electric Pilot Options</b>	140 psig Max. operating pressure (for faster response time) 230 volt coil			

### Typical Applications

On/Off control of steam flow in response to remote manual or automatic electrical signals which may originate at safety switches, timers, manual switches, etc.

### Sample Specification

The On/Off operation of the main valve shall be controlled by an electrical solenoid pilot which is bolted directly to the main valve and may be removed without disturbing the control tubing connections. The main valve shall be single seated with hardened stainless steel trim. The valve body shall be cast iron (cast steel). The electric pilot shall have a NEMA 4&7 (C&D) enclosure with 115v (230v) 60 Hz coil.

## Pilot Operated Temperature Regulators 25 Series Thermostat Bulb Types

The Thermostat Bulb styles are for temperature pilots used on the following:  
25T & 25TE Temperature Controls  
25PT & 25 PTE Pressure Temperature Controls.

### Thermostat Bulb Types

- T1 Bulb in copper with brass capillary tubing.
- T2 Bulb in copper with union connection 3/4" NPT, with brass capillary tubing.
- T4 T1 flanged temperature pilot well.
- T5 Brass, 5 3/4" extension well for T2 thermostat bulb.
- T6 Stainless steel, 5 3/4" extension well for T2 thermostat bulb.
- T7 Brass, 18" extension well for T1 thermostat bulb.
- T8 Stainless steel, 18" extension well for T1 thermostat bulb.
- T9 Wall mounting bracket for T1 thermostat bulb.
- T10 Bulb in stainless steel, with stainless steel capillary tubing.
- T11 Bulb in stainless steel with union connection 3/4" NPT, with stainless steel capillary tubing.

### Limiting Operating Conditions

Up to 200°F / 93°C above the control set point  
provided temperatures at the bulb do not exceed  
350°F 176°C.

### Options:

#### Capillary Tube Length

Standard 8 ft. and 15 ft. available. Intervals of 5 ft. up to a maximum of 50 ft.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

### Installation

The thermostatic bulb should be carefully located in the medium being heated. Make sure that the entire length of the thermostatic bulb is immersed in the heated medium with a good circulation left over it. Locate the thermometer being used to monitor temperature close to the thermostatic bulb. When the bulb is contained in a well, use a heat conducting compound to improve response time.

### How to Specify

1 - 1/2" Spirax Sarco 25T Temperature Control with Thermostat Bulb Style T2.

\*bulb/pilot not included.

## Combination Pressure/Temperature Regulator 1/2" to 4" 25PT

The 25PT eliminates the need for a separate pressure regulator and a temperature regulator. Normal operation is controlled by the temperature pilot, and the pressure pilot sets an upper limit on the downstream steam pressure. The temperature pilot has a calibrated dial for accurate temperature setting, and is available with a variety of solid-fill sensing bulbs (See TIS 1.1123). The standard capillary tubing length is 8 feet, with an optional standard length of 15 feet.

Model	25PT			
Sizes	1/2" to 2"	2-1/2", 3", 4"	1/2" to 2"	2", 2-1/2", 3", 4"
Connections	NPT	ANSI 125 flgd.	NPT	ANSI 300 flgd.
Construction	Cast Iron		Cast Steel	
Options	ANSI 250 flgd.		ANSI 150 flgd. (excludes 2")	
	Non-Standard capillary tubing length (see TIS 1.1123)			

### Typical Applications

Storage steam water heaters, instantaneous heat exchangers and converters, air handling coils, tank heating coils, steam jacketed vessels, steam chests, molds and platens, and other temperature control applications where it is necessary or desirable to set an upper limit on the delivered steam pressure.

### Capacities

The regulator is sized according to the temperature control requirements. For selection and sizing, see TI-1-1124-US.

### Limiting Operating Conditions

**Max. Operating Pressure (PMO)** NPT: 250 psig (17 barg) @ 450°F (232°C)  
 Cast Iron: 125 psig (8 barg) @ 450°F (232°C)  
 ANSI 250: 250 psig (17 barg) @ 450°F (232°C)  
 ANSI 150: 185 psig (12 barg) @ 450°F (232°C)  
 ANSI 300: 300 psig (20 barg) @ 450°F (232°C)

**Max. Operating Temperature** 450°F (232°C)

\*The temperature of the sensing bulb must not exceed 350°F (177°C)

### Standard Temperature Ranges

30°F to 90°F    0°C to 32°C  
 60°F to 120°F    15°C to 50°C    160°F to 220°F    70°C to 105°C  
 100°F to 160°F    40°C to 70°C    200°F to 260°F    95°C to 125°C  
 120°F to 180°F    50°C to 80°C    260°F to 320°F    125°C to 160°C

### Downstream Pressure Ranges

For the following downstream pressures, three color-coded pilot valve springs are available:

Yellow: 3 to 30 psi    Blue: 20 to 100 psi    Red: 80 to 290 psi

### Pressure Shell Design Conditions

**PMA** Cast Iron: 250 psig/0-450°F    17 barg/0-232°C  
 Max. allowable pressure Cast Steel: 600°F/0-300 psig    316°C/0-21 barg

**TMA** Cast Iron: 450°F/0-250 psig    232°C/0-17 barg  
 Max. allowable temperature

### Sample Specification

Pressure/Temperature Regulators shall be of the pilot-actuated, diaphragm-operated type with separate pressure and temperature pilots. The main valve shall be single-seated, with hardened stainless steel trim; the regulator shall be cast iron (cast steel). The pilots shall be removable without disturbing the control connections. The temperature setting shall be adjustable without the use of tools, and the set point shall be indicated on a calibrated dial. The thermostatic system shall be solid fill, and shall incorporate overheat protection. The regulator shall be capable of dead-end shut-off.

### Installation

The regulator should be installed in a horizontal line with suitable bypass and isolating valves. A steam trap should be installed upstream to prevent condensate from reaching the regulator. The trap and regulator should both be protected with a strainer. The thermo-static bulb must be carefully located in the medium being heated. The pressure sensing line may be located either in the downstream piping or in the steam space. Complete installation instructions are given in IM-3-000-US.

### Maintenance

Complete installation and maintenance instructions are given in IM-3-000-US, a copy of which is supplied with each regulator. Available spare parts are shown on TI-1-1120-US and TI-3-0271-US. TI-3-017-US 4.12

# Combination Pressure/Temperature Regulator w/ Electric Override

## 1/2" to 4" 25PTE

The 25PTE has all of the features of the 25PT pressure/temperature regulator, with the addition of an electric pilot which permits an electrical signal to override the temperature and pressure pilots to provide a remote shut-off capability.

\*Note: For pressures below 15 psig, the E pilot is not recommended for use with valves 2-1/2" and larger.

Model	25PTE			
<b>Sizes</b>	1/2" to 2"	2-1/2", 3", 4"	1/2" to 2"	2", 2-1/2", 3", 4"
<b>Connections</b>	NPT	ANSI 125 flgd.	NPT	ANSI 300 flgd.
<b>Construction</b>	Cast Iron		Cast Steel	
<b>Options</b>		ANSI 250 flgd.		ANSI 150 flgd. (excludes 2")
<b>Electric Pilot Specifications</b>	Non-Standard capillary tubing length (see TIS 1.1123)			
	Enclosure: NEMA 4 & 7 (C&D) 115v (230v)/60Hz Inrush: 45 VA Normally closed 200 psig Max. operating pressure			
<b>Electric Pilot Options</b>	For regulators 2-1/2" and larger at pressures below 125 psig, use the following electric pilot: Enclosure: NEMA 4 & 7 (C&D) 115v (230v)/60Hz Inrush: 45 VA Normally closed 140 psig Max Operating Pressure			

### Typical Applications

Pressure/Temperature control applications where the regulator must also respond to an electrical program timer, safety or limit switch, or remote manual switch.

### Sample Specification

Pressure/Temperature Regulators shall be of the pilot-actuated, diaphragm-operated type with separate pressure and temperature pilots and electrical override. The main valve shall be single-seated, with hardened stainless steel trim; the regulator body shall be cast iron (cast steel). The pilots shall be removable without disturbing the control connections. The temperature setting shall be adjustable without the use of tools, and the set point shall be indicated on a calibrated dial. The thermostatic system shall be solid fill, and shall incorporate overheat protection. The regulator shall be capable of dead-end shut-off. The electric pilot shall have a NEMA 4 & 7 (C&D) enclosure with 115v (230v) 60 Hz coil.

### Limiting Operating Conditions

<b>Max. Operating Pressure (PMO)</b>	NPT:	200 psig (14 barg) @ 392°F (200°C)
	ANSI 125:	125 psig (8 barg) @ 392°F (200°C)
	ANSI 250:	200 psig (17 barg) @ 392°F (200°C)
	ANSI 150:	185 psig (12 barg) @ 392°F (200°C)
	ANSI 300:	200 psig (14 barg) @ 392°F (200°C)

**Max. Operating Temperature** 392°F (200°C)

\*The temperature of the sensing bulb must not exceed 350°F (177°C)

### Standard Temperature Ranges

30°F to 90°F	0°C to 32°C		
60°F to 120°F	15°C to 50°C	160°F to 220°F	70°C to 105°C

## Sizing and Selection Chart

### 25T, 25TE, 25E, 25PT, 25PTE

#### How to Select and Size

**25T and 25TE Temperature Controls**  
**25E Electric On/Off Valve**  
**25PT and 25PTE Pressure/Temperature Controls**

Select the pilot or pilots best suited to the application, then determine the regulator size required to meet the steam capacity load. Satisfactory temperature control and low control maintenance depend on sizing each regulator correctly for its intended application.

Too large a regulator may tend to hunt or it may operate for long periods with the main valve just barely cracked open. Wire drawing – the erosive scouring of high-velocity steam – can subject an oversized valve seat to premature wear.

Too small a regulator will not meet peak heating load requirements. It will increase the time a system requires for coming up to temperature during start-up.

Size of the regulator should be determined by actual steam capacity requirements, not by pipe sizes in the system. For most applications, regulator size will be smaller than the sizes of connected piping.

#### Determining Steam Capacity

##### For heating water with steam:

$$\text{lbs. of steam/h} = \frac{\text{GPM}}{2} \times \text{temp rise } ^\circ\text{F} \times 1.1$$

##### For heating fuel oil with steam:

$$\text{lbs. of steam/h} = \frac{\text{GPM}}{4} \times \text{temp rise } ^\circ\text{F} \times 1.1$$

##### For heating air with steam coils:

$$\text{lbs. of steam/h} = \frac{\text{CFM}}{800} \times \text{temp rise } ^\circ\text{F}$$

##### For radiation:

$$\text{lbs. of steam/h} = \frac{\text{sq. ft. EDR}}{4}$$

#### How to Size Valve

Proper regulator sizing requires the following information:

- 1) The steam capacity required for the application in pounds per hour.
- 2) Inlet supply pressure of the steam taken immediately ahead of the regulator.
- 3) Outlet steam pressure from the allowable pressure drop across the regulator.

**Where it is impossible to calculate the pressure drop, 35% to 40% of the gage supply pressure can be used as a reasonable approximation. Noise level increases with the pressure drop. Install regulator with properly sized piping.**

#### Example

Determine what size Spirax Sarco 25T Temperature Regulator will be required for an instantaneous water heater heating 20 GPM of water from 60° to 160°F. Steam supply pressure at the heater is 75 psig. Permissible drop across the regulator is 20 psi.

Solution: Using formula for heating water:

$$\begin{aligned} \text{lbs. of steam/hr.} &= \frac{\text{GPM}}{2} \times \text{temp rise } ^\circ\text{F} \times 1.1 \\ &= \frac{20}{2} \times 100 \times 1.1 \\ &= 1,100 \text{ lbs/h} \end{aligned}$$

From the capacity chart overleaf, look in the first column for 75 psig inlet pressure. In second column, find 55 psig downstream pressure (75 psig inlet less 20 psi permissible drop). Follow a horizontal line to the sixth column where we find that a 1" regulator is required to supply no less than 1,100 pounds per hour.

† Specify low pressure main valve and low pressure "T" pilot for 2-1/2", 3" & 4" at inlet pressures of 15 psig and below. Not available in cast steel.

6" size not recommended below 15 psig. "E" pilot is not recommended for use with 2-1/2", 3" & 4" valves at pressures below 15 psig.

\* Cast steel construction required for service above 250 psig.

TI-1-1124 -US 04.15

## Spare Parts Guide 1/2" to 2" Main Valves

### Spare Parts – Main Valve

Cap Assembly w/ Cap Screws & Gasket	A,B,C
Diaphragm Case Bolts & Nuts	G,H
Screen, Spring Support Disc Valve Spring and Cap Gasket	M,N,O,C
Cap Gasket, Valve Head, Seat & Seat Gasket (specify regular or reduced port "S" valve)	C,P,Q,R
Valve Stem Guide & Gasket	J,S,T
Diaphragm (2 per set)	L
Transmission Tubing w/ Fittings	U,V
Gasket Kit	C,R,S,W
Diaphragm Plate	K
Rebuild Kit	BCLMOPQRUVW

### How to Order

Always order spares by using the description given in the column headed Spare Parts, stating the valve size and material.

Example 1 – Cap Assembly for 1/2" Spirax Sarco 25T Cast Iron Temperature Regulator.

### Maintenance

For complete installation & maintenance instructions, see the IMI sheet, which accompanies the product.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

# Spare Parts Guide

## 2-1/2" to 4" Main Valves

### Spare Parts – Main Valve

Cap Assembly w/ Cap Screws & Gasket	A,B,C
Diaphragm Case Bolts & Nuts	G,H
Screen, Retaining Ring	M,N,O,C
Main Valve Spring & Cap Gasket	
Cap Gasket, Valve Head & Seat	C,P,Q,X
(specify regular or reduced port "S" valve)	
Lower Stem & Guide	J,S,T
Diaphragms (2 per set)	L
Transmission Tubing w/ Assembly	U
Gasket Kit	C,S,W
Damping Assembly	A1,B1,C1
Diaphragm Plate	K
Rebuild Kit	BCLMNOPQUW
Relief Tube	D1

### How to Order

Always order spares by using the description given in the first column under Spare Parts, stating the valve size and material.

Example: 1 – Cap Assembly for 2-1/2" Spirax Sarco 25T Cast Iron Temperature Regulator

### Maintenance

See installation and maintenance instructions supplied with each valve, copies are available on request.

## Spare Parts Guide 6" Main Valves

### SPARE PARTS – MAIN VALVE

Main Valve Spring & Lower Diaphragm Cover Gaskets	O, S
Diaphragm Plate & Set Screws	K, D
Transmission Tubing with Fittings	U
Diaphragms (2 per set)	L
Gasket Kit	C, S, W
Head, Stem & Seat Assembly (specify regular or reduced part "S" valve)	P, Q, C
Screen Assembly	I, J
Cover Bolt Kit	B
Diaphragm Case Bolt Kit	G, H
Rebuild Kit	BCLOPQSUW
Pilot Platform:	X

### HOW TO ORDER

Always order spares by using the description given in the first column under Spare Parts, stating the valve size and material.

Example: 1 – Diaphragm Plate & Set Screws for 6" Spirax Sarco 25T Cast Iron Reducing Valve

### MAINTENANCE

See installation and maintenance instructions supplied with each valve, copies are available on request.

Main valve seat in 6" regulator is field replaceable.

Please consult factory for seat removal tool. To retain tight shut off, minor wear can be corrected by lapping with suitable grinding compound.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

## 25 Series Spare Parts Guide 1/2" to 6" Pilots

### Spare Parts – Pressure Pilot, P & BP

Cover Plate w/ Retaining Ring	A4, B4
Pilot Screws w/ Gasket	B, W
Adjustment Screw w/ Nut, and Upper and Lower Spring Support Discs	G4, H4 J4
Adjustment Spring	K4
Specify controlled pressure and spring color	
Yellow	3 to 30 psi
Blue	20 to 100 psi
Red	80 to 250 psi
Diaphragm (2)	L4
Stem Guide w/ Gasket (25P, 25PA)	M4, N4
Stem Guide and Seal Gasket (25BP)	P4, Q4
Head & Seat Assembly w/ Gasket (25P, 25PA & 25MP)	S4, T4
Head & Seat Assembly (25BP)	U4, V4
Square Gasket for all Pilots (set of 3)	W
Pilot Kit	L4, M4, N4, S4, T4, W

### Spare Parts – Temperature Pilot see TI-1-1123-US

Thermal System (T1, T2, T3, T10, T11)	A2
State bulb style, capillary tube length & temperature range	
Well (T5, T6, T7, T8, T4)	B2
State bulb style	
Wall Mounting Bracket (T9)	
State bulb style	C2
Complete Pilot Body Assembly	D2, W
Head & Seat Assembly	E2, W
(Specify 15 psig or below Assembly or Standard)	

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-3-0271-US 3.14

# 25 Series Spare Parts Guide

## 1/2" to 6" Pilots

### Spare Parts – Electric Pilot

NEMA 4 & 7 Solenoid	C3
specify voltage and steam pressure	
Complete "E" Pilot Body Assembly	B3, W

### Spare Parts – PA (air loaded) Pilot

Pilot Mounting Screws	F2
Lower Diaphragm (2)	L4
Upper Diaphragm for PA4	L5
Upper Diaphragm for PA6	L5
Stem Guide w/ Gasket	M4, N4
Head & Seat Assembly w/ Gasket	S4, T4
Square Gasket for all Pilots	W

### PA4, PA6

### How to Order

Always order spares by using the description given in the first column under Spare Parts, stating the valve size and material. When ordering temperature pilots, specify the bulb style, capillary length and temperature range. When ordering electric pilots, specify electrical characteristics, pressures and size of main valve.

Example: 1 – Thermal System style T1 for 2" Spirax Sarco 25PT Pressure Temperature control with 8-ft capillary tubing and temperature range 120°F to 180°F.

1 – NEMA 4 Solenoid for 1½" Spirax Sarco 25PE Reducing Valve with 115 volt, 60 Hz AC coil steam pressure 200 psi.

### Maintenance

See installation and maintenance instructions supplied with each valve, copies are available on request.

## Acoustic Blankets

### Description

The Spirax Sarco removable Acoustic Blanket is an easy to install, reusable, one-piece asbestos free encapsulation designed specifically to fit and be used on Spirax Sarco 25 series main valves and L and K series control valves. In addition to providing reductions in harmful noise levels by 5 dBA, these blankets also provide insulation to limit heat energy losses. The Acoustic Blanket comes complete with inner and outer chemical resistant teflon fiberglass cloth with 1" thick high density fiberglass mat. Simple, but effective Velcro® fasteners make the blankets easy to install.

### Limiting Operating Conditions

Max. Operating Temperature 600°F (315°C) continuous

#### Available Range

1/2" to 6" AB Acoustic Blankets

### Construction Materials

Part	Material
Jacket	Teflon Coated Fiberglass
Insulation Mat	Fiberglass

### Sizing and Selection

Match Acoustic Blanket size to pilot operated regulator or control valve size regardless of end connection. For example: Select 1/2" AB for 1/2" 25P cast iron, NPT pilot operated regulator.

### Installation

Check the nameplate on the Acoustic Blanket to be sure you have the correct blanket for your valve. Slip the blanket around the valve making sure the drawstrings are located at the inlet and outlet connections of the valve. Cut-outs for piloted operated regulators are provided to slip around external transmission tubing and pilot assemblies. Attached Velcro® fastening system making sure blanket fits snug to valve.

## Acoustic Plates

The Spirax Sarco model AP Acoustic Plate is designed to graduate the expansion across a valve, and therefore reduce valve noise. The acoustic plate absorbs the impact of the vent pressure at the downstream side of the valve. It distributes the steam flow and provides a noise frequency shift to reduce the perceived noise using a multiple hole orifice pattern in the plate inserted on the downstream side of the valve. Noise level reductions of up to 10 dBA can be achieved.

### Limiting Operating Conditions

Max. Operating Pressure 250 psig (17 barg)  
 Max. Operating Temperature 650°F  
 Pressure Drop Less than 1%

### Standard Connections

AP plates are installed between standard flanges:

ANSI 150 RF flange designated "A"

ANSI 300 RF flange designated "B"

### Construction Materials

Part	Material
Plate	Cast Steel

### Installation

The Series AP Acoustic Plate is designed to reduce control valve and/or regulator noise. The plate is installed between standard ANSI 125/150 flanges or ANSI 250/300 downstream of a valve and reorients the normal exit turbulence of the steam flow. Noise reduction of up to 10 dBA can be achieved. The plates can be used in conjunction with D series noise diffusers and acoustic silencers for additional noise attenuation. See below for dimensions.

### Dimensions

(nominal) in inches and millimeters

Nominal Pipe Size	Dimension A of ANSI 150 Flange	Dimension A of ANSI 300 Flange	Avg. Weight (lbs.)
1/2"	1.75	2.00	1.0
3/4"	2.12	2.50	3.4
1"	2.50	2.75	3.6
1-1/4"	2.88	3.12	3.8
1-1/2"	3.25	3.62	4.3
2"	4.0	4.25	6.0
2-1/2"	4.75	5.00	6.5
3"	5.25	5.75	10
4"	6.75	7.00	11.5
6"	8.62	9.75	12.4
8"	10.88	12.00	14.0

### How To Order Quantity One Of:

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-3-035-US 07.10

# Acoustic Plates

## Sizing and Selection Chart for AP Plates

### How To Use Sizing Chart

Select correct acoustic plate by known flow rates (lb/hr.) and inlet pressure of control valve or regulator.

Example: Inlet pressure of control valve 150 psig @ 10,000 lb./hr. Move horizontal to intersect with 150 psig. Follow 150 psig line vertically to intersect with 10,000 lb./hr. horizontal line. Select AP 2" - 17 - I.

TI-3-035-US 07.10

# spirax sarco

## Acoustic Silencers

### Description

The Spirax Sarco acoustic silencer is designed to attenuate noise generated by control valves and/or pilot operated regulators. The silencers are particularly effective in limiting the propagation of valve generated noise into the downstream piping. Upon flow and piping configuration, noise attenuation of up to 35 dBA can be expected.

### Limiting Operating Conditions

Max. Operating Pressure	300 psig (20 barg)
Max. Operating Temperature	650°F (343°C)
Standard Range	1/2" to 24" LCV Acoustic Silencers.
Connections:	Standard connections ANSI 300 lb. raised face flange. 3/4" - 3000 lb. drain with plug. Options of ANSI 150 lb. raised face flange available.

### Construction Materials

Part	Material
Silencer	All welded steel. ASME Section VIII Div I
Insulation Mat	Fiberglass

### Dimensions (nominal) in inches

Model	A	B	C	D	Weight (lb.)
LCV-2	1/2" to 2"	5"	35"	2"	120
LCV-3	1/2" to 3"	6-1/2"	46"	3"	150
LCV-4	1/2" to 4"	10"	52"	4"	200
LCV-5	3/4" to 4"	12"	60"	5"	250
LCV-6	2" to 6"	12"	66"	6"	400
LCV-8	2" to 6"	14"	72"	8"	550
LCV-10	1-1/4" to 6"	16"	78"	10"	650
LCV-12	2" to 6"	18"	90"	12"	800
LCV-14	2-1/2" to 6"	20"	104"	14"	1200
LCV-16	2-1/2" to 6"	22"	116"	16"	1500
LCV-18	3" to 6"	24"	132"	18"	1750
LCV-20	4" to 6"	26"	146"	20"	2200
LCV-22	6"	30"	158"	22"	2800
LCV-24	6"	30"	174"	24"	3100
LCV-26	6"	32"	186"	26"	3500
LCV-28	6"	36"	202"	28"	4850
LCV-30	6"	36"	216"	30"	5000

### Installation

Connect the inlet of the silencer directly to the outlet connection of the valve. The required pipeline expansion takes place within the silencer. This expanded outlet feature eliminates the expense associated with separate expansion fittings. A suitable float and thermostatic steam trap is recommended for removing condensate from the silencer. The drain connection must always point vertically down.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-3-036-US 5.13

# Acoustic Silencers

## Sizing Acoustic Silencers

Select correct silencer by known flow rates (lb/hr), inlet, outlet pressure (psig) and size of regulator or control valve. Example: Inlet pressure to IN 25P regulator is 100 psig, outlet pressure is 60 psig @ 2400 lb/hr. Move horizontal across the 100 psig inlet line to 60 psig outlet to vertically intersect with a 1" regulator to meet or exceed capacity of 2400 lb/hr. Selection 1" LCV-2.

Inlet Pressure (psig)	Valve Size

## Noise Diffuser D Series

The D Series Noise Diffuser is designed to reduce Pressure Reducing Valve noise generation. The diffuser breaks up the normal exit turbulence of the steam flow using an engineered orifice pattern in a pipe nozzle inserted on the downstream side of a pressure reducing valve.

The amount of noise level reduction produced by the diffuser will be approximately 15 dBA. Pressure drop through the diffuser will not exceed 1% of line pressure upstream of the pressure reducing valve.

Model	D-1 to D-24
PMO	320 psig
Sizes	1/2"x 2" to 6"x20" (see over)
Connections	Male NPT/ANSI Flgd. (see over)
Construction	Carbon Steel Body
Options	Buttweld outlet connection

### Limiting Operating Conditions

**Max. Operating Pressure (PMO)** 320 psig (22 barg)

**Max. Operating Temperature** 600°F (260°C) at all operating pressures

### Construction Materials

No.	Part	Material	
1	Pipe	Steel	ASTM A106 GrB ASTM A-53-GrB ASTM A516 Gr70
2	Flanges	Steel	ASTM A105
3	Head	Steel	ASTM A-516 Gr70

### Sample Specification

An in-line noise diffuser shall be installed directly attached to the downstream connection of a pressure reducing valve to reduce noise output by approximately 15 dBA when measured by a sound level meter meeting ANSI standards. Noise Diffuser shall be manufactured of rolled and welded steel components that have been welded in accordance with ASME Section IX weld procedures. Pressure drop through the diffuser shall not exceed 1% of line pressure upstream of the pressure reducing valve. No additional pipe expansion shall be necessary downstream of the diffuser.

### Capacities:

For sizing and selection data, see overleaf.

### Installation

The Noise Diffuser inlet should be directly attached to the outlet of the Pressure Reducing Valve. This type of installation is recommended to avoid the generation of flanking noise normally found when separately installing the Pressure Reducing Valve and Diffuser with a section of pipe between them.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

Diffuser capacity depends on the inlet steam pressure to the PRV. Choose a diffuser with a capacity equal to or greater than that of the PRV, and check to confirm that the connections are compatible. If not, select the next diffuser that offers the same inlet connection as the PRV outlet. **TI-3-025-US 5.13**

## Safety Valves SV73 Series

The SV73 Series valves are built in conformance to Section I and VIII of the ASME boiler and pressure vessel code. They are primarily intended for use on power boilers and unfired pressure vessels where ASME Section I or VIII stamped valves are required. The orifice areas listed are actual orifice areas and should not be confused with the API effective orifice areas shown in most safety valve catalogs.

Model	SV73	
Sizes	1-1/2" x 2-1/2" to 3" x 4"	3" x 4" to 6" x 8"
Connections	Inlet - Female NPT or ANSI 250 Fig. Outlet - Female - NPT	Inlet - ANSI 250 Fig. Outlet - ANSI 125 Fig.
Construction	Cast Iron body with Stainless Steel Trim	
Options	Drip pan elbow See TI-3-2141-US	

### Limiting Operating Conditions (Steam)

Max. Operating Pressure (PMO)	250 psig (17 barg)
Max. Operating Temperature	406°F (208°C)

See TI-3-2121-US for sizing data.

### Construction Materials

No.	Part	Material
1	Body	ASTM A126 Class B
2	Seat	ASTM A351 Grade CF8
3	Bonnet	ASTM A126 Class B
4	Cap	ASTM A126 Class B
5	Disc	ASTM A217 CA15
6	Spring	Chrome-vanadium alloy steel
7	Upper adjusting ring	ASTM A351 Grade CF8
8	Lower adjusting ring	ASTM A351 Grade CF8
9	Stem (lower)	ASTM A479 Type 410
10	Stem (upper)	ASTM A479 Type 410
11	Spring washers (2 off)	ASTM A105
12	Bonnet stud	ASTM A193 Grade B7
13	Bonnet nut	ASTM A194 Grade 2H
14	Adjusting screw	ASTM A479 Type 410
15	Adjusting screw nut	Carbon steel
16	Release ring	Carbon steel
17	Lock-nut (2 off)	Carbon steel
18	Lever	Grey iron
20	Cap set screw	Carbon steel
21	Upper adjusting ring pin	Stainless steel
22	Lower adjusting ring pin	Stainless steel
23	Disc ball	Stainless steel
24	Pin washer	Carbon steel
25	Lever pin	Carbon steel
26	Lock-nut	Carbon steel
27	Guide plate	Carbon steel
40	Stem pin	Carbon steel
41	Name plate	Stainless steel

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

### Typical Applications

Protection of steam system downstream of pressure regulating stations, on inlet to such equipment as air coils, heat exchangers and process vessels. Also for use on flash recovery vessels on condensate return systems to protect vessels. Air systems to protect accumulation vessels and air equipment from over-pressurization. Steam boilers and generators.

### Installation

Safety valves must be installed in a vertical upright position and drained via connection 19.

Avoid having the operating pressure too near the safety valve set pressure. A very minimum differential of 5 psig or 10% (whichever is greater) is recommended. An even greater differential is desirable, when possible, to assure better seat tightness and valve longevity.

Avoid discharge piping where its weight is carried by the safety valve. Even though supported separately, changes in temperature alone can cause piping strain. We recommend that drip pan elbows or flexible connections be used where possible. If required, remove protective plug (19) and route to drain.

For full details on proper installation, please refer to the installation, operating and maintenance instructions, IM-S13-33.

### Maintenance

Develop a regular program of visual inspection. Inspection should include checking for clogged drains, discharge pipe, and dirt build-up around the valve seat.

Test the safety valve every 6 months (depending on plant's age and condition) either by raising the system pressure to the valve's set pressure or operating the hand lever.

When safety valves require repair, service adjustments or set pressure changes, work shall be accomplished by the manufacturer, or holders of "VR" stamps.

## How to Specify

To simplify selection and specifying of Spirax Sarco safety valves, use the following type numbering system. The type numbering system is ideal as the digit which comprises a specific type number has a distinct significance. The digits describe the basic valve series, materials of construction, connection type, boiler code conformance, inlet and outlet connections, orifice size and set pressure.

## SV7 safety valve selection guide

Series number	SV7	<b>SV7</b>
Construction	3 = Cast iron	<b>3</b>
ASME section	V = ASME Code Section I U = ASME Code Section VIII Blank = Valve without code stamp	<b>V</b>
Size and connection	A = 1½" NPT x 2½" NPT B = 2" NPT x 3" NPT C = 2½" NPT x 4" NPT D = 3" NPT x 4" NPT E = 1½" ANSI 250 x 2½" NPT F = 2" ANSI 250 x 2½" NPT G = 2" ANSI 250 x 3" NPT H = 2½" ANSI 250 x 3" NPT I = 2½" ANSI 250 x 4" NPT J = 3" ANSI 250 x 4" NPT L = 3" ANSI 250 x 4" ANSI 125 N = 4" ANSI 250 x 6" ANSI 125 Q = 6" ANSI 250 x 8" ANSI 125	<b>A</b>
Actual orifice area Sq. In.	J = 1.374 K = 1.968 L = 3.054 M = 3.846 N = 4.633 P = 6.830 Q = 11.811 R = 17.123	<b>J</b>
Set pressure	Specify set pressure from *5 psi g to 250 psi g	<b>180</b>
	<b>SV7</b> <b>3</b> - <b>V</b> - <b>A</b> <b>J</b> - <b>180</b>	

## How to order

**Example:** 1 off Spirax Sarco SV73-V-AJ-180 safety valve having a set pressure of 180 psi g.

*\*Note: Set pressures below 15 psi are not ASME coded and are not certified.*

## Safety Valves SV74 Series

The SV74 Series valves are built in conformance to Section I and VIII of the ASME boiler and pressure vessel code. They are primarily intended for use on power boilers and unfired pressure vessels where ASME Section I or VIII stamped valves are required. The orifice areas listed are actual orifice areas and should not be confused with the API effective orifice areas shown in most safety valve catalogs.

<b>Model</b>	<b>SV74</b>	
<b>Sizes</b>	1-1/2" x 2" to 6" x 8"	
<b>Connections</b>	Inlet: ANSI 300 RF	Outlet: ANSI 150 RF
<b>Construction</b>	Cast Steel body with Stainless Steel Trim	
<b>Options</b>	Tungsten Spring Drip pan elbow-See TI-3-2141-US	

### Construction Materials

No.	Part	Material	
1	Body	ASME SA 216 Gr. WCB	
2	Seat	F to H orifice	ASTM A479 304
		J to R orifice	ASTM A351 Grade CF8
3	Bonnet	ASME SA 216 Gr. WCB	
4	Cap	ASTM A126 Class B	
5	Disc	F to H orifice	ASTM A479 304
		J to R orifice	ASTM A217 CA15
6	Spring	Chrome-vanadium alloy steel or tungsten alloy steel	
7	Upper adjusting ring	ASTM A351 Grade CF8	
8	Lower adjusting ring	ASTM A351 Grade CF8	
9	Stem (lower)	ASTM A479 Type 410	
10	Stem (upper)	ASTM A479 Type 410	
11	Spring washers (2 off)	ASTM A105	
12	Bonnet stud	ASTM A193 Grade B7	
13	Bonnet nut	ASTM A194 Grade 2H	
14	Adjusting screw	ASTM A479 Type 410	
15	Adjusting screw nut	Carbon steel	
16	Release ring	Carbon steel	
17	Lock-nuts (2 off)	Carbon steel	
18	Lever	Grey iron	
20	Cap set screw	Carbon steel	
21	Upper adjusting ring pin	Stainless steel	
22	Lower adjusting ring pin	Stainless steel	
23	Disc ball	Stainless steel	
24	Pin washer	Carbon steel	
25	Lever pin	Carbon steel	
26	Lock-nut	Carbon steel	
27	Guide plate	Carbon steel	
40	Stem pin	Carbon steel	
41	Name plate	Stainless steel	

### Limiting Operating Conditions (Steam)

Max. Operating Pressure (PMO)	300 psig (20.7 barg)
Max. Operating Temperature	446°F (217°C) 750°F (399°C) with Tungsten Spring

See TI-3-2121-US for sizing data.

### Pressure/Temperature Limits

The product **must not** be used in this region.

A tungsten alloy spring must be used in this region. Consult Spirax Sarco for further information

### Typical Applications

Protection of steam system downstream of pressure regulating stations, on inlet to such equipment as air coils, heat exchangers and process vessels. Also for use on flash recovery vessels on condensate return systems to protect vessels. Air systems to protect accumulation vessels and air equipment from over-pressurization. Steam boilers and generators.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-3-216-US 11.15

## SV7 safety valve selection guide

Series number	SV7	<b>SV7</b>
Construction	4 = Cast steel	<b>4</b>
ASME section	V = ASME Code Section I	<b>V</b>
	U = ASME Code Section VIII	
Size and connection	Blank = Valve without code stamp	<b>X</b>
	S = 1½" ANSI 300 x 2" ANSI 150	
	T = 1½" ANSI 300 x 2½" ANSI 150	
	U = 2" ANSI 300 x 3" ANSI 150	
	V = 2½" ANSI 300 x 4" ANSI 150	
	W = 3" ANSI 300 x 4" ANSI 150	
	X = 4" ANSI 300 x 6" ANSI 150	
Y = 6" ANSI 300 x 8" ANSI 150		
Actual orifice area Sq. In.	F = 0.328	<b>P</b>
	G = 0.537	
	H = 0.841	
	J = 1.374	
	K = 1.968	
	L = 3.054	
	M = 3.846	
	N = 4.633	
P = 6.830		
Q = 11.811		
R = 17.123		
Set pressure	Specify set pressure from 5 psig to 300 psig*	<b>180</b>

For tungsten alloy spring add 'T' after set pressure eg: 180 'T'.

**SV7** **4** - **V** - **X** **P** - **180**

## How to order

**Example 1:** 1 off Spirax Sarco SV74-V-XP-180 safety valve having a set pressure of 180 psig.

If a tungsten alloy spring was required the order would read as follows:  
**Example 2:** 1 off Spirax Sarco SV74-V-XP-180T safety valve having a set pressure of 180 psig.

**\*NOTE: R orifice, Section 1, pressure limit is 250 psig**

**\*NOTE: Set pressures below 15 psi are not ASME coded and are not certified.**

## Installation

Safety valves must be installed in a vertical upright position and drained via connection 19.

Avoid having the operating pressure too near the safety valve set pressure. A very minimum differential of 5 psig or 10% (whichever is greater) is recommended. An even greater differential is desirable, when possible, to assure better seat tightness and valve longevity.

Avoid discharge piping where its weight is carried by the safety valve. Even though supported separately, changes in temperature alone can cause piping strain. We recommend that drip pan elbows or flexible connections be used where possible. If required, remove protective plug (19) and route to drain.

For full details on proper installation, please refer to the installation, operating and maintenance instructions, IM-S13-33.

## Maintenance

Develop a regular program of visual inspection. Inspection should include checking for clogged drains, discharge pipe, and dirt build-up around the valve seat.

Test the safety valve every 6 months (depending on plant's age and condition) either by raising the system pressure to the valve's set pressure or operating the hand lever.

## How to Specify

To simplify selection and specifying of Spirax Sarco safety valves, use the following type numbering system. The type numbering system is ideal as the digit which comprises a specific type number has a distinct significance. The digits describe the basic valve series, materials of construction, connection type, boiler code conformance, inlet and outlet connections, orifice size and set pressure.

TI-3-2121-US 10.15

## Drip Pan Elbow

The Drip Pan Elbow, when used in conjunction with a safety relief valve, provides a suitable unrestricted, self-draining outlet. This improves the performance and longevity of the safety valve by alleviating axial loads on the valve, which could impair its operation and shut off.

Model	DPE	
Sizes	3/4" to 4"	6" & 8"
Connections	Female NPT	Flanged ANSI 125
Construction	Cast Iron (ASTM A126 CL B)	

### Typical Applications

Specifically for use on the outlet connection of safety/relief valves to assure unrestricted discharge.

### Dimensions (nominal) in inches and millimeters

SIZE INLET in/mm	A in (mm)	B in (mm)	C in (mm)	D in (mm)	E in (mm)	F in (mm)	G. NPT in (mm)	Weight Lb. (kg.)

Sizes: 3/4" - 4"  
Construction Material: A126-B Cast Iron

Sizes: 6" - 8"  
Construction Material: A126-B Cast Iron

### Limiting Operating Conditions

Max. Operating Pressure (PMO) 250 psig (17 barg)  
Max. Operating Temperature (TMO) 450°F (232°C) at all operating pressures

### Installation

The Drip Pan Elbow is to be connected to the discharge connection of the safety/relief valve by a short pipe nipple. Flanged valves 4" and smaller will require a companion flange and short nipple the same size as the valve outlet. The drain connection on the bottom of the elbow should be piped to waste.

Please refer to ASME code for additional installation details.

### Sample Specification

Drip Pan Elbows for use with safety/relief valves shall be ASTM A126 CL B Cast Iron, and be of the same size as the valve outlet or larger. Pipe as shown on the drawings.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

## SV5601 & 5708 Series Bronze Safety Valves ASME Section I & VIII - NB Certified for Air, Gas and Steam

### Description

Spirax Sarco Bronze valve line is a high capacity safety valve used for boilers, piping lines and vessel protection. Designed and engineered for heavy-duty industrial use. ASME approved and National Board flow-rated for capacity.

Sizes from 1/2" to 2-1/2"; NB rated to 250#; Temperatures to 406°F.

### Usages

SV5601 Series is used for ASME Section I applications to pressure ratings of 250 psig. V and NB stamped for fired vessels. Boilers, or most areas where steam safety valves are required.

SV5708 Series is used for ASME Section VIII applications to pressure ratings of 250 psig. UV and NB stamped for unfired vessel protection. Used for many applications to protect or relieve pressure for Air, Gas and Steam.

### Features

- Designed for durability
- 6 orifices – 12 sizes of piping options
- Top guided seating and discharge
- Full nozzle; high capacity levels
- Excellent re-seating characteristics with pivoting ball-post design
- Short, tuned blow-down and can be adjusted with double ring to meet specific requirements
- Heavy duty hood and lever mechanism
- Standard 17-7 stainless steel springs

### Options

- Stainless steel whetted trimming package (seat, disk and interiors)
- O-ring seating. (Teflon, EDPM, Viton, or as specified)
- Bubble tight seating options
- Anti vibrating spring for lift lever
- Packed lift lever
- BPT pipe threading

### Ordering

Specify Section I or VIII valves, set pressure psig, capacity requirements when ordering. See opposite page for details.

### Parts Identification and Materials

Item	Part Name	Material	ASTM

17	Disc Nut	Brass	B-16
18	Disc	Brass	B-16
19	Regulator Screw	Brass	B-16
20	Ball Bearing	Stainless Steel	

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-3-215-US 11.15

# SV5601 & 5708 Series Bronze Safety Valves

## ASME Section I & VIII - NB Certified for Air, Gas and Steam

### Sample Specification

3/4" x E x 1" Spirax Sarco Bronze Series Safety Valve shall be fitted with enclosed spring and external lifting lever. Furnish with manufacturer's standard connections and valve body of cast brass with bronze internals. When ordering Safety Valves for use on power boilers, specify (V) code stamp as required by ASME Code Section I.

### Installation

Valve should be installed in vertical upright position as close as possible to the connection provided with no unnecessary intervening pipe or fitting. Under no circumstances should there be a shut off valve or restriction of any kind between the safety valve and the connection provided. For full details on proper installation, please refer to the installation, operating and maintenance instructions, IM-3-215-US.

### Maintenance

This product is factory sealed for tamper-proof operation, and no repair parts are available. Test the safety valve every 6 months (depending on plant age and condition), preferably by raising the system pressure to the safety valve's set pressure or operating the hand lever. For full details on proper maintenance, please refer to the installation, operating and maintenance instructions, IM-3-215-US.

## SV418 Series Bronze Safety Valves ASME Section VIII - NB Certified for Air, Gas, Steam, and Liquid

### Description

Spirax Sarco's SV418 safety and relief valve is designed for accuracy and reliability. Engineered for heavy-duty industrial usage. Multiple purpose safety and relief for Liquid, Steam, Air, and Gas services. ASME and National Board Certified for Section VIII service. ASME Section VIII to 750 psi for Liquid, Air, and Gas. 300 PSI for Steam.

Sizes from ½" to 3"; NB rated to 750#; Temperatures from -320°F to 425°F.

### Features

- Full nozzle – top guided design
- Short, precise blow-down
- Wide choice of inlet/outlet sizes
- Excellent reseating characteristics
- Designed long term heavy industrial use
- Closed hex cap
- Back pressure tight
- Drainhole with threaded plug

### Options

- BSPT piping
- O2 Cleaning and cryogenic services

### Usages

Pressure Vessels, Pumps, Hydraulics, Tanks, Steam Systems, Chemical, Cryogenic, Air and Gas Compressors, Separators, by-pass and over pressure protection. Choose for most industrial applications requiring a safety relief valve.

### Parts Identification and Materials

Item	Description	Series 418
1	Nozzle	SS

16	Body	Bronze
17	Nozzle washer	PTFE
18	Gasket	PTFE
19	Lock screw	Brass
20	Seal wire	Steel
21	Nameplate	SS
22	Drain Plug	SS

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-3-218-US 4.13

# SV418 Series Bronze Safety Valves

## ASME Section VIII - NB Certified for Air, Gas, Steam, and Liquid

### Sample Specification

Spirax Sarco SV418: As required for equipment according to ASME Boiler and Pressure Vessel Code. Stainless steel full nozzle, top guided design. Stainless steel ring and disk. Stainless steel spring with adjustable pressure range and positive shutoff, factory set and sealed. Back pressure tight, includes drainhole with threaded plug.

### Maintenance

This product is factory sealed for tamper-proof operation, and no repair parts are available. Test the safety valve every 6 months (depending on plant age and condition), preferably by raising the system pressure to the safety valve's set pressure or operating the hand lever. For full details on proper maintenance, please refer to the installation, operating and maintenance instructions, IM-3-215-US.

### Installation

Valve should be installed in vertical upright position as close as possible to the connection provided with no unnecessary intervening pipe or fitting. Under no circumstances should there be a shut off valve or restriction of any kind between the safety valve and the connection provided. For full details on proper installation, please refer to the installation, operating and maintenance instructions, IM-3-215-US.

## SV69L Bronze Liquid Relief Valves Non-ASME Coded

### Description

Spirax Sarco SV69L Series Liquid Relief valves are an industry standard relief valve used for liquid applications. Engineered and designed for heavy-duty industrial usages.

Sizes from 1/4" to 3", pressure to 600#, temperatures to 450°F.

### Usages

- Pressure relief, liquid relief, by-pass and over-protection
- Continuous relief
- Pressure regulation
- Pumping stations, tanks, hydraulics, fluid lines, oil fields, piping lines.

### Features

- Field adjustable (Set pressure needs to be provided)
- Metal-to-metal precision lapped seating
- Sealed hex cap with O-ring teflon seal
- One piece enclosed bonnet to minimize leakage
- Back pressure tested against leakage (now standard)
- Easy to clean and maintain by simple removal of the bonnet
- 302 Stainless steel springs (STD)

### Options

- Wheel handle
- Stainless steel inserts for corrosive or higher pressure protection
- Polishing and chrome plating

### Parts Identification and Materials

Item	Part Name	Material
1	Hood	Brass
2	Pressure Screw	Brass

## USTS II Universal Steam Trap Station (Requires Universal Trap of Choice)

Universal Connector and Traps  
Steam Traps

The USTS-II Universal steam trap station is designed to have inlet and outlet isolation valves, a integral strainer with blow-down and test valve. Designed as a complete steam main drip or tracer steam trap station. The station will support all of the Spirax Sarco universal connection steam traps.

Model	USTS II
PMO	650 psig
Sizes	1/2", 3/4"
Standard Flow Direction	Left to Right (Right Hand)
Connections	NPT, SW
Construction	Stainless Steel
Optional Flow Direction	Right to Left (Left hand), handle option

### Limiting Operating Conditions

Max. Operating Pressure (PMO)	650 psig (45 barg)
Max. Operating Temperature (TMO)	750°F (399°C)
Pressure Shell Design Conditions	
PMA	650 psig (45 barg)

### Construction Materials

No.	Part	Material
1	Body casting	Stainless Steel ASTM A351 CF8
2	Valve spindle	Stainless Steel
3	Valve head (internal)	Stainless Steel
4	Valve packing unit	Stainless Steel
5	Valve packing (internal)	Graphite
6	Washers (internal)	Stainless Steel
7	Strainer screen (internal)	Stainless Steel
8	Blowdown valve body	Stainless Steel
9	Blowdown valve stem	Stainless Steel
10	Blowdown ball head (Internal)	Stainless Steel
11	Blowdown retaining clip (internal)	Stainless Steel
12	Connector screws	Alloy Steel (Plated) ASTM A193 Gr.B7
13	Locking Nut	Stainless Steel
14	Locking Nut Pin	Stainless Steel
15	Handle	Stainless Steel
16	Handle Pin	Stainless Steel

## USTS II Sample Specification

The USTS steam trap station to be manufactured of all stainless steel construction. The station will have two isolation valves, one trap test valve and one strainer blowdown valve. The test valve is on the discharge side of the trap to test trap function: to depressurize that area, or to check the condensate return lines for plugging. The inlet isolation valve blocks the trap inlet while the outlet valves blocks the outlet to the condensate return line downstream of the test valve. The station is supplied with an integral inlet strainer with a blowdown valve for clean out and depressurized mode so the trap or strainer can be repaired or replaced. The station will accept all Spirax Sarco universal traps or any competitors traps who use the standard universal connector design. To be supplied with either left to right flow or right to left flow. Handle option available on all models.

## Installation

Valve handles to be in upward position, with the strainer pointing straight down and trap connection on the side. Mount selected trap to the connector and torque to proper torque level. On initial start-up turn inlet and outlet valves to test to blow any installation dirt and debris from the system, (be careful to stay away from flow). Turn both valves to the on position.

## How to order

Model number / pipe size / connection type  
Example: USTS II 3/4" NPT (L/R right hand)

## SPARES

Blowdown Valve Assembly	2 required for complete station
Strainer Screen	1 required
Valve Assembly (isolation)	2 required for complete station
With or Without Handles	
Mounting bolts	2 required

Optional  
Lock-out/Tag-out Box  
for Isolation Valves or  
Blowdown Valves  
On Stations Without Handles

## Universal Pipeline Connector (Requires Universal Trap of Choice)

Steam Traps  
Universal Connector and Traps

### Description

The universal straight connector and the universal strainer connectors for use with UTD52L, UTD52H, UTD52SL, UTD52SH, UTD52L-HP, UFT14, UFT32, UIB30H, UBP32 steam traps. Two bolt quick disconnect design for horizontal and vertical piping installations.

Model	Universal straight and strainer connectors
PMO	Dependant on trap type
Sizes	1/2", 3/4", 1"
Connections	NPT, SW to ANSI 16.11
Construction	Stainless steel (standard)
Options	Left hand, Cast Steel SW only, with Spiratec sensor see TI-P128-17-US

### Limiting Operating Conditions

**Max. Operating Pressure (PMO):** 600 psig (42 Bar). Trap may dictate actual PMO if lower when assembled (See trap TIS sheet)

**Max. Operating Temperature (TMO):** 750 deg F (400 deg C). Trap may dictate actual TMO if lower when assembled (See trap TIS sheet)

### Pressure Shell Design Conditions

**Max Allowable pressure (PMA):**

720 psig to 100 deg F 50barg/up to 38 deg C  
600 psig to 750 deg F 42 barg/400 deg C

**Max allowable temperature (TMA):**

750 deg F /600 psig 400 deg C / 42barg  
Designed for a maximum cold hydraulic test pressure of 900 psig

**Note:** selected trap may dictate max allowable pressures and temperatures

### Materials

**Trap of choice required. Connectors cannot be used alone.**

No	Part	Material	MATERIAL SPEC.
1	Standard Straight connector body	Austenitic Stainless steel	ASTM A351 CF8
1	CS straight SW connector body	Cast Steel	ASTM A216 Gr. WCB
2	Standard strainer connector body	Austenitic Stainless steel	ASTM A351 CF8
2	CS strainer connector body	Cast Steel	ASTM A216 Gr. WCB
3	Strainer screen	Austenitic Stainless steel (.8 mm perforations)	316L
4	Cap gasket	Austenitic Stainless steel	BS 1449 304 S16
5	Strainer cap	Austenitic Stainless steel	AISI 303
6	Blowdown valve body	Stainless steel	AISI 303
7	Blowdown valve stem	Stainless steel	AISI 303
8	Blowdown ball head (not shown internal)	Stainless steel	AISI440

### Spare parts

- Blowdown valve retro fit kit 4,5,6,7,8
- Strainer screen 3
- Strainer cap gasket 4 (package of 3)

### Installation

The connector will be installed in a horizontal or vertical pipeline. Full ported isolation valves should be installed up stream and downstream of the connector /trap. The trap shall be fitted as shown on IMI accompanied with the trap.

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

TI-2-519-US 4.15

## Determining whether you need right hand or left hand connector

Because of the location or space constraints you may need a right or left hand strainer connector. When straddling the piping in the direction of flow the standard right hand connector will have the trap body facing the left side with the mounting bolt to the right. The left hand strainer connector will have the trap body on the right and the mounting bolts on the left.

## Operation and Maintenance

Only the strainer connector with blow down can be operated. Turning blowdown valve counter clockwise 1/2" to 1" turn. Clock wise to close. Do not use excessive force to close as damage to seating surface could occur.

Before performing any maintenance make sure the unit is isolated and all pressure has been relieved. Replacing strainer screen remove strainer cap and gasket and remove screen. Replace with new screen and gasket and tighten to 125-140 ft-lbs. If blow down valve is replaced tighten to 55 ft-lbs. See trap IMI for all other maintenance.

## Sample Specification

Steam trap shall be purchased with the pipeline connector, which once installed remains permanently in the pipeline. Trap shall be attached to the connector by two bolts to enable simple quick rapid installation and replacement. The connection is designed to allow installation on pipe work that is vertical, horizontal, or any angle in between. When specified, the connector shall be provided with integral "Y" pattern strainer with or with integral blowdown valve right hand or left hand pattern.

Steam Traps

Universal Connector and Traps

**es r t o**  
The STS17.2 compact pipeline connector steam trapping station has been designed to provide a convenient ready to install trapping solution, which includes: upstream and downstream isolation valves (2), body incorporating universal connector + strainer (1) and check valve blanking plug (16).

**Available types**

The STS17.2 is available with either single or double upstream isolation.

The STS17.2 trapping solution incorporates Spirax Sarco universal connector, which allows speedy trap maintenance. The following swivel connector steam traps (sold separately) can be used with this pipeline connector enabling it to be tailored to suit any application:

- **UTD52** thermodynamic steam traps.
- **UFT32** ball float steam trap.
- **UIB30** and **UIB30H** inverted bucket steam traps.
- **UBP32** balanced pressure steam trap.
- **USM** bimetallic steam trap.

**ta ar s**  
These products fully comply with the requirements of the European Pressure Equipment Directive 97/23/EC.

**Cert f at o**  
These products are available with certification to EN 10204 3.1. Note All certification/inspection requirements must be stated at the time of order placement. For other certification contact Spirax Sarco.

**es a e o e t o s**  
½", ¾" and 1" screwed NPT or socket weld. (BSP optional)  
½", ¾" and 1" ASME 150 and ASME 300.  
(DN15, DN20 and DN25 flanged EN 1092 PN40 optional)

**t o a l e t r a s**

te r a l s e n s o r t e 1 (steam only) or 1 (for waterlogging) for use with R1C or **WLSL1 with DIODE** for use with RI6C are available as optional extras, to enable operational monitoring of the steam trap. Please ote that the optional Spiratec 1 and 1 sensors st o t e f t t e w e t e 1 2 s s t a l l e a v e r t a l a l a t o .

**BDV1 blowdown valve** is also available for cleaning the strainer during operation. Care should be taken when using the BDV1 blowdown valve as the discharge may be hot. Please note that a BDV1 cannot be used when a Spiratec sensor has been chosen to be part of the unit.

**Retrofit double isolation valve and spool piece** to convert a single upstream isolation version to double isolation.

**Insulation jacket** is available to reduce heat loss and energy wastage. See separate literature.

Universal Connector and Traps

are arts

The spare parts are available as indicated below. No other parts are supplied as spares.

Available spares

Isolation ball valve seat and stem seals		21	22
Strainer screen and gasket			23
Spare sensor and sensor gasket	SSL1 Spiratec sensor		24
	WLSL1 diode waterlogging sensor		25
Spiratec retrofit kit	<b>Note:</b> State whether an SSL1 or WLSL1 sensor is required.	20, 21 + 23 or 24	
Check valve assembly			17, 18
Double isolation conversion kit (includes spool piece and additional isolation valve)			X
BDV1 blowdown valve retrofit kit			20, 21 + 25

How to order spares

Always order spares using the description given in the column headed 'Available spares' and state the size and model number. Example: 1 off Spare Spiratec sensor and sensor gasket with WLSL1 diode waterlogging sensor for a 1/2" STS17.2 compact pipeline connector steam trapping station.

Installation and Maintenance Instructions

For full details see the Installation and Maintenance Instructions (IM-P128-23) supplied with the product.

How to order

Example: 1 off Spirax Sarco 1/2" screwed BSP STS17.2 stainless steel pipeline compact connector steam trapping station, having a Spiratec SSL1 sensor.

## IPC20 and IPC21 Pipeline Connectors with Integral Spiratec Sensors (Requires Universal Trap of choice)

Universal Connector and Traps Steam Traps

### Description

The **IPC20** is a pipeline connector with integral strainer and Spiratec sensor for use with UTD52L, UTD52H, UTD30L, UTD30H and UBP32 steam traps. The **IPC21** is a pipeline connector with an integral strainer and Spiratec sensor for use with UIB30, UIB30H, UFT14 and UFT32 steam traps. Both the **IPC20** and **IPC21** can be fitted with the following sensor options:

- SSL1 Sensor** - for detection of steam leakage.
- WLS1 sensor with diode** - for use with R16C monitor to detect steam wastage and waterlogging.
- WLS1 sensor without diode** - for use with R1C to detect steam wastage and waterlogging.

### Limiting Operating Conditions

**Max. Operating Pressure (PMO)** 464 psig 32 barg connector only  
Trap may dictate actual PMO if lower when assembled  
(See trap TIS sheet)

**Max. Operating Temperature (TMO)** 464°F (240°C)

### Pressure Shell Design Conditions

**Max. Allowable Pressure (PMA)** 725 psig 50 barg connector only  
Trap when mounted to connector may dictate PMA if lower  
(See Trap TIS sheet)

**Max. Allowable Temperature (TMA)** 464°F (240°C)  
Selected trap may lower these values.

### Operating range

■ The product must not be used in this region.  
\* Maximum operating pressure recommended for saturated steam service.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

<b>Model</b>	IPC20 & IPC21 Series
<b>PMO</b>	Dependent on Trap Type
<b>Sizes</b>	1/2", 3/4", 1"
<b>Connections</b>	NPT Standard
<b>Construction</b>	Stainless Steel
<b>Options</b>	SW connections to ANSI B16.11 BSP

(Trap of choice sold separately)

## Spare Parts

The spare parts available are detailed below. No other parts are supplied as spares.

### Available spares

Strainer screen and gasket	2, 4
Sensor and sensor gasket	5, 6

Sensor gasket package of 10

## How to order spares

Always order spares using the description given in the column headed 'Available spares' state the size and model number.

Example: 1 - Strainer screen and gasket for the 1/2" IPC20 connector.

## Installation

The connector will be installed in a horizontal pipeline. The connector face must be in a vertical plane with the Sensor in a downward position. Full ported isolation valves should be installed up stream and down stream of the connector. The trap should be fitted to the connector with its cap uppermost or as shown in the related trap IMI. Note each trap type will have its own IMI.

## Maintenance

The sensor should be removed periodically to inspect and clean the tip and insulator.

## Sample Specification

Connector shall be supplied with either a SSL1 steam loss only or WLS1 steam loss and water logging sensor. The connector with integral sensor will be made in sizes 1/2" to 1" in stainless steel with NPT, BSP or SW connections. The connector shall be capable of working with any of the Spirax Sarco universal connector steam traps. The SSL1 Sensor will work with TYPE 30, R1C, R16C. The WLS1 will work with the R1C and the R16C. The connector is designed to remain in line with the trap and sensor easily removable without disturbing the piping.

## UTD52 Series Universal Thermo-Dynamic® Steam Trap (for use with Universal Connector)

Universal Connector and Traps Steam Traps

The **Thermo-Dynamic® steam trap** cycles periodically to discharge condensate very near to steam temperature. It is unaffected by waterhammer or superheat. The UTD is a unique solution to maintain the disc in the horizontal plane by means of a universal connector. The trap is easily replaced or removed for servicing without disturbing the pipe connections.

<b>Model</b>	UTD52L, UTD52H, UTD52L-HP, UTD52SL, and UTD52SH
<b>PMO</b>	450 psig / 600 psig HP model
<b>Trap Construction</b>	Stainless Steel
<b>Trap Options</b>	Slotted disc
<b>Connector Sizes</b>	½", ¾", 1"
<b>Connector Connections</b>	NPT, SW
<b>Connector Construction</b>	Straight or strainer type (left or right hand)
<b>Connector Options</b>	Stainless steel or cast steel SW connections to ANSI B16.11 Carbon steel USTSII trap station

**Standard Strainer Connector shown**  
(Connector of choice sold separately)  
See TI-2-519-US

### Limiting Operating Conditions

**Max. Operating Pressure (PMO)** 450 psig (31 barg) Standard  
600 psig (42 barg) UTD52L-HP

**Max. Operating Temperature** 750°F (400°C)

**Pressure Range** 3.5 to 450 psig UTD52L, UTD52H,  
UTD52SL, UTD52SH  
300 to 600 psig UTD52L-HP

*Maximum back pressure should not exceed 80% of the upstream pressure*

### Pressure Shell Design Conditions

**PMA** 720 psig/up to 100°F 50 barg/up to 38°C - ALL  
Max. allowable pressure 450 psig/750°F 31 barg/238-400°C - Standard  
600 psig/750°F 42 barg/400°C - UTD52L-HP

**TMA** 750°F/0-450 psig 400°C/0-31 barg - Standard  
Max. allowable temperature 750°F/600 psig 400°C/42 barg - UTD52L-HP

Designed for a maximum cold hydraulic test pressure of 1080 psig.

**Typical Applications** Steam main drainage, and steam tracing and constant pressure/constant load applications.

### Capacities

### Sample Specification

Steam trap shall be supplied with a pipeline connector which, once installed, remains in the line permanently. Trap shall be attached to the connector by two bolts to enable simple and rapid installation and replacement. The connection is designed to allow installation on pipework that is vertical, horizontal, or any angle in between. Operation shall be on/off discharge with tight shut off and no bleed or "controlled" leak, with back pressures up to 80% of inlet pressure. When specified, the connector shall be provided with integral "Y" pattern strainer with or without integral blowdown valve, standard or left hand pattern. The trap itself shall be Thermo-Dynamic® disc type of stainless steel construction and integral seat design with hardened disc and seating surface. Cap to have integral ceramic insulator with stainless steel cover.

**Determining whether you need Standard Strainer Connector or Left Hand** — Because of location or space constraints, when straddling the pipe facing in the direction of flow the standard strainer connector with the trap body facing the left side with bolt on the right. The left hand connector will have the trap body on right with the bolts on the left.

### Installation

The connector can be installed in horizontal or vertical lines. The connector face must be in a vertical plane. The trap should be fitted to the connector with its cap uppermost. Full-port isolating valves should be installed upstream and downstream of the connector.

### Maintenance

The trap can be removed for repair or replacement without disturbing the connector piping connections. Complete isolation of the connector from both supply and return line is required before the trap is removed. The trap should be removed from the connector and disassembled periodically for inspection and cleaning of the disc and seat. **Complete installation and maintenance instructions are given in the IM-2-5161-US, which accompanies the product.**

### Spare Parts

Connector Screw & Gasket Set	A, B, C
Disc	D
Cap Assy	E
Strainer Screen	G
Blowdown Valve	H
Strainer Cap Gasket	F

Available spare parts are shown in heavy outline. Parts drawn in broken line are not supplied as spares.

Universal Connector and Traps

## UFT32 Series

### Sealed Stainless Steel Float & Thermostatic Steam Trap (for use with Universal Connectors)

Universal Connector and Traps  
Steam Traps

<b>Model</b>	UFT32-4.5, UFT32-10, UFT32-14, UFT32-21, UFT32-32
<b>Trap Construction</b>	Stainless Steel
<b>Connector Sizes</b>	1/2", 3/4", 1"
<b>Connector Connections</b>	NPT, SW
<b>Connector Construction</b>	Straight or strainer type (left or right hand)
<b>Connector Options</b>	Stainless steel or cast steel Carbon steel USTSII trap station

#### Description

The UFT Series of Traps is an austenitic stainless steel maintenance free sealed ball float steam trap with an integral automatic air venting capability. The UFT is designed for differential steam pressures up to 465 psig. When installed with a suitable pipeline connector the UFT can easily and simply be removed without breaking into the pipeline, thus speeding up trap replacement with minimal system downtime. Pipeline connectors are available with screwed, socket weld and flanged end connections.

#### Standards

The body to cover welded joint complies with ASME Section IX and BS/EN 288

This product fully complies with the requirements of the Escape Pressure Equipment Directive 97/23/EC.

#### Certification

The product is available with material certification to EN 10204 3.1.B as standard and must be specified at the time of order placement.

#### Sizes and pipe connections

The UFT can be fitted to a variety of different pipeline connectors including:  
 Universal straight connector 1/2", 3/4", 1"  
 Strainer connector 1/2", 3/4", 1"  
 Standard or Left Hand with Blowdown Valve

#### Limiting conditions (ISO6552)

Maximum body design conditions	ANSI/ASME 300	
PMA - Maximum allowable pressure	725 psig	50 barg
TMA - Maximum allowable temperature	752°F	400°C
Designed for a maximum cold hydraulic test pressure of	948 psig	64.5 barg

#### Materials

No.	Part	Material	
1	Body	Austenitic stainless steel 304	EN 10213-4 1.4308; ASTM A351 CF8
2	Cover	Austenitic stainless steel 304	EN 10213-4 1.4308; ASTM A351 CF8
3	Connector screws	Steel	ASTM A193 B7
4	Flange	Alloy steel	A322 Gr.4130
5	Inner gasket	Stainless steel/graphite filler	Spirally wound AISI 304 strip
6	Outer gasket	Stainless steel/graphite filler	Spirally wound AISI 304 strip
7	Main valve seat	Stainless steel	BS 970 431 S29
8	Main valve/air vent seat gasket	Stainless steel	BS 1449 304 S11
9	Main valve	Stainless steel	BS 6105 CI A2-70 assembly screws
10	Ball float and lever	Stainless steel	BS 1449 304 S16

4.5 barg	10 barg	14 barg	21 barg	32 barg

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.

In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-P146-02-US 4.15

# UFT32 Series

**Dimensions/weight** *approximate in mm and kg*

Size	A	B	C	Weight
UFT32	6.3" 161	3.7" 94	2.2" 57	4.5 lbs 2.02

## Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P146-01) supplied with the product.

The UFT can be installed on any pipeline connector, but must be installed in a horizontal plane with the plug (14) downwards.

## How to specify

Steam traps shall be sealed ball float traps UFT type suitable for a differential operating pressure of either 65, 150, 203,300 or 465 psig. Traps to be zero maintenance and be connected to a separate pipeline connector by two screws to allow for quick and simple installation/replacement. For example Spirax Sarco UFT32-10 ball float steam trap.

## How to order

When ordering a UFT and connector they must be ordered individually as they are supplied as separate components to ease installation. Each UFT is supplied in a protective box complete with inner and outer gasket (securely crimped in place) and two connector screws.

Example: 1 of Spirax Sarco UFT sealed stainless steel ball float steam trap (for use with pipeline connectors).

## How to order spares

Always order spare parts by using the description given in the column headed 'Available spares' and state the size, model no. and pressure rating of the trap.

Example: 2 x Connector screws for a Spirax Sarco UFT sealed stainless steel ball float steam trap (for use with pipeline connectors).

## Capacities (in accordance with ISO 7842)

**Note:** Capacities shown are based on discharge at saturation temperature. When discharging sub-cooled condensate the air vent provides extra capacity. Under start-up conditions the thermostatic air vent will be open, and will provide additional condensate capacity to the main valve assembly. This will provide a minimum of 100% increased capacity above the hot condensate figures shown.

## UFT32 Series Hot Condensate Capacity #/hr.

Pressure (psig)	UFT 32-4.5	UFT 32-10	UFT 32-14	UFT 32-21	UFT 32-32

## UBP32 Balanced Pressure Throstatic Steam Trap (for use with Universal Connectors)

Universal Connector and Steam Traps

The welded stainless steel element is self-adjusting over the entire operating pressure range and will discharge condensate at approximately 22°F (12°C) below saturated steam temperature. The element is resistant to waterhammer. The connector can be installed in either horizontal or vertical piping, and the trap is easily removed without disturbing the pipework.

<b>Model</b>	<b>UBP32</b>
<b>PMO</b>	464 psig
<b>Trap Construction</b>	Stainless Steel, Tamper proof body
<b>Trap Options</b>	Subcooling capsule filling Near to steam capsule filling
<b>Connector Sizes</b>	½", ¾", 1"
<b>Connector Connections</b>	NPT, SW
<b>Connector Construction</b>	Straight or strainer type (left or right hand) Stainless steel or cast steel
<b>Connector Options</b>	SW connections to ANSI B16.11 Carbon steel USTSII trap station

(Connector of choice sold separately)  
See TI-2-519-US

**Straight Connector shown**

### Construction Materials

No.	Part	Material	
1	Body	Austenitic stainless steel (304 grade)	ASTM A351 Gr. CF8
2	Cover	Austenitic stainless steel (304 grade)	ASTM A276 Gr. 304
3	Screen	Stainless Steel	
4	Seat	Stainless Steel	
5	Capsule	Stainless Steel	
6	Spacer plate	Stainless Steel	
7	Spring	Stainless Steel	
8	Inner gasket	Stainless Steel graphite filler	
9	Outer gasket	Stainless Steel graphite filler	
10	Connector screws	Steel	ASTM A183 B7

### Limiting Operating Conditions

**Max. Operating Pressure (PMO)** 464 psig (32 barg)

**Max. Operating Temperature** 572°F (300°C) at 450 psig (31 barg)

See chart below  
For all other pressures and temperatures

### Pressure Shell Design Conditions

**PMA** Max. allowable pressure  
720 psig/up to 100°F 50 barg/up to 38°C  
450 psig/459°F 31 barg/237°C  
400 psig/752 °F 27 barg/426°C

**TMA** Max. allowable temperature  
752°F/0-400 psig 400°C/0-27 barg

### Operating Range

Light gray: The product must not be used in this region.  
Dark gray: The product must not be used in this region as damage to internals may occur.

### Capacities

Orifice Size = .157"

### Typical Applications

Steam tracing systems and steam main drip stations, kitchen and hospital equipment, steam coils, and steam radiators.

### Capsule Filling

As standard, the trap is supplied with filling for 22°F (12°C) , below saturation.

As an optional alternative, a near to steam fill with a 7°F (4°C) below saturation or a sub cooled 40°F (22°C) below saturation version can be supplied.

Note: If the alternative capsule is required, this must be clearly stated on the order.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

# UBP32 Balanced Pressure Thermostatic Steam Trap

(for use with Universal Connectors)

Dimensions (nominal) in inches and millimeters							
Size	A	B	C	D	E	F	Weight
1/2"	2.4 61.9	2.2 5.6	1.3 33	1.8 46	2.7 69	3.0 76	3.5 lb 1.62 kg

1"	3.5 89	3.3 84	1.3 33	1.8 46	2.7 69	4.1 104	4.2 lb 9.26 kg

The connector may be rotated to any position.

## Sample Specification

Steam trap shall be supplied with a pipeline connector which, once installed, remains in the line permanently. The trap shall be attached to the connector by two bolts, to enable simple and rapid installation and replacement. The connection is designed to allow installation on pipework that is vertical, horizontal or any angle in between. The trap itself shall be maintenance-free and tamper-proof design of all stainless steel construction with forged body and drawn cover completely sealed against leakage. Operating element to be a solidly liquid-filled thermostatic capsule which self adjusts to all pressures to 435 psig. Trap shall vent air freely and withstand waterhammer, freezing and superheat.

## Installation

The connector can be installed in either horizontal or vertical pipework. Full port isolation valves should be installed upstream and downstream of the connector. Line the threaded holes in the trap up with the holes in the connector. Insert the bolts supplied through the connector and thread into the trap evenly. Torque bolts evenly to 22- 26 ft-lbs.

## Maintenance

This product is factory sealed for tamper-proof operation. Complete isolation from both supply and return line is required before the trap is removed.

**Complete installation and maintenance instructions are given in the IMI sheet, which accompanies the product.**

## Spare Parts

Connector Screw & Gasket Set A, B, C

Available spare parts are shown in heavy outline. Parts drawn in broken line are not supplied as spares.

## UIB30 and UIB30H Sealed Inverted Bucket Steam Trap (for use with Universal Connectors)

Universal Connector and Traps Steam Traps

The trap contains an inverted bucket mechanism which responds to the difference in density between steam and condensate. The discharge action is cyclic. Condensate and non-condensibles are discharged close to steam temperature. The UIB is designed to maintain the bucket in the proper plane by means of a swivel connector. The trap is easily replaced without disturbing the piping connections.

<b>Model</b>	UIB30, UIB30H
<b>Trap Construction</b>	Stainless Steel
<b>Connector Sizes</b>	1/2", 3/4", 1"
<b>Connector Connections</b>	NPT, SW
<b>Connector Construction</b>	Straight or strainer type (left or right hand)
<b>Connector Construction</b>	Stainless steel or cast steel
<b>Connector Options</b>	SW connections to ANSI B16.11
<b>Options</b>	Carbon steel USTSII trap station

## Sample Specification

Steam trap shall be supplied with a pipeline connector which, once installed, remains in the pipeline permanently. Trap shall be attached to the connector by two bolts to enable simple and rapid installation and replacement. The connection is designed to allow installation on pipework that is vertical, horizontal, or any angle in between. The trap itself shall be inverted bucket type of all-stainless steel construction which resists distortion due to freeze-up and waterhammer. Trap to have a forged body and drawn cover fully weld-sealed against leakage. Operation shall be self-priming, with orifice size selected for the capacity required by the application, and suitable for working pressures to 435 psig.

## Installation

The connector can be installed in horizontal or vertical lines. The connector face must be in a vertical plane. The trap should be fitted to the connector with the body pointing downward. Full-port isolating valves should be installed upstream and downstream of the connector.

## Maintenance

The trap can be removed for repair or replacement without disturbing the connector piping connections. Complete isolation of the connector from both the supply and return lines is required before the trap is removed. **Complete installation and maintenance instructions are given in the IMI sheet, which accompanies the product.**

### Description

The USM21 and USM32 is a pre-set and maintenance free sealed bimetallic steam trap manufactured in stainless steel. It is designed for applications such as steam tracing and main drips. When installed in any position with a suitable connector the USM21 or USM32 can easily and simply be removed without breaking in the pipeline, thus speeding up trap replacement with minimal system downtime.

### Materials

No. Part	Material

## Sealed Bimetallic Steam Trap (for use with Universal Connectors)

### Pressure Shell Design Conditions

#### USM21

PMA Max allowable pressure	725 psig @ 104°F (50 barg @ 40°C)
TMA Max allowable temperature	842°F @ 420 psig (400°C @ 29 barg)

#### USM32

PMA Max allowable pressure	719 psig @ 100°F (49.6 barg @ 38°C)
TMA Max allowable temperature	842°F @ 418 psig (450°C @ 28.8 barg)

### Sample Specification

Steam trap shall be a sealed stainless steel bimetallic thermostatic USM21 or USM32 type manufactured in stainless steel and be suitable for operating pressures up to 300 psig(21 barg). The traps to be zero maintenance and to be connected to separate pipeline connectors or universal trap station, by two screws for quick and simple installation/ replacement. The thermostatic element has 4 operating ranges and will discharge condensate at 18, 54,90 and 126 deg F blow steam temperature depending on you choice of range. Trap can be installed in any plane.

### Installation

The connector can be installed in horizontal or vertical pipeline. The trap station USTS II in horizontal pipeline. The connector face must be in a vertical plane. The trap shall be fitted to the connector or trap station with 2 bolts with a torque of 22-26 FT-LB. Full port isolation valves should be installed upstream and down stream of the trap connector unit.

### Maintenance

Trap must be isolated and cooled before performing any work. There are no internal parts, which can be serviced. Trap module will be completely replaced if it is determined to be failed. 9/16" socket will remove bolts to allow for remove of the trap module. Make sure gasket surface on connector is clean and replace with a new module. Torque to 22-26 FT-LB. Apply steam and check for proper operation and any steam leaks. Complete Installation and maintenance instruction are given on the IM-P625-03, which accompanies the product.

Connector Size	A Straight Connector	A Strainer Connector	A USTS II
1/2"	4.1"	4.1"	3.7"
3/4"	4.1"	4.1"	3.7"
1"	4.5	4.5	N/A
all	B	C	WEIGHT TRAP ONLY
all	1.6"	2.7"	1.3 lb

### Spare parts

The USM21 and the USM32 are sealed non-maintainable trap units. No internal spares are available. The spares which are available are shown in heavy outline. Parts shown in a broken line are not available as spares.

#### Available spares: USM21 and USM32

Connector screws (2 off)	<b>11</b>
Complete trap unit inclusive of gaskets (9 and 10) and connector screws (11)	

**Note:** The gaskets contain sharp metal reinforcement, please handle with care.

#### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state if ordering a complete trap the nominal operating temperature of the steam trap.

**Example:** Connector screws for a USM21 sealed bimetallic steam trap.

## PC and PC 1 Pipeline Connectors

Universal Connector and Traps  
Steam Traps

### es r to

The PC3000 range of pipeline connectors are designed for use with two bolt universal swivel connector steam traps. Incorporating one integral piston stop valve it is possible to isolate upstream of the steam trap and through the use of the fitted depressurization valve, also possible to depressurize it. The trap depressurization port also incorporates a maintainable 40 mesh stainless steel strainer screen to provide trap protection from system dirt and debris. The PC3001 is also fitted with a line drainage valve upstream of the isolation valve.

Available to left to right (shown) or right to left	PC	1 x Piston isolation valves with 1 x Upstream trap vent valve	
	PC 1	1 x Piston isolation valves with 1 x Upstream trap vent valve and 1 x Line drain valve	

For available options to the pipeline connections detailed within this Technical Information sheet please reference TI-F01-37.  
 Note Units are also available without vent/drain ports. These are known as the PC - See Technical Information sheet TI-P128-02.  
 Standards - These products fully comply with the requirements of the European Pressure Equipment Directive 97/23/EC.  
 Certification - These products are available with certification to EN 10204 3.1. Note All certification/inspection requirements must be stated at the time of order placement. For other certification contact Spirax Sarco.

### es a e o e t o s

1/2" and 3/4" condensate inlet / outlet connections are available with screwed NPT (or optional BSP) and as a socket weld connection to ASME B16.11 class 3000. Drainage and venting connections have an M18 thread as standard.  
 Flanged versions are also available upon request. Please contact Spirax Sarco for further details.

*Local regulation may restrict the use of this product below the conditions quoted.  
 Limiting conditions refer to standard connections only.*

## Pressure / temperature limits (ISO 6552)

PC3000

PC3001

The product should not be used in this region or beyond the parameter of the PMA or TMA of the relative end connection - See notes below.

Body design condition		ASME 600
PMA	Maximum allowable pressure	99.3 bar g @ 38 C / 1440 psi g @ 100 F
TMA	Maximum allowable temperature	425 C @ 56 bar g / 797 F @ 812 psi g
	Minimum allowable temperature	-40 C / -40 F
PMO	Maximum operating pressure for saturated steam service	62 bar g @ 279 C / 899 psi g @ 534 F
TMO	Maximum operating temperature	425 C @ 56 bar g / 797 F @ 812 psi g
	Minimum operating temperature	-40 C / -40 F
Designed for a maximum cold hydraulic test pressure of: 150 bar g		2175 psi g

### Notes

- 1 If flange connections are fitted then these will limit the maximum and minimum design conditions of the pipeline connector.
- 2 The maximum operating limits of the complete assembly will be dictated by the steam trap of choice. Reference the specific steam trap technical information sheet for its 'Pressure/temperature limits'.

### Weights (approximate)

Size	C	F	G	N	Weight

afet for ato stallato a a te a e

For full details see the Installation and Maintenance Instructions (IM-P128-35) supplied with the product.

Ge eral for ato

There are two criteria which must be satisfied to ensure that the swivel connector trap will operate correctly and ensure effective condensate removal:

- 1 The PC3000 and PC3001 shall be installed with flow in the direction of the arrow. Flow can be horizontal (left to right or right to left), vertical or inclined.
- 2 The connection face for the swivel connector steam trap must be in the vertical plane unless stated on relevant steam trap Installation and Maintenance Instructions.

After installation it is recommended that the pipeline connector is insulated to minimize radiated heat losses and to protect personnel from burns risk.

e ress r ato a l e ra a e

The overall assembly is supplied fitted with valve(s) which allow depressurization and line drainage (PC3001 only) of the system to enable safe removal and maintenance of the steam trap. Consideration must be given to the position of the discharge which should be directed or piped to a safe place where it will not injure personnel or damage equipment.

s osal

This product is recyclable. No ecological hazard is anticipated with the disposal of this product, providing due care is taken.

## PC and PC 1 Pipeline Connectors

Steam Traps

Universal Connector and Traps

### Features

The PC4000 range of pipeline connectors are a complete 'Trap valve station' developed for use with two bolt universal swivel connector steam traps.

As the unit has been designed with two integral piston stop valves, it is possible to isolate both upstream and downstream of the universal trap connection and through the use of the fitted depressurization valves, possible to depressurize, test and drain the pipeline. The trap depressurization port also incorporates a maintainable 40 mesh stainless steel strainer screen to provide trap protection from system dirt and debris, which can be cleared through the use of the line pressure.

Available to the left or right	PC	2 x Piston isolation valves with 1 x Upstream trap depressurization valve and 1 x Downstream trap depressurization valve	
	PC 1	2 x Piston isolation valves with 1 x Upstream trap depressurization valve and 1 x Downstream trap depressurization valve and 1 x Line drain valve	

For availability to the pipeline connections detailed within this Technical Information sheet please reference TI-F01-37.

Note Units are also available without vent/drain ports. These are known as the PC - See Technical Information sheet TI-P128-03.

Standards - These products fully comply with the requirements of the European Pressure Equipment Directive 97/23/EC.

Certification - These products are available with certification to EN 10204 3.1. Note All certification/inspection requirements must be stated at the time of order placement. For other certification contact Spirax Sarco.

### Accessories

1/2" and 3/4" condensate inlet / outlet connections are available with screwed NPT (or optional BSP) and as a socket weld connection to ASME B16.11 class 3000. Drainage and venting connections have an M18 thread as standard.

Flanged versions are also available upon request. Please contact Spirax Sarco for further details.

*Local regulation may restrict the use of this product below the conditions quoted.  
Limiting conditions refer to standard connections only.*

## Pressure / temperature limits (ISO 6552)

PC4000

PC4001

Body design condition		ASME 600
PMA	Maximum allowable pressure	99.3 bar g @ 38°C / 1440 psi g @ 100°F
TMA	Maximum allowable temperature	425°C @ 56 bar g / 797°F @ 812 psi g
Minimum allowable temperature		-40°C / -40°F
PMO	Maximum operating pressure for saturated steam service	62 bar g @ 279°C / 899 psi g @ 534°F
TMO	Maximum operating temperature	425°C @ 56 bar g / 797°F @ 812 psi g
Minimum operating temperature		-40°C / -40°F
Designed for a maximum cold hydraulic test pressure of:		150 bar g / 2175 psi g

### Notes

- 1 If flange connections are fitted then these will limit the maximum and minimum design conditions of the pipeline connector.
- 2 The maximum operating limits of the complete assembly will be dictated by the steam trap of choice. Reference the specific steam trap technical information sheet for its 'Pressure/temperature limits'.

### Dimensions (mm)

Units	C	F	G	N	e t
mm (in)	1.4 (36)	4.9 (125)	1 (25)	2 (50)	1.4 (35)
					3.5 (90)
					3.9 (99)
					4.53 (115)
					1.97 (50)
					7.9 lbs (3.6 kg)

### How to order

1 off 1/2" Spirax Sarco PC4000 pipeline connector having right to left flow and socket weld end connections to ASME B 16.11 Class 3000.

# PC a PC 1 P el e Co e tors

afet for ato stallat o a a te a e

For full details see the Installation and Maintenance Instructions (IM-P128-35) supplied with the product.

Ge eral for ato

There are two criteria which must be satisfied to ensure that the swivel connector trap will operate correctly and ensure effective condensate removal:

1. The PC4000 and PC4001 shall be installed with flow in the direction of the arrow. Flow can be horizontal (left to right or right to left), vertical or inclined.
2. The connection face for the swivel connector steam trap must be in the vertical plane unless stated on relevant steam trap Installation and Maintenance Instructions.

After installation it is recommended that the pipeline connector is insulated to minimize radiated heat losses and to protect personnel from burns risk.

e ress r ato a l e ra a e

The overall assembly is supplied fitted with valves which allow depressurization and line drainage (PC4001 only) of the system to enable safe removal and maintenance of the steam trap. Consideration must be given to the position of the discharge which should be directed or piped to a safe place where it will not injure personnel or damage equipment.

s osal

This product is recyclable. No ecological hazard is anticipated with the disposal of this product, providing due care is taken.

are arts

The spare parts available are shown in heavy outline. Parts drawn in broken line are not supplied as spares. For ease of replacement an extractor tool is available for removing the sealing rings.

Thermo-Dynamic®  
Steam Traps

## Installation

The preferred installation is in the horizontal position as close as possible to equipment being drained. Install strainer (20 mesh) upstream and full port isolating valves upstream and downstream of trap. Piping to and from the trap should be at least equal to or one size larger than trap connection. Do not weld pipe connection to trap. Body material is not suitable for welding. For freeze resistant installations, all drains must be pitched toward the trap for gravity flow. Trap must be installed vertically, discharging downward. Discharge piping must be self-draining.

## Spare Parts

Disc	3
Cap Assembly	1

## Sample Specification

Steam trap shall be all stainless steel thermo-Dynamic® disc type with connections on a common center line, which will operate in any position. Integral seat design with hardened disc and seating surfaces. Trap to have integral insulating cap.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation of the trap from both supply and return line is required before any servicing is performed.

The trap should be disassembled periodically for inspection and cleaning of the disc and seat.

The only wearing parts of the trap are the disc and seat rings, which should be inspected and cleaned periodically. Slight wear can often be corrected by resurfacing on a lapping plate.

**Caution: Only perform maintenance after trap has been isolated.**

Complete installation and maintenance instructions are given in IM-2-516-US, which accompanies the product.

1"	2.3 58	3.8 96	3.3 85	5.1 130	.79 20	3.85 1.75	- -	

## Options

**Blowdown Valve** – When the blowdown valve is opened, loose material collected by the strainer is blown to atmosphere. Because a wrench is used to open the valve, the operator is clear of the blowdown stream.

## Sample Specification

Steam trap shall be stainless steel thermodynamic type, integral seat design with hardened disc and seating surfaces, and oxidation resistant (ENP) finish. Trap to contain inlet Y strainer, and when required, shall be provided with integral blowdown valve and insulating cover.

## Installation

The trap will operate in any position, but the preferred installation is in a horizontal pipe. Full-port isolating valves should be installed upstream and downstream of the trap.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation of the trap from both supply and return line is required before any servicing is performed.

Although occasional operation of the optional blowdown valve will remove most of the accumulated debris, the trap should be disassembled periodically for cleaning of the strainer screen and inspection and cleaning of the disc and seat.

The only wearing parts of the trap are the disc and seat ring. A worn disc can be replaced, and slight seat ring wear can often be corrected by resurfacing on a lapping plate.

**Complete installation and maintenance instructions are given in an IMI Sheet, available upon request.**

Steam Traps

Thermo-Dynamic®

to ale tra  
1 te ral low ow valve  
See spare parts for details on how to order;  
Alternatively please specify at the time of  
order placement.

## es r to

The TDC46M is a carbon steel, thermodynamic steam trap that has been specifically designed for low capacity applications up to 667 psig (46 barg) (where pipe connections permit). As standard the unit is available with either screwed, socket weld or flanged connections.

### C e ef ts

- Integral strainer.
- Integral air vent.
- Insulation cap.
- Replaceable seat for ease of maintenance.

### to ale tras

At extra cost a 1 integral blowdown valve can be pre-fitted to the strainer cap, please specify at the time of order placement.

### ta ar s

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC.

### Cert f at o

These products are available with certification to EN 10204 3.1. Note All certification / inspection requirements must be specified at the time of order placement.

## esa e o eto s

1/2", 3/4" and 1" screwed BSP or NPT.

1/2", 3/4" and 1" socket weld ends to BS 3799 Class 3000 lb.

1/2", 3/4" and 1" integrally flanged EN 1092 PN40, PN100 and ASME class 150, ASME class 300 or ASME class 600 optional EN1092 PN40 and PN100).

order placement.

## es r to

The TDS46M is a stainless steel, thermodynamic steam trap that has been specifically designed for low capacity applications up to 667 psig (46 bar g) (where pipe connections permit). As standard the unit is available with either screwed, socket weld or flanged connections.

## e ef ts

- Integral strainer.
- Integral air vent.
- Insulation cap.
- Replaceable seat for ease of maintenance.

## to ale tras

At extra cost a 1 integral blowdown valve can be pre-fitted to the strainer cap, please specify at the time of order placement.

## ta ar s

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC.

## Cert f at o

These products are available with certification to EN 10204 3.1. Note: All certification / inspection requirements must be specified at the time of order placement.

## TD62LM and TD62M Thermodynamic Steam Trap with replaceable seats

Steam Traps

Thermo-Dynamic®

### Description

The TD62LM and TD62M are maintainable high pressure thermodynamic steam traps with integral strainer and a replaceable seat to ease maintenance. They have been specifically designed for mains drainage applications up to 62 barg. The TD62LM is specifically designed for relatively small condensate loads on superheat and mains drainage applications. An insulating cover is fitted as standard to prevent the trap being unduly influenced by excessive heat loss when subjected to low outside temperatures, wind, rain etc.

Model	TD62LM and TD62M
<b>PMO</b>	900 psig
<b>Sizes</b>	1/2", 3/4", 1"
<b>Connections</b>	SW to ANSI B16.11 Class 3000
<b>Construction</b>	Alloy Steel
<b>Options</b>	NPT Connections ANSI 600 Flanged Blowdown Valve (SW and NPT only)

### Operating Range (SW Connection Only)

The product must not be used in this region

\* PMO — Max. operating pressure recommended  
PMOB — Max. operating back pressure 80% of upstream pressure

### Limiting Conditions

**Body design conditions ANSI 600**

<b>PMA</b> — Max. allowable pressure	1500 psig 103 barg
<b>TMA</b> — Max. allowable temperature	977°F 525°C
Cold hydraulic test pressure	2250 psig 155 barg

#### TD62LM

Minimum pressure for satisfactory operation is 120 psig, 8 barg.  
Maximum back pressure should not exceed 50% of the inlet pressure under any conditions of operation, otherwise the trap may not shut.

#### TD62M

Minimum pressure for satisfactory operation is 20 psig, 1.4 barg.  
Maximum back pressure should not exceed 80% of the inlet pressure under any conditions of operation, otherwise the trap may not shut.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

## Sample Specification

Spirax Sarco TD62M ThermoDynamic® steam trap, available in sizes 1/2", 3/4", and 1" socket weld connections to ANSI B16.11 Class 3000 (or NPT or ANSI 300 or 600 flanged connections). Alloy steel construction, suitable for operation from 20 to 900 psig at a maximum operating temperature of 842°F. An integral strainer and insulating cover are standard. Traps to have replacement seats and disc.

## Installation

The preferred trap installation is in a horizontal pipe with the insulcap up. After 24 hours in service the cover nuts should be checked for tightness and if necessary torqued to 33-37 ft•lb. Full-port isolating valves should be installed upstream and downstream of the trap.

## Spare Parts

### Socket Weld / NPT

### Flanged

## Spare Parts

The spare parts available are shown in solid outline. Parts shown in broken line are not supplied as spares.

## Available spares

Insulating cover	5
Set of cover studs and nuts (set of 8) on FCC	4 on other 8, 8A, 9
Seat and disc assembly	6, 7, 10, 13, 14, 15
Strainer screen 100 mesh	4
Cover gasket (packet of 3 sets) Flanged	10,13,14
Set of gaskets (packet of 3 sets) SW, NPT	10,12,13,14

## How to order spares

Always order spares by using the description given in the column headed "Available spares" and state the size and type of trap.

**Example:** 1- Strainer screen for a Spirax Sarco 1" TD62LM thermodynamic steam trap (ASTM body)

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation of the trap from both supply and return line is required before any servicing is performed.

The trap should be disassembled periodically for cleaning of the strainer screen and inspection and cleaning of the disc and seat.

**Complete installation and maintenance instructions are given in the IMI Sheet, which accompanies the product. (IM-P068-58)**

TI-2-525-US 3.14

# TD120M High Pressure Thermo-Dynamic® Steam Trap with Replaceable Seat

**Dimensions** (nominal) in inches and millimeters

Size	Dimensions (nominal) in inches and millimeters					Weight
DN	A	B	E	F	G	
1/2"	3.1	6.2	2.2	2.2	3.1	23.1 lb
15	78	158	55	55	78	10.5 kg
3/4"	3.2	6.2	2.2	2.2	3.2	23.1 lb
20	80	158	55	55	80	10.5 kg
1"	3.2	6.2	2.2	2.2	3.2	23.1 lb
25	80	158	55	55	80	10.5 kg

## Sample Specification

High pressure Thermo-Dynamic® steam trap with socket weld ends as standard. Trap to be inline maintainable with complete replacement of operating internals. The trap is constructed with alloy steel, suitable for operation from 116 psig to 3,190 psig. Trap comes standard with sinter stainless fine strainer.

## Installation

Install in a horizontal pipeline with the nameplate on top. After 24 hours in service, the cover nuts should be checked for tightness. Full-port isolating valves should be installed upstream and downstream of the trap.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation of the trap from both supply and return line is required before any servicing is performed.

The trap should be disassembled periodically for inspection and cleaning of the disc and seat.

Complete installation and maintenance instructions are given in IM-P150-12.

## Spare Parts

## Spare parts

The spare parts available are shown in solid outline. Parts drawn in broken line are not supplied as spares.

### Available spares

Set of cover studs and nuts	8 (8 off), 9 (8 off)
Strainer screen and gasket	4, 11
Set of gaskets	7 (2 off), 10, 11
Maintenance kit	2, 4, 7 (2 off), 10, 11, 6+12

### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the size and type of trap. **Example:** 1 - Seat and disc assembly for a Spirax Sarco 1/2" TD120M high pressure thermodynamic steam trap.

# spirax sarco

## Cast Iron Float & Thermostatic Steam Traps FT-15, FT-30, FT-75, FT-125

Steam Traps  
Float & Thermostatic

The trap contains a float valve mechanism which modulates to discharge condensate continuously at steam temperature, while non-condensable gases are released by a separate internal balanced pressure thermostatic air vent.

Model	FT-15	FT-30	FT-75	FT-125

### Sample Specification

Steam traps shall be of the mechanical ball float type having cast iron bodies, NPT connections, and all stainless steel internals. Incorporated into the trap body shall be a stainless steel balanced pressure thermostatic air vent capable of withstanding up to 450°F(25°C) and resisting waterhammer without sustaining damage. Internals of the trap shall be completely servicable without disturbing the piping.

### Installation

A pipeline strainer should be installed ahead of any steam trap. Full port isolating valves should be placed to permit servicing. The trap should be installed below the drainage point of the equipment with a collecting leg before the trap, in a position so that the float arm is in a horizontal plane so that the float rises and falls vertically, and with the direction of flow as indicated on the body. Refer to IM-2-300 for complete instructions.

### Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation from both supply and return line is required before any servicing is performed. The trap should be disassembled periodically for inspection and cleaning of the valve head and seat, operating mechanism and air vent.

Worn or damaged parts should be replaced using a complete valve mechanism assembly and/or air vent assembly. **Complete installation and maintenance instructions are given in IM-2-300, which accompanies the product.**

## Cast/Ductile Iron Float & Thermostatic Steam Trap FT14, IFT14 and FT14C

Steam Traps

Float & Thermostatic

The trap contains a float valve mechanism which modulates to discharge condensate continuously at steam temperature, while non-condensable gases are released by a separate internal balanced pressure thermostatic air vent.

### Typical Applications

All process equipment, particularly when controlled by modulating temperature control valves; also for unit heaters, air heating coils, heat exchangers and steam main drip stations

### Capacities: see TIS 2.306

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

# Cast/Ductile Iron Float & Thermostatic Steam Trap FT14, IFT14 and FT14C

## Limiting Operating Conditions

Max operating pressure (PMO) 65 psig (4.5 barg)  
IFT14-4.5 ,FT14-4.5,FT14C-4.5

Max operating pressure (PMO) 145 psig (10 barg)  
IFT14-10, FT14-10, FT14C-10

Max operating pressure (PMO) 200 psig (14 barg)  
IFT14-14 ,FT14-14, FT14C-14

Max operating temperature (TMO) 482°F(250°C) @ 188 psig (13 barg)  
IFT14 1/2", 3/4" FT14C  
392°F (200°C) @ 200 psig (14 barg)

Max operating temperature (TMO) 482°F(250°C) @ 200 psig (14 barg)  
1" FT14HC

Max operating temperature (TMO) 428°F(220°C) @ 195 psig (13.5 barg)  
1-1/2", 2" FT14  
392°F (200°C) @ 200 psig (14 barg)

Minimum allowable temperature 14°F (-10°C)  
All IFT, FT14, FT14C

## Sample Specification

Steam traps shall be of the mechanical ball float type having iron bodies, horizontal line connections, and all stainless steel internals. Incorporated into the trap body shall be a stainless steel balanced pressure thermostatic air vent capable of withstanding 45°F(25°C) of superheat and resisting waterhammer without sustaining damage. Internals of the trap shall be completely servicable without disturbing the piping. (Optional: The trap shall include an adjustable steam lock release unit.) 14C version.

## Installation

A pipeline strainer should be installed ahead of any steam trap. Full port isolating valves should be placed to permit servicing. The trap should be installed below the drainage point of the equipment with a collecting leg before the trap, in a position so that the float arm is in a horizontal plane and the float rises and falls vertically, with the flow direction as indicated on the body. (The 1/2" and 3/4" FT14 only trap is supplied with right-to-left flow. If left-to-right or vertical flows are required, cover can be rotated as desired.) Refer to IMI 2.300 or IM-FO1-30 for IFT for complete instructions.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation from both supply and return line is required before any servicing is performed. The trap should be disassembled periodically for inspection and cleaning of the valve head and seat, operating mechanism and air vent. Worn or damaged parts should be replaced using a complete valve mechanism assembly and/or air vent assembly. Complete installation and maintenance instructions are given in IMI 2.300, or IM-FO1-30 for IFT which accompanies the product.

# spirax sarco

## Mod. 2000 Self Drainage Unit For Float & Thermostatic Trap to prevent freeze up

Steam Traps  
Float & Thermostatic

The drainage device is to be used on the bottom drain connection on F&T steam traps or drain traps in outdoor installations where freezing may occur. When the pressure drops below 3 psig the device opens to completely drain the trap body. The unit will close at pressures above 3 psig.

Model	Mod.2000
PMO	464 psig (32 barg)
Size	3/8"
Connections	NPT
Construction	Tamperproof stainless steel

### Construction Materials

No.	Part	Material
1	Sleeve	Stainless Steel
2	Body with integral seat	
3	Ball valve	
4	Spring	

### Pressure Ratings

Max Allowable Pressure (PMA)	464 psig (32 barg)
Max Allowable Temperature (TMA)	482°F (250°C)
Max Operating Pressure (PMO)	464 psig (32 barg)
Max Operating Temperature (TMO)	482°F (250°C)
Minimum Closer Pressure	3.6 psig (.25 barg)
Opening pressure	3 psig (0.2 barg)

Float & Thermostatic style steam trap with Mod. 2000 drainage device

### Installation

Thread the Mod. 2000 into the drain connection on the bottom of the F&T trap. Most, but not all, have 3/8" connections. Bush down to 3/8" NPT if connection on the trap is larger. This device will automatically open and drain when the steam trap pressure drops below 3 psig; so, it should not drain in an area where it could dump hot condensate onto personnel. If the trap is where drainage may cause a danger, an open funnel drain with a 1" air gap should be placed under the Mod.2000 to drain condensate to a safe place. Reference IM-2-323-US.

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

# Cast Steel Float & Thermostatic Steam Traps FTB Super Capacity Series

## Installation

A pipeline strainer should be installed ahead of any steam trap. Full-port isolating valves should be placed to permit servicing. The trap should be installed below the drainage point of the equipment with a collecting leg before the trap, in a position with the float arm in a horizontal plane so that the float rises and falls vertically, and with the direction of flow as indicated on the cover. Refer to IMI 2.300 for complete instructions.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation from both supply and return line is required before any servicing is performed.

The trap should be disassembled periodically for inspection and cleaning of the valve head and seat, and operating mechanism.

Worn or damaged parts should be replaced using a complete valve mechanism assembly and/or air vent assembly.

**Complete installation and maintenance instructions are given in IMI 2.300, which accompanies the product.**

## Sample Specification

Steam traps shall be of the mechanical float type having cast steel bodies, NPT or SW connections, and stainless steel valve heads and seats. Incorporated into the trap body shall be a stainless steel balanced pressure thermostatic air vent capable of withstanding 572°F operating temperature and resisting waterhammer without sustaining damage. Internals of the trap shall be completely servicable without disturbing the piping. Trap tested in accordance to ANSI / FCI 85-1. Capacity data obtained in accordance to PTC 39.1.

### Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation from both supply and return line is required before any servicing is performed. The trap should be disassembled periodically for inspection and cleaning of the valve head and seat, operating mechanism and air vent.

Worn or damaged parts should be replaced using a complete valve mechanism assembly and/or air vent assembly.

Complete installation and maintenance instructions are given in IMI 2.300, which accompanies the product.

### Sample Specification

Steam traps shall be of the mechanical ball float type having steel bodies, horizontal line connections, and stainless steel valve heads, seats and ball floats. Incorporated into the trap body shall be a stainless steel balanced pressure thermostatic air vent capable of withstanding 45°F(25°C) of superheat and resisting waterhammer without sustaining damage. Internals of the trap shall be completely servicable without disturbing the piping.

### Installation

A pipeline strainer should be installed ahead of any steam trap. Full port isolating valves should be placed to permit servicing. The trap should be installed below the drainage point of the equipment with a collecting leg before the trap, in a position so that the float arm is in a horizontal plane and the float rises and falls vertically, with the flow direction as indicated on the body. Refer to IMI 2.300 for complete instructions.

### Spare Parts

Valve Mechanism Kit w/ Float (3/4" & 1")	A,B,C,D,E,F,G
Valve Mech. Kit (1-1/2" & 2")	A,B,D,P
Air Vent Kit (PMO up to 21 bar)	H,J,L,M,N
Air Vent Kit (PMO 32 bar)	H,K
Gasket Kit (3 of each)	B,K,T
Ball Float (1-1/2" & 2")	C

The erosion deflector is pressed into the body during manufacture and not available as a spare.

## Cast Steel Float & Thermostatic Steam Trap 3" and 4" FT450

Steam Traps  
Float & Thermostatic

The trap contains a float valve mechanism which modulates to discharge condensate continuously at steam temperature, while non-condensable gases are released by a separate internal thermostatic air vent.

<b>Model</b>	FT450	
<b>PMO</b>	450 psig	
<b>Sizes</b>	3"	4"
<b>Connections</b>	NPT, SW, Flanged	Flanged
<b>Construction</b>	Carbon Steel Body Stainless Steel Internals	

### Typical Applications

- Reboilers, heat exchangers and other large process equipment
- Large absorption chillers
- In combination with the Spirax Sarco 4" Pressure Powered Pump™

### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC, and carries the CE mark when so required.

### Certification

This product is available with certification to EN 10204 3.1. Designed in accordance with ASME VIII Div 1. **Note:** All certification/inspection requirements must be stated at the time of order placement.

3" NPT/SW

### Construction Materials

No.	Part	Material
1	Body	Cast Carbon Steel ASTM A216 WCB

375 psig/750°F 26 barg/400°C

### TMA

Max. allowable temperature 750°F/0-375 psig 400°C/0-26 barg

# Cast Steel Float & Thermostatic Steam Trap

## 3" and 4" FT450

### Dimensions (nominal)

### Sample Specification

Steam traps shall be of the mechanical ball float type having cast steel bodies with stainless steel internal parts. The piping connections shall be horizontal in-line, and the body shall incorporate mounting legs with drilled pads. The traps shall have an integral thermostatic air vent. The trap body shall be horizontally split and all internal parts shall be completely serviceable without disturbing the inlet and outlet piping.

### Installation

The trap should be located below and close to the equipment drain point. A pipe-line strainer should be installed ahead of the trap, and full port isolating valves should be placed to permit servicing. The mounting legs should be bolted to a firm horizontal support. Access above the trap must be provided for servicing. Complete installation instructions are given in IMI 2.3041.

### Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation from both supply and return line is required before any servicing is performed.

The trap should be disassembled periodically for inspection and cleaning of the valve mechanism and air vent.

Complete installation and maintenance instructions are given in IMI 2.3041, which accompanies the product.

### Spare Parts

Valve Mechanism Kit	D, E, F
Gasket Kit (pkt of 3 each)	B, K

## FTC80FB Cast Steel 1½" and 2" Ball Float Steam Trap

Steam Traps

Float &  
Thermostatic

2" FTC80FBSW (R-L) shown

### Description

As standard, the FTC80FB ball float steam trap is supplied with a right to left (R-L) flow configuration having horizontal connections and has provision for adding an air venting option; Please note that the unit is supplied with a ¾" socket weld connection in the cover with a plug screwed into the fitting. It has been designed for floor mounting and is suitable for most high-pressure process and drainage applications. Its simple robust ball float mechanism ensures excellent resistance to waterhammer. All internals are easily accessible for in-line maintenance and a drain port allows full body drainage. It has a large maintainable strainer screen that extends service intervals and is located in an accessible flanged chamber.

---

Factory fitted internal fixed bleed for continuous discharge of air and other incondensable gasses

---

**Note:** As standard the unit is supplied with a ¾" socket weld connection in the cover with a ⅝" BSP screwed plug fitted.

### Standard

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC.

### Certification

This product is available with certification to EN 10204 3.1 for the body, cover, fasteners, and screen flange.

**Note:** All certification / inspection requirements must be stated at the time of order placement.

### Sizes and pipe connections

1½" and 2" ASME (ANSI) B 16.11 Class 6000 socket weld.

1½" and 2" ASME (ANSI) B 16.5 Class 600 flanges.

**Note:** Other connections are available upon request but may limit the operating range – Please consult Spirax Sarco for further information.

Drain plug connection is ⅝" screwed NPT as standard.

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.*

*In the interests of development and improvement of the product, we reserve the right to change the specification.*

## Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P179-06) supplied with the product.

### Installation note:

The FTC80FB must be installed with the direction of flow as indicated on the body, and with the float arm in a horizontal plain so that it rises and falls vertically. Integral legs assist stable floor mounting. Please note that appropriate high temperature jointing compound must be used on the drain plug and air vent plug threads.

### Disposal

This product is recyclable. No ecological hazard is anticipated with the disposal of this product providing due care is taken.

### How to order

**Example:** 1 off Spirax Sarco 1½" FTC80FB-45 (R-L) ball float steam trap with ASME Class 6000 weld connections complete with 3.1 certification for the FTC80FB.

TI-P179-02-US 12.10

### Sample Specification

Steam traps shall be of the mechanical ball float type having stainless steel bodies and forged steel covers, NPT connections, and all stainless steel valve heads and seats. Incorporated into the trap body shall be a stainless steel balanced pressure thermostatic air vent capable of withstanding 572°F temperature and resisting waterhammer without sustaining damage. Internals of the trap shall be completely servicable without disturbing the piping.

### Installation

A pipeline strainer should be installed ahead of any steam trap. Full port isolating valves should be placed to permit servicing. The trap should be installed below the drainage point of the equipment with a collecting leg before the trap, in a position so that the float arm is in a horizontal plane and the float rises and falls vertically, with the flow direction as indicated on the cover. Refer to IMI 2.300 for complete instructions.

### Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation from both supply and return line is required before any servicing is performed.

The trap should be disassembled periodically for inspection and cleaning of the valve head and seat, operating mechanism and air vent.

Worn or damaged parts should be replaced using a complete valve mechanism assembly and/or air vent assembly.

**Complete installation and maintenance instructions are given in IMI 2.300, which accompanies the product.**

2" 50	9.0 230	5.5 141	4.8 123	12.9 332	7.9 200	94.8 lb 43 kg

NOTE: Flanges drilled and tapped

## Installation

The trap must be fitted with the direction of flow as indicated on the body, and with the float arm in a horizontal plane so that it rises and falls vertically. Full-flow isolating valves should be installed upstream and downstream of the trap.

## Sample Specification

Float & Thermostatic traps for pharmaceutical sterile areas on plant or clean steam service shall have 316L stainless steel bodies and covers, and all internals, including float, main valve, head/seat, thermostatic air vent and air vent head/seat, shall be stainless steel. Connections shall be in-line horizontal. ANSI flanged Spirax Sarco Model FT 46.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation from both supply and return line is required before any servicing is performed.

The trap should be disassembled periodically for inspection and cleaning of the valve head and seat, operating mechanism and air vent.

Worn or damaged parts should be replaced using a complete main valve assembly and/or air vent assembly.

**Complete installation and maintenance instructions are given in the IMI sheet, which accompanies the product.**

## FTS14

### Austenitic Stainless Steel Float & Thermostatic Steam Trap

Steam Traps  
Float & Thermostatic

#### Description

The FTS14 is an austenitic stainless steel float and thermostatic steam trap with an integral automatic air vent. It provides efficient condensate drainage and prompt air removal to ensure process equipment operates to its maximum potential. As standard the FTS14 has horizontal connections with flow from right to left (R-L). However its unique design allows the cover to be simply rotated to provide horizontal left to right (L-R) and vertical up or vertical down configurations.

#### Sizes and pipe connections

1/2", 3/4" and 1"	NPT (ANSI B 1.20.1) Socket weld ends to ANSI B 16.11,
DN15, 20 and 25	Flanged ends to ANSI B 16.5 Class 150 and 300 (Special Order)
1/2", 3/4" and 1"	Hygienic/sanitary clamp ends (Special Order)

**Note: For alternative connections please consult Spirax Sarco.**

#### Optional extras

Internal strainer (FTS14X). A manually adjustable needle valve can be added for use as a steam lock release mechanism (FTS14-C).  
**Note: All options are available at extra cost and are Special Order.**

#### Limiting conditions (ISO 6552)

Body design conditions	PN25
PMA - Maximum allowable pressure	362 psig 25 barg
TMA - Maximum allowable temperature	572°F 300°C
TMO - Maximum operating temperature	437°F 225°C
Minimum operating temperature	-4°F -20°C

**Note: For lower operating temperatures consult Spirax Sarco.**  
Designed for a maximum cold hydraulic test pressure of 544 psig 37.5 barg

#### Operating range

■ The product must not be used in this region.  
■ The product should not be used in this region as damage to the internals may occur.  
\*PMO Maximum operating pressure for steam service.  
A - B Flanged ANSI 300, screwed and socket weld.  
A - C Flanged ANSI 150.  
**Note:** For hygienic/sanitary clamp ends the maximum pressure and/or temperature may be restricted by the gasket or clamp used.

#### ΔPMX - Max. Differential Pressure

FTS14 - 4.5	FTS14-10	FTS14-14
65 psig	150 psig	200 psig
4.5 bar	10 bar	14 bar

#### Certification

This product is available with certification to EN 10204 3.1.B  
**Note:** All certification/inspection requirements must be stated at the time of order placement.

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.*

### Flanged DN25

### Flanged DN15, 20 and FTS14-C

## Capacities

Note. Capacities shown are based on discharge at saturation temperature. When discharging sub-cooled condensate the air vent provides extra capacity. Under start-up conditions the thermostatic air vent will be open, and will provide additional condensate capacity to the main valve assembly. On 4.5 bar units this will provide a minimum of 50% increased capacity above the hot condensate figures shown. On 10 and 14 bar units this will be a minimum increase of 100% on the published capacity.

## How to order

Example: 1 off Spirax Sarco 1/2" FT14 - 4.5TV stainless steel float trap fitted with screwed NPT connections. Trap is maintainable in line. Fitted with integral air vent and strainer screen.

## Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P145-02) supplied with the product.

## Spare parts

The spare parts available are shown in heavy outline. Parts drawn in broken line are not supplied as spares.

## Available spares

Main Valve ASSY with Float	5, 6, 7, 8, 12, 14, 16
Air Vent ASSY	9
Steam Lock Release Unit	10+13, 11
Gasket set (packet of 3)	13, 15

## How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the size, type of trap and pressure range i.e. 4.5, 10 or 14 bar.

**Example:** 1 - Maintenance kit for a Spirax Sarco 1/2" FTS14-4.5 steam trap.

# spirax sarco

## Balanced Pressure Thermostatic Steam Traps RTA-125, RTH-125, RTV-125

Steam Traps  
Balanced Pressure

The balanced pressure steam trap contains a welded stainless steel element which is self-adjusting over the entire operating pressure range and approximately 23°F (13°C) below saturated steam temperature.

Traps in this series are replacements for:  
TA-125, TH-125, T-25, TB-25, TS-25, T-65, T-125; 1"H, N-100 angle; H, S-65, N-100 straightway and vertical, TV-125.

Model	RTA-125	RTH-125	RTV-125

 Max. allowable temperature

### Sample Specification RTA, RTH

Steam traps shall be balanced pressure thermostatic type, self-adjusting to all pressures within their operating range. Bodies to be of forged red brass with male union inlet connection. Thermostatic element shall be of precision welded stainless steel construction, incorporating a hardened stainless steel valve head. Valve seats shall be stainless steel, and all internals, shall be replaceable without disturbing the piping connections.

### Installation

A pipeline strainer should be installed ahead of any steam trap to protect the head and seat from dirt and scale. Full port isolating valves should be placed to permit servicing. Trap should be installed below the drainage point of the equipment with a collecting leg before the trap. For best operation, the element should be in a horizontal position as shown. For a freeze-resistant installation, inlet piping must be pitched toward the trap for gravity flow and the trap outlet must be free of any piping.

### Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation of the trap from both supply and return line is required before any servicing is performed. The trap should be disassembled periodically for inspection and cleaning of the valve head and seat. Worn or damaged parts should be replaced using a complete Repair Kit.

Complete installation and maintenance instructions are given in IM-2-004-US, which accompanies the product. TI-2-0102-US 4.12

Angle & straightway traps accept the same spare parts.

# spirax sarco

## Balanced Pressure Thermo-Matic® Steam Trap TM600, TM600L, TM600N

Steam Traps

Balanced Pressure

The trap contains a calibrated element module which is self-adjusting so that condensate is discharged within 10°F of saturated steam temperature over the full operating pressure range. The solid fill bellows can withstand pressure surges and waterhammer, and a patented heat sink protects the bellows from over-expansion should the steam pressure suddenly be reduced. The integral downstream flash chamber reduces discharge velocity to provide smooth discharge of high condensate loads.

Model	TM600	TM600L	TM600N

TM600N

TM600  
TM600L

Weight  
7.0 lb  
3.2 kg

Steam Traps

Balanced Pressure

### Sample Specification

Steam trap shall be Spirax Sarco type TM600 Thermo-Matic®, self-adjusting for operating pressures to 600 psig. The traps shall incorporate a flash chamber to reduce discharge velocity. Thermostatic elements shall be factory calibrated and shall have a heat sink to prevent over-expansion. Traps shall be non-freezing, and shall have a choice of top or side inlet (TM600 & TM600L) or traps shall have horizontal in-line connections (TM600N). Body and cap shall be ductile iron (TM600 & TM600L) or carbon steel (TM600N).

### Installation

A pipeline strainer should be installed ahead of any steam trap to protect the head and seat from dirt and scale. Full-flow isolating valves should be placed to permit servicing. The trap should be installed below the equipment with a collecting leg before the trap. For best operation, the bellows should be in a horizontal position as shown. For a freeze-resistant installation, the inlet piping must be pitched toward the trap for gravity flow, and the trap must discharge to atmosphere or drain.

### Maintenance

This product can be maintained, unless installed vertically using the alternate inlet, without disturbing the inlet piping connections. Complete isolation of the trap from both supply and return line is required before any servicing is performed. The trap should be disassembled periodically for inspection and cleaning of the valve head and seat, and cleaning of the strainer screen (TM600N only). Worn or damaged parts should be replaced using a complete Element Set.

**Complete installation and maintenance instructions are given in IMI 2.004, which accompanies the product.**

## BPC32 and BPC32Y Carbon Steel Balanced Pressure Thermostatic Steam Trap

Steam Traps

Balanced Pressure

The standard welded stainless steel element is self-adjusting over the entire operating pressure range and will discharge condensate at approximately 22°F (12°C) below saturated steam temperature. The element is resistant to waterhammer, and up to 572°F (318°C) steam temperature can be tolerated by this trap.

**The BPC32Y has an integral "Y" strainer.**

Model	BPC32	BPC32Y
<b>PMO</b>	465 psig	
<b>Sizes</b>	1/2", 3/4", and 1"	
<b>Connections</b>	NPT, SW, FLG ANSI 150 & 300	
<b>Construction</b>	Forged steel body and cover, stainless steel internals	
<b>Options</b>	Special Capsule fill near to steam and subcool. Blowdown valve for BPC32Y, Check Valve.	

### Typical Applications

Kitchen and laundry equipment, steam tracers, hospital equipment, steam coils, steam radiators and steam main drip stations.

### Limiting Operating Conditions (ISO 6552)

Body design conditions		PN40
PMA -Maximum allowable pressure	725 psig	50 barg
TMA -Maximum allowable temperature	752°F	400°C
PMO -Maximum operating pressure	465 psig	32 barg
TMO -Maximum operating temperature	572°F	300°C
Designed for a maximum cold hydraulic test pressure of	1088 psig	75 barg

**Note: PMA & TMA are pressure/temperature related - see chart below.**

### Operating range

The product must not be used in this region.  
 The product should not be used in this region or beyond its operating range as damage to the internals may occur.

\*PMO Maximum operating pressure 32 barg.  
 A-B Screwed, socket weld, butt weld and flanged ANSI 300  
 A-E Flanged ANSI 150

## Sample Specification

Steam trap shall be Spirax Sarco BPC32/BPC32Y balanced pressure thermostatic-type which self-adjusts to all pressures to 464 psig. Body construction of forged steel with side inlet and outlet threaded (or socket weld) ends containing an integral stainless steel strainer. Shall be provided with blowdown when required, and be maintainable in the field without disturbing the piping. Operating element capsule of design capable of resisting waterhammer and freezing conditions, and can withstand up to 572°F temperatures.

## Spare parts

Capsule and seat assembly seat

Strainer screen & gasket	BPC32Y	(1 of each)	5, 11

Set of cover gaskets	(packet of 3)	7
Strainer cap gasket	(packet of 3)	11

## Capacities

## Installation

The trap is designed for installation with the capsule in a horizontal plane and the cover at the top, preferably with a drop leg immediately preceding the trap. When welding the trap into the pipeline, there is no need to remove the element, providing the welding is done by the electric arc method. Full port isolating valves should be installed upstream and downstream of the trap.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation of the connector from both supply and return line is required before any servicing is performed. The trap should be disassembled periodically for cleaning of the strainer screen and inspection and cleaning of the valve head and seat. Worn or damaged parts should be replaced using a complete Capsule and Seat Assembly Set.

**Complete installation and maintenance instructions are given in the IM-P005-02 sheet, which accompanies the product.**

\* Note:  
Items 9 and 10 are not available as spares.

## Sealed Balanced Pressure Thermostatic Steam Trap TSS300

Steam Traps

Balanced Pressure

The welded stainless steel element is self-adjusting over the entire operating pressure range and will discharge condensate at approximately 20°F (11°C) below saturated steam temperature. Trap may be installed in horizontal or vertical pipelines.

<b>Model</b>	<b>TSS300</b>
<b>PMO</b>	300 psig
<b>Sizes</b>	3/8" & 1/2"
<b>Connections</b>	NPT
<b>Construction</b>	All Stainless Steel Tamper-proof body
<b>Options</b>	Strainer Screen (For 1/2" size only)

### Limiting Operating Conditions

**Max. Operating Pressure (PMO)** 300 psig (21 barg)

**Max. Operating Temperature** Saturated Steam Temperature

### Pressure Shell Design Conditions ANSI 600

**PMA** Max. allowable pressure 800 psig/up to 725°F 55 barg/up to 385°C

**TMA** Max. allowable temperature 725°F/0-800 psig 385°C/0-55 barg

### Typical Applications

Critical and non-critical steam tracing systems and steam main drips.

### CONSTRUCTION MATERIALS

No.	Part	Material
1	Body*	Stainless Steel AISI 304
2	Element Plates	Stainless Steel
2A	Element Valve	Stainless Steel
3	Element Holder	Stainless Steel
4	Spring	Stainless Steel
5	Strainer Screen (optional)** Screen Tab	Stainless Steel

\* The body weld joint complies with ASME section IX and BS4870 (1981).

\*\* Optional strainer screen can be inserted into the inlet connection.

### Dimensions (nominal) in inches and millimeters

# Sealed Balanced Pressure Thermostatic Steam Trap TSS300

## Capacities

Orifice Size = .121"

## Sample Specification

Steam trap shall be encapsulated Spirax Sarco TSS300 balanced pressure thermostatic type, which will operate installed in either horizontal or vertical piping. Construction of all stainless steel with tamper-proof body sealed against leakage. Operating element to be stainless steel welded thermostatic bellows for operation without adjustment at any pressure to 300 psig. Trap to operate close to steam temperature and shall be provided with internal strainer when required.

## Operation

The TSS300 should be used for critical applications (such as draining steam mains or high temperature tracing lines) where it is important to keep the steam space free of condensate. This installation must also be used when the trap discharges into a pressurized condensate return system.

The normal failure mode will be in the open position unless the bellows is distorted by severe operating conditions.

The TSS300 may also be used as a thermostatic air vent. For this use, it should be installed to discharge vertically upward. The discharge should be piped to a drain.

## Installation

The trap nameplate indicates the flow direction. A strainer should be installed upstream of the trap (an optional internal strainer is available). Full port isolating valves should be installed upstream and downstream. To avoid damaging the thermostatic element, the pipe connections should never be welded to the trap. For freeze protection, all drain lines must be pitched toward the trap for gravity flow. The trap must discharge vertically downward and the discharge piping must be self-draining.

## Maintenance

This product is factory sealed for tamper-proof operation, and no repair parts are available. Complete isolation of the trap from both supply and return line is required before the trap is removed.

**Complete installation and maintenance instructions are given in IMI 2.0001, which accompanies the product.**

# spirax sarco

## Sealed Balanced Pressure Thermostatic Steam Trap DTS300

Steam Traps

Balanced Pressure

The welded stainless steel element is self-adjusting over the entire operating pressure range and will discharge condensate at approximately 190°F. Trap may be installed in horizontal or vertical pipelines.

<b>Model</b>	<b>DTS300</b>
<b>PMO</b>	300 psig
<b>Sizes</b>	3/8" & 1/2"
<b>Connections</b>	NPT
<b>Construction</b>	All Stainless Steel Tamper-proof body
<b>Options</b>	Strainer Screen (For 1/2" size only)

### Limiting Operating Conditions

**Max. Operating Pressure (PMO)** 300 psig (21 barg)

**Max. Operating Temperature** Saturated Steam Temperature

### Pressure Shell Design Conditions

ANSI 600

**PMA** 800 psig/up to 725°F 55 barg/up to 385°C  
Max. allowable pressure

**TMA** 725°F/0-800 psig 385°C/0-55 barg  
Max. allowable temperature

### Typical Applications

Non-critical steam tracing systems.

### Construction Materials

No.	Part	Material

# Sealed Balanced Pressure Thermostatic Steam Trap DTS300

## Capacities

## Sample Specification

Steam trap shall be encapsulated Spirax Sarco DTS300 balanced pressure thermostatic type, which will operate installed in either horizontal or vertical piping. Construction of all stainless steel with tamper-proof body sealed against leakage. Operating element to be stainless steel welded thermostatic bellows for operation without adjustment at any pressure to 300 psig. Trap to operate close to 190 °F steam temperature and shall be provided with internal strainer when required.

## Operation

The DTS300 should be used for non-critical applications (such as non-critical tracing lines) where it is important to keep the temperature of condensate discharge low. The normal failure mode will be in the open position unless the bellows is distorted by severe operating conditions.

## Installation

The trap nameplate indicates the flow direction. A strainer should be installed upstream of the trap (an optional internal strainer is available). Full port isolating valves should be installed upstream. To avoid damaging the thermostatic element, the pipe connections should never be welded to the trap. For freeze protection, all drain lines must be pitched toward the trap for gravity flow. The trap must discharge vertically downward and the discharge piping must be self-draining.

## Maintenance

This product is factory sealed for tamper-proof operation, and no repair parts are available. Complete isolation of the trap from both supply and return line is required before the trap is removed. Complete installation and maintenance instructions are given in IMI 2.0001A, which accompanies the product.

## Balanced Pressure Thermostatic Steam Trap MST21 & MST21H

Steam Traps  
Balanced Pressure

The welded stainless steel element is self-adjusting over the entire operating pressure range and will discharge condensate at approximately 18°F (10°C) below saturated steam temperature on the standard Fill trap. Up to 518°F (270°C) and waterhammer can be tolerated by this trap. The MST21 can be disassembled for servicing. Trap may be installed in horizontal or vertical pipelines. Can be used on tracing, drips, sterilizers and a low capacity air vent.

<b>Model</b>	<b>MST21 / MST21H</b>
<b>PMO</b>	304 psig
<b>Sizes</b>	1/4", 1/2" MST21 1/2", 3/4", 1" MST21H

TI-2-0021-US 1.14

# Balanced Pressure Thermostatic Steam Trap MST21 & MST21H

## Capacities

Orifice Size:  
MST21 = .079"  
MST21H = .197"

## Sample Specification

Steam trap shall be Spirax Sarco MST21 balanced pressure thermostatic type, which self adjusts to all pressures to 304 psig. Trap to be of all stainless steel maintainable construction. Internal element shall be capable of resisting waterhammer and withstanding up to 518°F (270°C). Offered in standard and high capacity with choice of 3 discharge temperature options.

## Installation

The steam trap is intended for installation in a vertical line with the inlet at the top and the outlet at the bottom. This will ensure that it is self-draining. Full port isolating valves should be installed upstream and downstream of the trap. If fitted in a horizontal line, the trap should be preceded by a short drop leg. Trap will be piped inverted (outlet vertical up) when used as an airvent (NTS-Fill recommended).

## Maintenance

Complete isolation of the trap from both supply and return line is required before any servicing is performed.

The trap should be disassembled periodically for cleaning of the strainer screen and inspection and cleaning of the valve head and seat.

Worn or damaged parts should be replaced using a complete Capsule Assembly Set.

**Complete installation and maintenance instructions are given in the IM-P125-07 sheet, which accompanies the product.**

## Spare Parts

**Capsule Assembly Set** 3, 4, 5, 6, 7  
**Gasket Set (Set of 3)** 7

Available spare parts are shown in heavy outline. Parts drawn in broken line are not supplied as spares.

*Please note thermostat fill when ordering spares.*

# spirax sarco

## Balanced Pressure Thermostatic Steam Trap SBP30LC

Steam Traps  
Balanced Pressure

The welded stainless steel element is self-adjusting over the entire operating pressure range and will discharge condensate at approximately 22°F (12°C) below saturated steam temperature. The element is resistant to waterhammer, and up to 545°F (285°C) superheat over saturated steam temperature can be tolerated by this trap.

<b>Model</b>	<b>SBP30LC</b>
<b>PMO</b>	435 psig
<b>Sizes</b>	1/2" & 3/4"
<b>Connections</b>	NPT
<b>Construction</b>	All Stainless Steel tamper- proof body
<b>Options</b>	S.W. & BSP connections Subcooling capsule filling

### Dimensions

(nominal) in inches and millimeters

Size	A	B	C	D	Weight
1/2", 3/4"	3.1 80	2.5 63	2.2 56	0.74 19	2.2 lb 1.0 kg

### Typical Applications

Kitchen and hospital equipment, steam tracers, steam coils, steam radiators and steam main drip stations.

### Limiting Operating Conditions

**Max. Operating Pressure (PMO)** 435 psig (30 barg)

**Max. Operating Temperature** 545°F (285°C) at 435 psig(30 barg)

### Pressure Shell Design Conditions

**PMA** 720 psig/up to 100°F 50 barg/up to 38°C  
 Max. allowable pressure 450 psig/459°F 31 barg/237°C  
 400 psig/752°F 27 barg/426°C

**TMA** 752°F/0-400 psig 400°C/0-27 barg  
 Max. allowable temperature

### Capsule Filling

As standard, the trap is supplied with filling **STD**, which will operate approximately 22°F (12°C) below steam temperature.

As an option, the trap can be supplied with filling **SUB**, which will operate approximately 43°F (24°C) below steam temperature, i.e. sub-cooling.

Note: If the alternative capsule is required, this must be clearly stated on the order, e.g. Capsule to have **SUB** fill.

### Construction Materials

No.	Part	Material	
1	Cover*	Stainless Steel	ASTM A240 Gr 304
2	Capsule	Stainless Steel	AISI 321

5	Strainer Screen	Stainless Steel	AISI 304
6	Body*	Stainless Steel	ASTM A473 Gr 304

\* The body/cover weld joint complies with ASME section IX and BS4870 (1981).

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.

In the interests of development and improvement of the product, we reserve the right to change the specification.

# Balanced Pressure Thermostatic Steam Trap SBP30LC

## Sample Specification

Steam trap shall be encapsulated Spirax Sarco SBP30LC balanced pressure thermostatic type, which self-adjusts to all pressures to 435 psig and can be installed in either horizontal or vertical piping. Maintenance-free and tamper-proof design of all stainless steel construction with forged body and drawn cover completely sealed against leakage. Operating element to be a solidly liquid-filled thermostatic capsule which vents air freely, operates close to steam temperature, resists waterhammer and freezing conditions, and can withstand up to 90°F superheat.

## Installation

Although the trap will operate in any position, the preferred installation is in a horizontal pipe with a drop leg immediately before the trap. The electric arc process must be used when the SW trap is welded into the pipeline. Full port isolating valves should be installed upstream and downstream of the trap.

## Maintenance

This product is factory sealed for tamper-proof operation, and no repair parts are available. Complete isolation from both supply and return line is required before the trap is removed.

**Complete installation and maintenance instructions are given in the IMI sheet, which accompanies the product.**

## Cast Iron Inverted Bucket Steam Traps B Series

Steam Traps

Inverted Buckets

The trap contains an inverted bucket mechanism which responds to the difference in density between steam and condensate. The discharge action is cyclic. Condensate is discharged close to steam temperature.

\*C1 Dimension for traps supplied with bi-metal air vents (B12HS, B22S, B32S, B42S, B52S)

## Sample Specification

Steam traps shall be of the mechanical inverted bucket type with cast iron bodies, screwed NPT horizontal connections and stainless steel valve head, seat and bucket. An internal bi-metal air vent and/or strainer screen shall be available as options.

## Installation

A pipeline strainer should be installed ahead of any trap to protect the head and seat from dirt and scale. Suitable full-port isolation valves should be placed around trap to permit servicing. The trap should be installed below the equipment drainage connection in a horizontal position so that the bucket will rise and fall vertically. For superheated steam applications, a check valve should be installed at the trap inlet.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation of the trap from both supply and return line is required before any servicing is performed.

The trap should be disassembled periodically for inspection and cleaning of the valve head and seat, and operating mechanism. The bucket vent hole must be clear. The optional strainer screen should be removed and cleaned.

Worn or damaged parts should be replaced using a complete mechanism assembly kit.

**Complete installation and maintenance instructions are given in IMI 2.400, which accompanies the product.**

# Cast Iron Inverted Bucket Steam Trap B Series Capacities Chart

## How to Select

The tables overleaf show the maximum capacities on continuous discharge of condensate approximately at steam temperature. Cold water discharge capacities are much higher.

When calculating the capacity requirement for the steam trap, use a safety factor of 2 or 3 times the normal load, depending on the application. Then from the capacity table overleaf, select the trap with the required capacity and pressure range. Caution: Oversizing bucket traps, especially on light load applications such as main drips, can cause the trap to lose its seal and pass steam.

Be careful to select the inverted bucket trap with a seat suitable for the maximum pressure differential and with sufficient capacity to handle the load at the minimum expected pressure differential. The trap will not open if subjected to pressures greater than the maximum differential pressure.

The capacity table also applies to traps with optional air vents (B12H, B22, etc.)

# spirax sarco

## Cast Iron Inverted Bucket Steam Trap Series 200

Steam Traps  
Inverted Buckets

The trap contains an inverted bucket mechanism which responds to the difference in density between steam and condensate. The discharge action is cyclic. Condensate and non-condensibles are discharged close to steam temperature.

# Cast Iron Inverted Bucket Steam Trap Series 200

## Sample Specification

Steam traps shall be of the mechanical inverted bucket type with cast iron bodies with screwed NPT vertical connections and stainless steel internals.

## Installation

A pipeline strainer should be installed ahead of any trap to protect the head and seat from dirt and scale. Suitable full-port isolation valves should be placed around trap to permit servicing. The trap should be installed below the equipment drainage connection in a vertical position with the inlet at the bottom so that the bucket will rise and fall vertically.

## Maintenance

This product must be removed from the line for maintenance. Complete isolation of the trap from both supply and return line is required before any servicing is performed. The trap should be disassembled periodically for inspection and cleaning of the valve head and seat, and operating mechanism. The bucket vent hole must be clear. Worn or damaged parts should be replaced using a complete valve and seat assembly.

**Complete installation and maintenance instructions are given in IMI 2.400, which accompanies the product.**

Steam Traps

Inverted Buckets

The trap contains an inverted bucket mechanism which responds to the difference in density between steam and condensate. The discharge action is cyclic. Condensate and non-condensibles are discharged close to steam temperature. The SIB30 is sealed for tamper-proof operation.

Model	SIB30
PMO	435 psig (see below)
Sizes	1/2", 3/4"
Connections	NPT
Construction	Tamper-proof, all Stainless Steel
Options	SW Connections

### Construction Materials

No.	Part	Material	
1	Cover*	Stainless Steel	ASTM A240 Gr 304
2	Body*	Stainless Steel	ASTM A314 Gr 304
3	Bucket	Stainless Steel	AISI 321
4	Valve Guide Plate	Stainless Steel	AISI 321
5	Valve Seat	Stainless Steel	AISI 440B
6	Valve	Stainless Steel	AISI 440B
7	Valve Lever	Stainless Steel	AISI 321
8	Internal Tube	Stainless Steel	AISI 304/AISI 321

\*The body/cover weld joint complies with ASME section IX and BS 4870 (1981).

### Limiting Operating Conditions

#### PMO - Maximum operating pressure limitations

Δ P PSIG BAR		Trap

Maximum body design conditions	PN50 (ANSI 300)
PMA - Maximum allowable pressure	50 barg
TMA - Maximum allowable temperature	400°C
Cold hydraulic test pressure	75 barg

### Typical Applications

Steam tracing, steam main drip stations, laundry equipment, industrial dryers and storage tanks.

### Operating Range (SHELL)

■ The product must not be used in this region.

\* PMO Maximum operating pressure recommended with proper mechanism

A - A Flanged ANSI 300, screwed and socket weld  
B - B Flanged BS 4504 PN40  
C - C Flanged ANSI 150

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

# Stainless Steel Sealed Inverted Bucket Steam Trap SIB30 and SIB30H

## SIB30

## Installation

A pipeline strainer should be installed ahead of any trap to protect the head and seat from dirt and scale. Suitable full-port isolation valves should be placed around trap to permit servicing. The trap should be installed below the equipment drainage connection in a horizontal position so that the bucket will rise and fall vertically.

If installed in exposed locations, consideration should be given to insulating the trap.

## SIB30H

## Sample Specification

Steam traps shall be encapsulated inverted bucket type of all-stainless steel construction, which is tamper-proof and maintenance-free, and resists distortion due to freezeup or waterhammer. Trap to have a forged body and drawn cover fully weld-sealed against leakage, with threaded (socket weld) end connections for installation in horizontal piping. Operation shall be self-priming, with orifice size selected for the capacity required by the application, and suitable for working pressure to 435 psig.

### Dimensions (nominal) in inches and millimeters

Size	A	B	C	D	Weight
<b>SIB30</b>					
1/2"	4.3	3.0	4.9	5.6	3.3 lb
15	110	76	124	143	1.5 kg
3/4"	4.3	3.0	4.9	5.6	3.3lb
20	110	76	124	143	1.5 kg
<b>SIB30H</b>					
1/2"	4.3	3.0	6.3	7.0	3.9 lb
15	110	76	159	177	1.75 kg
3/4"	4.3	3.0	6.3	7.0	3.9 lb
15	110	76	159	177	1.75 kg

## Maintenance

This product is factory sealed for tamper-proof operation, and no repair parts are available. Complete isolation of the trap from both supply and return line is required before the trap is removed. Complete installation and maintenance instructions are given in IM-2-400-US, which accompanies the product.

## Stainless Steel Sealed Inverted Bucket Steam Trap SIB 45

Steam Traps  
Inverted Buckets

The trap contains an inverted bucket mechanism which responds to the difference in density between steam and condensate. The discharge action is cyclic. Condensate and non-condensibles are discharged close to steam temperature. The SIB 45 is sealed for tamper-proof operation. The SIB 45/5 has an integral check valve.

<b>Model</b>	<b>SIB 45</b>
<b>PMO</b>	652 psig (see below)
<b>Sizes</b>	3/4", 1"
<b>Connections</b>	NPT / SW (see below)
<b>Construction</b>	Tamper-proof, all Stainless Steel
<b>Options</b>	SW Connections (standard on SIB 45/5)

### CONSTRUCTION MATERIALS

No.	Part	Material	
1	Cover*	Stainless Steel	ASTM A240 Gr 304
2	Body*	Stainless Steel	ASTM A314 Gr 304
3	Bucket	Stainless Steel	ASTM A240 Gr 304
4	Valve Guide Plate	Stainless Steel	AISI 321
5	Valve Seat	Stainless Steel	AISI 440B
6	Valve	Stainless Steel	AISI 440B
7	Valve Lever	Stainless Steel	AISI 321
8	Internal Tube	Stainless Steel	ASTM A 269-304
9	Check Valve Assy. (SIB 45/5 only)	Stainless Steel	BS 970 431 S29 ASTM A 269 TP 316 AISI 420

\* The cover is welded to the body using the TIG process. Welds are approved in accordance with ASME section IX and BS 4870 (1981.)

### LIMITING OPERATING CONDITIONS

Trap Model	Connections	Operating Pressure Range	
		Min. psig (barg)	Max. psig (barg)
SIB 45/10	NPT	- - to	65 (4.5)
SIB 45/8	NPT	65 (4.5) to	123 (8.5)
SIB 45/6	NPT	123 (8.5) to	290 (20)
SIB 45/5	SW	290 (20) to	652 (45)

**Max. Operating Temperature \*** 842°F (450°C) at all operating pressures

\* For superheated steam applications, a check valve should be installed at the trap inlet. (SIB 45/5 has an integral check valve.)

### PRESSURE SHELL DESIGN CONDITIONS

<b>PMA</b> Max. allowable pressure	1440 psig/up to 100°F	100 barg/up to 38°C
	862 psig/529°F	59 barg/276°C
	782 psig/842°F	54 barg/450°C
<b>TMA</b> Max. allowable temperature	842°F/0-782 psig	450°C/0-54 barg

### TYPICAL APPLICATIONS

Steam tracing, steam main drip stations, laundry equipment, industrial dryers and storage tanks.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

# Stainless Steel Sealed Inverted Bucket Steam Trap

## SIB 45

### CAPACITIES

### SAMPLE SPECIFICATION

Steam traps shall be encapsulated inverted bucket type of all-stainless steel construction, which is tamper-proof and maintenance-free, and resists distortion due to freezeup or waterhammer. Trap to have a forged body and drawn cover fully weld-sealed against leakage, with threaded (socket weld) end connections for installation in horizontal piping. Operation shall be self-priming, with orifice size selected for the capacity required by the application, and suitable for working pressure to 652 psig.

### INSTALLATION

A pipeline strainer should be installed ahead of any trap to protect the head and seat from dirt and scale. Suitable full-port isolation valves should be placed around trap to permit servicing. The trap should be installed below the equipment drainage connection in a horizontal position so that the bucket will rise and fall vertically.

If installed in exposed locations, consideration should be given to insulating the trap.

### MAINTENANCE

This product is factory sealed for tamper-proof operation, and no repair parts are available. Complete isolation of the trap from both supply and return line is required before the trap is removed.

**Complete installation and maintenance instructions are given in IMI 2.400, which accompanies the product.**

Steam Traps

Inverted Buckets

## Thermoton Liquid Expansion Steam Traps

Steam Traps

Liquid Expansion

**Types "C" Thermotons** can be field adjusted to hold back condensate until it has cooled to between 75°F and 212°F. (Four 50°F adjustment ranges are available.) Thermotons can therefore function as both steam traps and very simple temperature regulators.

Model	CL-6	CH-6
<b>PMO</b>	125 psig	300 psig
<b>Sizes</b>	3/4"	
<b>Connections</b>	NPT	
<b>Construction</b>	Cast Iron Body Brass & Stainless Steel Internals

# Thermoton Liquid Expansion Steam Traps

## Sample Specification

Liquid expansion steam traps shall contain a solidly liquid-filled thermostatic element, and shall be field-adjustable to discharge condensate at a fixed temperature below 212°F.

## Installation

Thermotons function both as steam trap and simple temperature regulator. Where over temperature due to element failure will cause risk to people or process a failsafe backup safety control should be fitted. The Type C Thermotons should normally be installed with the outlet above the trap. When used to provide freeze protection, install with outlet downwards (as shown above) to be self draining. Discharge temperature change is approximately 25°F per full turn of the adjustment nut. Allow 1/2 hour between adjustments.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation of the trap from both supply and return line is required before any servicing is performed. The trap should be disassembled periodically for inspection and cleaning of the valve head and seat, and operation of the element set. Worn or damaged parts should be replaced using a complete repair kit. Complete installation and maintenance instructions are given in IMI 2.201, which accompanies the product.

## Spare Parts

### Types C Part No.

## No. 8 Liquid Expansion Steam Trap

Steam Traps

Liquid Expansion

The No. 8 Fixed Temperature Liquid Expansion Thermostatic Steam Trap has an oil-filled element set to operate at a fixed temperature. It is easily adjusted to discharge condensate at any temperature between 140° and 212°F (60° and 100°C).

<b>Model</b>	<b>No. 8</b>
<b>PMO</b>	250 psig
<b>Sizes</b>	1/2"
<b>Connections</b>	NPT
<b>Construction</b>	Bronze Body Brass & Stainless Steel Internals
<b>Options</b>	BSP connections

### Typical Applications

Simple temperature control applications.

**Note: Suitable fail safe precautions must be taken.**

Steam trapping applications where it is desirable to subcool the condensate below 212°F.

No. 8 adjustable in door process temperature control and condensate drainage.

No. 8 set at 140° - 212°F when used outside or in freezing conditions.

### Construction Materials

No.	Part	Material	
1	Adjustment Nut	Brass	BS 2872 CZ 122
2	Overload Spring	Stainless Steel	AISI 302
3	Element Nut	Brass	BS 2872 CZ 122

TI-2-200-US 07.02

# No. 8 Liquid Expansion Steam Trap

## Capacities

Capacity shown is based on a trap with the adjustment 3 turns open and handling condensate at 176°F 80°C.

## Dimensions (nominal) in inches and millimeters

Size	A	B	C	Weight
1/2"	1.3 32	5.4 137	3.1 78	2.7 lb 1.2 kg

## Installation

The No. 8 functions both as steam trap and simple temperature regulator. Where over temperature due to element failure could cause risk to people or process, a failsafe backup safety control should be fitted. A 'Y' strainer should be installed upstream of the trap. For fixed temperature discharge, the No. 8 trap should be installed with the inlet below the equipment being drained. The outlet should always be above the trap. On indoor process applications outside freezing application outlet should be rotated down for full drainage. Full-port isolating valves should be installed upstream and downstream of the trap.

## Sample Specification

Steam traps shall be of the liquid expansion type, having bronze bodies with screwed connections and stainless steel trim. Condensate discharge temperature shall be adjustable within the range specified while traps are in service.

## Maintenance

The No. 8 trap 140°-212°F range is repairable. Complete isolation of the trap from both supply and return line is required before any servicing is performed. The trap should be disassembled periodically for inspection and cleaning of the valve head and seat. Worn or damaged parts should be replaced using a complete element set (range 140° - 212°F only).

If the thermostat becomes inoperative, the cimpet No. 8 must be replaced. **Complete installation and maintenance instructions are given in the IMI sheet, which accompanies the product.**

## Bydrain Freeze Protection Liquid Expansion Trap

Steam Traps

Liquid Expansion

### Description

The Spirax Sarco bydrain freeze protection liquid expansion trap is made of stainless steel. It has been specifically designed for protecting condensate systems from frost damage. This fixed temperature discharge trap continuously monitors the temperature in the pipes; the trap is firmly closed at 45°F, but as the temperature of the liquid cools to 36°F the trap opens, discharging any liquid in the pipe.

### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC.

### Certification

This product is available with certification to EN 10204 3.1.B.

**Note:** All certification /inspection requirements must be stated at the time of order placement.

### Sizes and pipe connections

½" NPT

### Limiting conditions

Body design conditions	PN50, Class 300 to ANSI B 16.34
PMA - Maximum allowable pressure	600 psig (41.4 bar g)
TMA - Maximum allowable temperature	842°F (450°C)
PMO - Maximum operating pressure	145 psig (10 bar g)
TMO - Maximum operating temperature	158°F (70°C)

Minimum operating pressure for satisfactory operation is 1psig  
No backpressure for correct operation must free drain.

Designed for a maximum cold hydraulic test pressure of 62 bar g

**Note:** The trap seat is completely open at a water circuit temperature of 36°F and closed at 45°F.

### Materials

No.	Part	Material
1	Body	Stainless steel AISI 316L
2	Thermostat	Brass
3	Valve head Internal parts	PTFE Stainless steel

### Dimensions/weights (approximate) in inches and lbs.

Size	Connections	A	B	Weight
½"	NPT	1.7	4.3	1.4

### Typical Applications

Freeze protection for float & thermostatic steam traps, coils, tanks, water lines on docks, eyewash stations, safety showers, tracing condensate manifolds, tracing steam manifolds, condensate return lines, pressure powered pumps, electric pumps, and flash tanks.

### Capacities

Pressure (psig)	GPM	#/hr
1	1.2	587
2	1.5	766
5	2.2	1090
10	2.8	1423
25	4.0	2024
50	5.3	2643
100	6.9	3451
145	8.0	3981

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-P670-02-US 3.14

# Bydrain Freeze Protection Liquid Expansion Trap

## Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P670-01) supplied with the product.

## How to order

Example: 1 off Spirax Sarco ½" bydrain freeze protection liquid expansion trap with screwed NPT end connections.

## Sample Specification

Temperature actuated drain trap shall have a stainless steel body with brass thermostatic actuator, which will operate in a vertical or horizontal position. Thermostatic actuator to be tamper proof and a sealed encapsulated unit. Thermostatic actuator to crack open at 36°F and be closed tight at 45°F. Drain trap to operate from 0 to 145 psig pressure range.

## Operation

The Bydrain should be used for any application where flow to replenish temperature is required to prevent freezing of water or condensate lines or to drain a vessel which is prone to freezing due to ambient conditions. The normal failure mode is in the open position unless plugged by debris.

## Installation

The marking on the trap indicates the flow direction if placed on water line, condensate line, tank, etc. An isolation valve should be placed ahead of trap to allow for removal of trap without draining the system. When used on steam trap isolation valves should be on the steam itself so no isolation is required ahead of the Bydrain. Discharge must go to zero atmospheric pressure only, to avoid damage to the thermostat. The pipe connections should never be welded. Vertical is the preferred position where space is available. When used in a horizontal position pitch piping toward the trap. When used on steam service or hot condensate the trap must be at least 6" or more from the device. Discharge into large diameter drain or ditch. Never create an "ICE PATCH" hazard by discharging on to slab or walkway.

# spirax sarco

## SMC32 and SMC32Y Carbon Steel Bimetallic Steam Trap

Steam Traps  
Bimetallic

The SMC32 and SMC32Y are carbon steel maintainable bimetallic steam traps with straight connections. The SMC32 has an integral flat strainer screen and the SMC32Y has an integral cylindrical Y-type strainer.

Model	SMC32	SMC32Y
PMO	465 psig	
Sizes	1/2", 3/4", and 1"	
Connections	NPT, SW, FLG ANSI 150 & 300	
Construction	Forged steel body and cover, stainless steel internals	
Options	Blowdown valve for SMC32Y.	

### Typical Applications

Kitchen and laundry equipment, steam tracers, hospital equipment, steam coils, steam radiators and steam main drip stations.

### Limiting Operating Conditions (ISO 6552)

Body design conditions		PN40
PMA	-Maximum allowable pressure	725 psig (50 barg)
TMA	-Maximum allowable temperature	752°F (400°C)
PMO	-Maximum operating pressure	464 psig (32 barg)
TMO	-Maximum operating temperature	662°F (300°C)
Designed for a maximum cold hydraulic test pressure of		1088 psig (75 barg)

Note: PMA & TMA are pressure/temperature related - see chart below.

### Operating range

### Materials

## Sample Specification

Steam trap shall be Spirax Sarco SMC32/SMC32Y bimetallic-type which self-adjusts to all pressures to 464 psig. Body construction of forged steel with side inlet and outlet threaded (or socket weld) ends containing an integral stainless steel strainer. Shall be provided with blowdown when required, and be maintainable in the field without disturbing the piping. Operating bimetal of design capable of resisting waterhammer and freezing conditions, and can withstand up to 662°F temperatures.

## Capacities

## Installation

The trap is designed for installation with the bimetal in a horizontal plane and the cover at the top, preferably with a drop leg immediately preceding the trap. When welding the trap into the pipeline, there is no need to remove the element, providing the welding is done by the electric arc method. Full port isolating valves should be installed upstream and downstream of the trap.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation of the connector from both supply and return line is required before any servicing is performed.

The trap should be disassembled periodically for cleaning of the strainer screen and inspection and cleaning of the valve head and seat.

Worn or damaged parts should be replaced using a complete Bimetal Assembly Set.

**Complete installation and maintenance instructions are given in the IM-P076-09 sheet, which accompanies the product.**

Bimetallic

### Description

Spirax Sarco's HP80, HP100, HP150 and HP210 bimetallic steam traps are made of forged steel, and designed for draining high pressure, high temperature steam lines and processes. These steam traps, which are specially designed for HP steam, have a reinforced stainless steel insert within the body and can be repaired inline. They operate with no loss of steam, and quickly drain air, non-condensate gases and large quantities of cold water on start-up. Normally open in the event of failure, they have a check valve, a built-in strainer screen and an external device for adjusting the discharge temperature of the condensate.

### Sizes and pipe connections

1/2", 3/4" and 1" socket weld to ANSI B 16.11  
or butt weld to ANSI B 16.25

### Limiting Conditions

Body design conditions	HP80	PN250, Class 1500
	HP100	to ANSI B 16.24
	HP150	PN420, Class 2500
	HP210	to ANSI B 16.34
PMO - Maximum operating pressure	HP80	1160 psig 80 barg
	HP100	1450 psig 100 barg
	HP150	2175 psig 150 barg
	HP210	3045 psig 210 barg
TMO - Maximum operating temperature	HP80	932°F up to 1160 psig 500°C up to 80 barg
	HP100, HP150, HP210	1058°F up to 3045 psig 570°C up to 210 barg
Minimum operating pressure	HP80	290 psig 20 barg
	HP100	362 psig 25 barg
	HP150	362 psig 25 barg
	HP210	362 psig 25 barg
△ PMX - The back pressure for correct operation must not exceed 90% of the upstream pressure.		
Designed for a maximum cold hydraulic test pressure of:	HP80 and HP100	5628 psig 388 barg
	HP150 and HP210	9367 psig 646 barg

### Materials

No.	Part		Material	
1	Body	HP80	Alloy steel	ASTM A182 F11
		HP100, 150, 210	Alloy steel	ASTM A182 F22
2	Valve seat gasket		Stainless steel	AISI 304
3	Bimetallic element		Stainless steel	
4	Strainer screen		Stainless steel	AISI 304L
5	Gland packing		Graphite (asbestos-free)	
6	Locking gland nut		Stainless steel	
7	Cover gasket		Metal, stainless steel/graphite (asbestos-free)	
8	Cover	HP80	Alloy steel	ASTM A182 F11
		HP100, 150, 210	Alloy steel	ASTM A182 F22
9	Cover bolt	HP80	Steel	ASTM A193 B7
		HP100, 150, 210	Steel	ASTM A193 B16
10	Blind nut gasket		Metal, stainless steel/graphite	
11	Blind nut		Steel	ASTM A105

### Certification

This product is available with certification to EN 10204 3.1.B  
All certificates must be requested at the time of ordering.

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.*

## Spare Parts

The spare parts available are detailed below. No other parts are supplied as spares.

### Available spare

Bimetallic assembly kit	2, 3, 4, 7, 10
Screen	4
Gasket Kit	2, 7, 10
Check Valve Assembly	13, 14

## How to order spares

Always order spares by using the description given in the column headed 'Available spare' and state the size and model of the bimetallic steam trap.

**Example:** 1 — Bimetallic assembly kit for a 1" Spirax Sarco HP80 bimetallic steam trap.

## Recommended tightening torques

Item	 in mm	Ft. / Lbs.
3	36 A/F	88.51
6	21 A/F	
9	HP80	24 A/F
	HP100	24 A/F
11	HP150, HP210	30 A/F
	HP80, HP100	41 A/F
	HP150, HP210	55 A/F

## Installation and maintenance

Full Installation and Maintenance Instructions (Inclusive of operation and fault finding) are supplied with the product, see IMI

## How to order

**Example:** 1 off 1/2" Spirax Sarco HP80 bimetallic steam trap with socket weld end connections.

## HP45 Bimetallic Steam Trap

Steam Traps

Bimetallic

### Description

Spirax Sarco's HP45 bimetallic steam traps are made of forged steel, and designed for draining high pressure, high temperature steam lines and processes.

These steam traps, which are specially designed for HP steam, have a reinforced stainless steel insert within the body and can be repaired inline. They operate with no loss of steam, and quickly drain air, non-condensable gases and large quantities of cold water on start-up.

Normally open in the event of failure, they have a check valve, a built-in strainer screen and an external device for adjusting the discharge temperature of the condensate.

### Sizes and pipe connections

1/2", to 1" screwed BSP/NPT and socket weld ends (ANSI B 16.11)

3/4" and 1" with ANSI 600 flanges

### Limiting Conditions

Body design conditions	PN150, Class 900 to ANSI B 16.34	
PMO - Maximum operating pressure	652 psig	45 barg
TMO - Maximum operating temperature	842°F	450°C
Minimum operating pressure	217 psig	15 barg
ΔPMX - The back pressure for correct operation must not exceed 90% of the upstream pressure.		
Designed for maximum cold hydraulic test pressure of	3320 psig	229 barg

### Materials

No.	Part	Material
1	Body	Steel ASTM A105 Gr.II or equivalent
2	Valve seat gasket	Stainless steel AISI 304
3	Bimetallic element	Stainless steel
4	Strainer screen	Stainless steel AISI 304L
5	Cover gasket	Metal, copper/graphite (asbestos-free)
6	Cover	Steel ASTM A105 or equivalent
7	Cover bolt	Steel
8	Blind nut gasket	Metal, copper/graphite (asbestos-free)
9	Blind nut	Steel ASTM A105 or equivalent
10	Lock-nut	Steel

### Certification

This product is available with certification to EN 10204 3.1.B  
All certificates must be requested at the time of ordering.

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.

Wireless steam trap monitoring system

es r to

The STAPS wireless steam trap monitoring system has been designed to efficiently monitor and evaluate steam trap operation. It surveys the operation of the steam trap at regular intervals and identifies poor performance that can cause reduced plant efficiency and increased energy consumption. It can diagnose both failed-open steam traps that leak live steam and those that have failed-closed or are blocked that result in waterlogging leading to plant damage, product spoilage and health and safety concerns.

Using non-intrusive installation technology combined with a 2.4 GHz wireless network, it is an ideal solution for steam trap monitoring. It is suitable for use with all types of steam trap and can be connected to pipework up to 4", via an adjustable clamp.

### Benefits include:

- Continuously monitoring of all steam traps.
- Reduces energy and emissions loss significantly.
- Immediate identification of failure location for quick response/action.
- Ability to validate losses via integrated software.
- Non-intrusive – no need to break into the steam line to install
- A range of clamps to suit pipework ranging up to 4".
- No need for height access equipment to check trap operation.
- Typically 3 years battery life.

### Certification and Approvals

- |                             |  |
|-----------------------------|--|
| EMC Emissions and immunity: | Emissions class B and Industrial immunity.                     |
| - EN 61326-2-1: 2006        | Complies with FCC rules CFR 47 (1 <sup>st</sup> October 2011). |
| - EN 61326-2-3: 2006        | Safety to IEC/EN 61010-1 2001 (second edition).<br>CSA 22.2    |

### Associated equipment:

- Repeater.
- Laptop / PC software.
- Receiver.
- Access to the company's LAN network is preferred, giving improved network coverage.
- For stand alone PC systems, it is recommended that a network switch device is used between the PC and receiver.

### PC application:

- Allows quick and easy viewing of whole steam trap population.
- Alerts the user to any issues with traps.
- Historical view of data and maintenance on each trap.

### Sizes and pipe connections

The STAPS wireless monitoring system is suitable for connecting to pipework up to 4", via an adjustable clamp. The head can be directly mounted to the sensor or fitted remotely.

### Materials

Head unit	Head casing	PA12 glass filled
	Sensor housing	Stainless steel 316/304
	Sensor	PZT
	Clamp	Stainless steel 430/304
	Winged nut	Stainless steel 316
	LED enclosure	PA12
	Sensor cable	FEP/PTFE insulation
	Probe	Stainless steel
	Mounting Bracket	Stainless steel 430
	Sensor guide	Stainless steel 304
Receiver/ Repeater	Casing	ABS

Wireless steam trap monitoring system plus wing nut clamp that is used on pipelines up to 1¼".

Wireless steam trap monitoring system plus jubilee clamp that is used on pipelines from 1.5" to 4".

Receiver

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

## Technical information

### Head unit:

Available with post or tethered head mountings.

<b>Integral battery</b>	Lithium Thionyl Chloride
<b>Maximum altitude</b>	9842 ft (3 000 m) (0.7 bar atmospheric)
<b>Ambient temperature range</b>	-20 - 158°F (-29 to +70°C)
<b>Maximum pipe temperature</b>	797°F (425°C)
<b>Maximum relative humidity</b>	95%
<b>Enclosure rating</b>	IP65
<b>Output</b>	Wireless 2.4 GHz
<b>Display</b>	LED
<b>Operating modes</b>	Trap monitoring unit - end device or repeater/end device

### Receiver / Repeater

<b>Power</b>	Mains powered 100 – 250 Vac, 50 – 60 Hz
<b>Current</b>	ac – 0.5 A 100 Vac dc – 1.5 A 12 V
<b>Connector</b>	ac – 2 pin IEC 320-C8 US mains plug dc – 2 pin IP65 connector
<b>Maximum altitude</b>	9842 ft 3 000 m (0.7 bar atmospheric)
<b>Ambient temperature range</b>	-20 - 158°F (-29 to +70°C)
<b>Maximum relative humidity</b>	95%
<b>Enclosure rating</b>	IP65 (Excluding external power supply)
<b>Display</b>	LED
<b>Output</b>	Wireless 2.4 GHz, Ethernet
<b>Operating modes</b>	Receiver or repeater

### System requirements

<b>PC</b>	Windows XP .NET 3.5
	Windows 7 .NET 3.5
	Network switch or access to company LAN network

# AP reless tea ra o tor ste

## How does it work?

A head unit assembly mounted on the pipe upstream of the trap to be monitored 'listens' to the sound signature of the trap in operation. This sound signature is categorised and transmitted via 2.4 GHz wireless network to a central PC. The PC determines the trap condition and calculates any steam loss.

Each STAPS head unit assembly is powered by a long life Lithium battery (typical battery life of over 3 years). It can communicate directly to a receiver that is connected to the PC software via a LAN connection or via another intelligent head or repeater. The PC software can be installed onto a PC on the sites internal network, or onto a standalone local PC.

The STAPS head, repeater and receiver create a network and can communicate with each other, passing on the steam trap data to the supervisory PC. The illustration below illustrates a typical network.

## Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P014-01) supplied with the product.

### Disposal:

- The Lithium Thionyl Chloride battery must be disposed of in line with local legislation. It must be remembered that battery hazards remain even when the cells are discharged.
- The Piezo sensor should be disposed of in line with local lead disposal guidelines.

No other ecological hazard is anticipated with the disposal of this product. It should be disposed of within the local recycling procedures.

### How to order

Contact your local Spirax Sarco representative to arrange a site survey and installations.

## Spare parts

Only the parts listed below are available for the STAPS system. No other parts are supplied as spares.

### Available spares

Battery (SAFT LS 33600 3.6 V battery)	1
'O' ring spares kit	2
Head mounting bracket, 'U' bolt and wing nuts	8, 9, 10 and 19
Ethernet cable spares kit	15
Clamp, 'T' bolt and wing nut	5, 6 and 7
Power supply (US) spares kit	12 and 14
Front cover spares kit	3 and 4
Spare receiver mounting kit	6, 17 and 18

### How to order spares

Always order spare parts by using the description given in the column headed 'Available spares' and state the size and unit nomenclature that they are intended for.

### Example:

1 off Battery spares kit  
(SAFT LS 33600 3.6 V battery)  
and

1 off Wall mounting spares kit

These spares are for a 1/2" - 1 1/4" STAPS wireless steam trap monitoring system.

## SPIRA-tec® Steam Loss Detector System Type 30 (for use with SSL1 Sensor)

Steam Traps

Fault Detection

The SPIRA-tec® Type 30 Indicator is a portable, battery-operated instrument designed to detect the presence of a steam leak in a steam trap (when used with a sensor chamber) and to indicate this condition on an LED indicator.

### Limiting Operating Conditions

**Max. Ambient Temperature** 104°F (40°C)

### Construction Materials

The Indicator Box is a polyamide plastic enclosure housing the electronic circuit.

### Operation

Full instructions are included with each indicator. The indicator incorporates a test circuit which will show whether the battery needs renewing or the indicator is faulty. To test for steam loss, plug indicator into sensing chamber ahead of trap. In essence, a green light  $\surd$  means a trap which is working correctly, i.e. closing to steam, and a red light  $\times$  indicates a trap which is allowing steam to pass.

### Sample Specification

SPIRA-tec steam leak detection system shall be comprised of an in-line sensor chamber or trap with Integral Sensor and a portable indicator box and cable for test purposes.

Sensor chambers, fitted before each trap, shall have ductile iron or steel bodies with screwed or socket weld connections, and incorporate a level-sensing electrode.

The hand-held indicator box shall have positive colored pass and fail lights, an internal circuit check facility and be UL listed as intrinsically safe for use in hazardous locations. An indicator cable 4 feet shall be provided with each box.

Optional items shall include a hand-operated remote test box for testing either a single trap or up to 12 traps, an automatic remote electronic monitoring system for up to 16 traps, a blanking plug to prevent ingress of dirt and cable plug tails of either the push fit type or screw-on connection style.

The system shall test for steam loss by detecting the presence or absence of condensate using the difference in conductivities of water and steam. Trap operation shall be indicated by a green (pass) light or a red (fail) light on the indicator box.

### Indicator Cable

A four-foot-long indicator cable of twin core, Teflon insulated, Hytel sheathed cable is provided with the indicator. It has connections on the ends for the Sensor Chamber or trap (if trap has Integral Sensor) and the Type 30 indicator. The Hytel sheathing will withstand 230°F (110°C).

Plug into SSL1 Sensor on sensor chamber, IFT with SSL1, strainer connector with SSLI (IPC20, IPC21).

### Dimensions (nominal) in inches and millimeters

A	B	C	Weight (without battery)
6.2	2.4	1	4.6 oz
157	62	25	130 g

### Spare Parts

The indicator cable is available as a spare part. To order, specify cable only.

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

TI-2-700-US 06.04

# SPIRA-tec® Steam Loss Detector System Type 30

## Purpose

The SPIRA-tec trap failure indicator is designed to indicate whether a steam trap is working correctly. It consists of a permanently installed sensor chamber and an indicator which is plugged into the sensor chamber for testing and removed when the testing is completed.

## Operation

### Trap Working

Condensate flows to the steam trap, under the weir. A small hole in the top of the weir balances the pressure on either side and ensures that the sensor on the upstream side is submerged in condensate. When the sensor is connected to the indicator, the circuit is complete and gives a green ✓ signal.

### Trap Passing Steam

Steam volume in the sensor chamber increases, raising the pressure difference across the weir. The upstream condensate level drops to expose the sensor, breaking the circuit to give a red ✗ signal.

## Installation

The sensor chamber with SSL1 sensor should be fitted immediately upstream of the trap, in a horizontal line with the direction of flow according to the arrow on the body, or a trap with Integral SSL1 Sensor.

The cable from the indicator should be disconnected from the sensor chamber or remote test point after checking.

Air and other incondensable gases present at the trap on start-up should be allowed to dissipate to avoid a false red signal. Blast discharge traps may cause a temporary red flicker, but green over most of the cycle shows the trap to be working properly.

## Batteries

Type 30 Indicator – One 9 volt battery.

## Component Specifications

TIS 2.701, Sensor Chambers

TIS 2.702, Remote Test Points

TIS 2.704, Automatic Monitor

### Intrap Sensing

### Chamber Sensing

IPC20 and IPC21 are strainer connectors with a spiratec SSL1 Sensor

## SPIRA-tec® Sensor Chambers ST14, ST16, ST17

Steam Traps  
Fault Detection

The Sensor Chamber is installed upstream of the steam trap as part of the SPIRA-tec® steam trap fault detection system. The chamber is supplied with a drilled and tapped connection for the SPIRA-tec® sensor (standard or waterlogging) which is supplied separately (see other side). Steam trap status is indicated on a portable indicator (Type 30) or remote monitor (R16C & R16E).

 temperature

### Sample Specification

SPIRA-tec® steam leak detection system shall consist of an in-line sensor chamber and a portable or remote indicator box and cable for test purposes.

Sensor chambers, fitted before each trap, shall have ductile iron, steel, or stainless steel bodies with screwed, socket weld or flanged connections, and incorporate a sensing element.

The hand-held indicator box shall have positive colored pass and fail lights, an internal circuit check facility. An indicator cable 4 feet long shall be provided with each box.

Optional items shall include a hand-operated remote test box for testing either a single trap or up to 12 traps, an automatic remote electronic monitoring system for up to 16 traps, a blanking plug to prevent ingress of dirt, and cable plug tails of either the push-fit type or screw-on connection style.

The system shall test for steam loss by detecting the presence or absence of condensate using the difference in conductivities of water and steam. The system shall also test for traps failed, closed or blocked by detecting temperature drops at the steam trap. Trap operation shall be indicated by a green (OK) light or a red (fail open) light, or an amber (fail closed) light on the indicator box.

### Installation

The sensor chamber should be installed immediately upstream of the trap (close coupled) in a horizontal position with the direction of flow according to the arrow on the body.

### Limiting Operating Conditions

Max. Operating Pressure (PMO)      464 psig (32 barg)  
 Max. Operating Temperature (TMO)      Saturated Steam Temperature

### Sample Specification

#### Standard Sensor:

Sensor shall be of stainless steel construction with suitable insulator. The sensor shall be capable of determining different conductivities associated with steam and condensate.

#### Waterlogging Sensor:

Sensor shall be of stainless steel construction with suitable insulator. The sensor shall be capable of determining different conductivities associated with steam and condensate. The sensor shall also detect temperature drops associated with steam traps that fail closed, are blocked, or not in use. Sensor shall be made with plug tail on right hand or left hand side.

### Installation

The sensor is installed into the side connection on the SPIRA-tec® sensor chamber. Chamber mounted upstream of trap as close as possible.

### Maintenance

The sensor should be removed periodically to inspect and clean the tip and insulator.

#### Determine sensor position:

If you were to straddle the pipe facing in the direction of flow, right hand sensor would be on right side and left hand on your left side.

**Note:** You must order sensor separately. Chamber does not have sensor installed when supplied

#### Sensor types:

SSLI Steam leakage for use output only with type 30, R1C and R16C

WLSI Steam leakage and water logging for use with R1C only.

WLSI with diode steam leakage and water logging for use with R16C only.

Spiratec products  
**shall not be used**  
 in hazardous areas and  
 explosive atmospheres.

## SPIRA-tec® Remote Test Point R1 and R12

Steam Traps

Fault Detection

The SPIRA-tec® Trap Leak Detection System is designed to indicate whether a steam trap is leaking steam. A Plug Tail is fixed permanently into the sensor chamber, and this is then wired to the remote test point sited at any convenient point. Trap checking is then carried out by plugging into the remote test point rather than into the sensor chamber.

### Available Types

R1 test point, suitable for one sensor chamber.  
 R12 test point has a selection switch which can be used for checking up to 12 sensor chambers.  
 The plug tail is supplied with 4 feet (1.25 m) of wire. Any additional wire must be provided by the installer in accordance with the Installation and Operating Instructions.  
 PT 1 plug tail is available with plug in connection  
 PT 2 plug tail is available with screw on connection and brass angle pattern housing.  
 (PT 2 & PT 3 provide protection to IP67.)  
 Removing nut #1 allows a conduit adaptor to be connected to the M16 conduit thread on the housing, if cable protection is required.

**R1 \***  
 Maximum Ambient Temperature  
 176°F (80°C)

**R12**  
 Maximum Ambient Temperature  
 120°F (49°C)

\* For application where temperature exceeds 176°F — metal encloser is available (R1 only) consult factory.

Dimensions (nominal) in inches and millimeters				
Type	A	B	C	Weight
R1	3.2 82	3.1 80	2.1 55	0.4 lb 0.2 kg
R12	3.1 80	4.7 120	2.1 65	0.7 lb 0.3 kg

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
 In the interests of development and improvement of the product, we reserve the right to change the specification.

# SPIRA-tec® Remote Test Point R1 and R12

## Use in Hazardous Areas

The Type 30 Indicator is listed by Underwriters Laboratories, Inc., as intrinsically safe for use in hazardous locations (Class 1, Division 1 & 2, Groups A, B, C & D, in accordance with U.L. Standard 913) when used with the ST Sensor Chamber, R1 and R12 remote test points.

The R1 and R2 are also approved for use in hazardous locations by BASEEFA under BS 5501, Parts 1 & 7. The enclosure is rated to IP 20 under BS 5490. 1977.

## Permissible Interconnecting Cables

The total Capacitance, Inductance and Inductance to Resistance (L/R) ratio of cables used in hazardous areas, must not exceed the following values:

Group	Capacitance in mF	Inductance in mH	or L/R ratio in mH/ohm
II C	0.3	0.22	19
II B	0.9	0.66	57
II A	2.4	1.76	152

## Installation

- Decide on the most convenient cable entry. Remove the front cover by taking out the four securing screws and drill the required hole in the side or back of the test point. Fit a suitable waterproof cable entry. (Fig. 1) Note: The R1 cover will only fit one way round.
- Secure the test point to a flat surface using the four mounting holes outside the sealed enclosure.
- Connect the Plug Tail PT1, PT2, or PT3 into the pipeline sensor chamber. Extend the 4-ft (1.25 m) of cable provided by connecting on a suitable; length of twin core cable. The type of cable is not critical – lightweight wire with 20 gauge conductors or 7/0.2 multi-strand wire will suffice. Similarly, the type of connection is not critical, but it should be made waterproof if exposed to moisture. The extension cable should be passed through the cable entry (Fig 2).
- In the case of the R1, connect the extension to the terminals inside the cover.
- In the case of R12, connect the extension from all red or green wires to the numbered terminals on the edge connector, noting the number of each sensor. The test sheet provided can be used for this purpose. Extensions from all the blue wires should be connected to the square ground bar in the base of the box. With screw heads facing outwards, push the edge connector onto the printed circuit board (Fig. 3).
- Replace the front cover and the four securing screws.

## To Operate

Plug the indicator cable into the socket provided and use the indicator in accordance with its instructions.

In the case of the R12, the rotary switch should be used to select the sensor to be checked.

## R1C Steam Trap Failure Monitor

Steam Traps

Fault Detection

The R1C steam trap failure monitor will monitor the performance of a single steam trap when used in conjunction with a Spiratec sensor chamber and sensor. It will indicate whether a trap is operating correctly, passing live steam or has failed closed by means of colored trap status lights on the unit. Analog and digital outputs allow it to be connected directly to BEMS/EMS to indicate steam trap status remotely.

### SYSTEM COMPONENTS

To detect a steam trap that is leaking steam, a standard SS1 Spiratec sensor combined with a Spiratec sensor chamber is used. To detect a steam trap that is leaking steam or is waterlogged, a WLS1 Spiratec waterlogging sensor assembly combined with a Spiratec sensor chamber is used.

### CONSTRUCTION MATERIALS

Body Cast malleable iron, black enamel finish.

### TECHNICAL DATA

Enclosure rating IP65 (when fitted with correct cable glands)

Supply voltage: Voltage required:  
 4-20 mA output **not used** Separate 9-30 Vdc, <35 mA  
 4-20 mA output **used** Separate 22-30 Vdc, <35 mA

#### R1C operation:

Trap status:	Status lights:
Trap operating correctly	Red and orange lights <b>OFF</b> Green light <b>FLASHING</b>
Trap leaking steam	Red light <b>ON</b> Green light <b>FLASHING</b>
Trap blocked or waterlogged	Orange light <b>ON</b> Green light <b>FLASHING</b>
Trap cold but free of condensate (this is a common state during system start-up or when the system is shut down).	Red and orange lights <b>ON</b> Green light <b>FLASHING</b>

During normal operation, the green light flashes **ON** every second to show that electrical power is connected to the R1C and that it is operating correctly.

### CONNECTIONS

The R1C enclosure is a circular conduit box with M20 threaded entry holes. To maintain resistance to moisture, use a suitable cable gland between the R1C and the Spiratec sensor (Type SS1 or WLS1). If the cable to the BEMS/EMS passes through a conduit, make sure that the threaded connection to the R1C is water-tight to maintain the IP65 enclosure rating. Details of electrical connection are supplied with the product.

### INSTALLATION

The Spiratec sensor chamber is installed immediately upstream of the trap being monitored in a horizontal pipeline. Full details are given in the technical literature supplied with the products.

The R1C should be installed within 30 ft. of the Spiratec sensor chamber. It is designed to form part of a conduit cable protection system but may be fixed to any convenient surface using bulkhead clamps.

### STEAM LEAK DETECTION PERIOD

Internal switches in the R1C allow the steam leak detection period to be set at various intervals. This helps to prevent nuisance alarms which may be caused by intermittent interruptions in condensate flow under normal operating conditions.

### CONDENSATE CONDUCTIVITY LEVELS

Internal switches in the R1C allow the condensate conductivity levels to be adjusted to accommodate local conditions. The purity of the steam is directly related to its conductivity. Therefore, the multiple settings cover a wide range of systems.

### TRAP WATERLOGGING TEMPERATURE LEVELS

Internal switches in the R1C allow the waterlogging temperature levels to be set at one of seven pre-set temperatures. Because of relation between steam pressure and temperature, each steam trap can be monitored as closely as desired.

As supplied, the R1C comes factory set as follows:

Channel	Failure Detection	Notes
Leak detection period	22 minutes	The trap must leak steam for 22 minutes before the R1C signals a fault.
Leak detection	4.8µS	The conductivity of the condensate in the sensor chamber must be greater than 4.8 microsiemens for correct operation.
Waterlogging detection temperature	185°F	The condensate in the sensor chamber must cool below the R1C signals a waterlogging fault.

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

# R1C Steam Trap Failure Monitor

## OUTPUT SIGNALS FOR REMOTE INDICATION OF TRAP STATUS

### Digital Outputs

**PNP open collector output** - use this output to connect the R1C to a BEMS/EMS whose digital inputs are pulled down to 0 volts. The pnp outputs act like switches connected to the R1C's power supply. During normal trap operation, the pnp outputs will switch ON and give out a voltage equal to the R1C's power supply minus 0.4 V. Their output resistance in this state is 220 ohms. If the trap fails, one of the pnp digital outputs will switch OFF.

**NPN open collector outputs** - use this output option to connect the R1C to a BEMS/EMS whose digital inputs are pulled up to a positive voltage. The npn outputs act like switches connected to 0 volts. During normal trap operation, the npn outputs will switch ON, giving out 0 volts with an output resistance of 220 ohms. If the trap fails, one of the npn digital outputs will switch OFF.

Trap Status	R1C Digital Outputs	
	Waterlogged	Steam Leak
Trap operating correctly	On	On
Trap leaking steam	On	Off
Trap blocked or waterlogged	Off	On
Trap cold, but free of condensate (or R1C failure)	Off	Off

### Analog Output:

An analog output is available as standard for use with BEMS/EMS's that operate on an analog input signal. Setting details are given below:

### Maintenance

There are no user serviceable parts in the R1C.

### How to Specify

- 1 - Spirax Sarco R1C steam trap failure monitor (pnp digital outputs), or
- 1 - Spirax Sarco R1C steam trap failure monitor (npn digital outputs)

Trap Status	Nominal Output Current from R1C	Recommended BEMS/EMS Alarm Threshold Settings
Trap operating correctly	20 mA	23.0 mA > setpoint > 17.5 mA
Trap leaking steam	15 mA	17.3 mA > setpoint > 12.5 mA
Trap blocked or waterlogged	10 mA	12.5 mA > setpoint > 7.5 mA
Trap cold, but free of condensate (or R1C failure)	4 mA	7.5 mA > setpoint > 0 mA

The current output from the R1C is derived from an internally powered loop and is capable of driving into an impedance of at least 550 ohms. In practice, this means that the maximum permissible distance between the R1C and the BEMS/EMS will be governed by the type of connecting cable used.

## SPIRA-tec® Automatic Steam Trap Monitor R16C

Steam Traps

Fault  
Detection

The SPIRA-tec® R16C is an automatic steam trap monitor for up to 16 steam traps. Remotely mounted, it continuously scans electronically up to 16 Spira-tec® Sensor Chambers and indicates when steam wastage or waterlogging occurs at any of the traps being monitored. A Sensor is screwed into each Sensor Chamber and is connected by wiring to the R16C which is sited at a convenient point.

When all the steam traps being monitored are working correctly, a single green light will be illuminated. If one or more of the steam traps is failing, then the corresponding "fail" lights (of which there are thirty two) are illuminated and the green light is extinguished.

The R16C, which is continuously operating, will indicate at a glance that either all the traps are operating correctly, or that there is a failure of any particular identified trap or traps.

The unit can be interfaced with most present day computer controlled Building Management Systems, through a pair of volt free contacts, which will open on trap failure.

### Available Types

R16C steam monitor is available as standard for use with mains supplies at 96-240Vac or 24Vac. The monitor is supplied for wall or panel mounting.

### Technical Data

Supply voltage	96-240Vac $\pm 10\%$ or 24 Vac $\pm 10\%$	
Supply frequency	50 - 60 Hz	
Supply current consumption	50 mA	
Environmental limits	Operating temperature range	0°C to 50°C
	Maximum operating relative humidity	80% up to 31°C decreasing linearly to 34% at 50°C
	Maximum altitude	2 000 m above sea level
	Maximum voltage	24 Vac/dc
Relay rating	Maximum current	0.5A
	Maximum power	10W
Enclosure rating	IP65 with correct cable glands (wall mounting unit only)	
Electrical connections	Screw terminals	

If cable protection is required, a conduit adaptor can be connected to the M16 conduit thread on the housing after removing the nut (1). The plug tail is supplied with 1.25m of cable. Any additional cable must be provided by the installer in accordance with the Installation Instructions.

Note: The type of cable is not critical, but a lightweight cable with 20 gauge conductors of 7/0.2 (0.22mm<sup>2</sup>) multi-strand cable will suffice.

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

# SPIRA-tec® Automatic Steam Trap Monitor R16C

## Wall Mounting

## Dimensions (nominal) in inches and millimeters

Wall Mounting		A	B	C	D	E	F	G	H	J	K	Weight
7.9	5.4	6.7	2.0	5.1	6.7	3.9	1.2	3.6	2.0	4.0 lb		
201	138	169	50	130	170	100	30	92	52	1.8 kg		
Panel Mounting		A	B	C	D	E	F	Weight				
7.6	5.7	4.1	5.5	7.3	1.6	3.4 lb						
192	145	105	140	186	40	1.53 kg						

## To Use as Master Box

The R16C can be installed on a cascade basis. One "master" box will monitor up to 16 "local" boxes. A red light on the master box will indicate which "local" box is registering a leaking trap. Inspection of that local box will then identify the specific trap which is failing.

## Trap Diffuser DF1, DF3 and Three Way Test Valve

Steam Traps  
Fault Detection

### Description

The **DF Series Trap Diffuser** is a compact unit designed to be fitted to the outlet of a steam or liquid drain trap. The DF Diffuser reduces noise and erosion by cushioning high velocity discharge.

<b>Model</b>	DF1 & DF3
<b>Sizes</b>	1/2" & 3/4"
<b>Connections</b>	NPT
<b>Construction</b>	Stainless Steel
<b>Options</b>	BSP Connection DF1 SW Inlet only DF1

### Typical Applications

The DF Series Diffuser can be fitted to any trap where conditions promote blast discharge similar to that associated with balanced pressure, inverted bucket or Thermo-Dynamic® traps.

### Limiting Operating Conditions

**DF1 Max. Operating Pressure (PMO)** 915 psig/63 barg

**DF3 Max. Operating Pressure (PMO)** 300 psig/21 barg

### Construction Materials

No.	Part	Material
1	Case	Stainless Steel
2	End Boss Screwed Socket Weld	Stainless Steel Stainless Steel
3	Internals	Stainless Steel
4	Screen	Stainless Steel

### Installation

The DF Series Diffuser should be fitted on the outlet side of a steam trap or liquid drainer with a suitable fitting to ensure that the discharge of condensate is towards the ground or some safe enclosure.

### Sample Specification

The trap diffuser shall be all stainless steel with a knitted and compacted wire mesh diffusing element.

### Dimensions (approximate) in inches & millimeters

Size	A	B	C	Weight (DF1)
<b>DF1 1/2"</b>	2.3 59	1.5 40	1.1 27	.51 lb .23 kg
<b>DF1 3/4"</b>	2.3 60	1.5 40	1.3 32	.51 lb .23 kg
<b>DF3 1/2"</b>	3.8 97	1.8 46	2.1 53	1.4 lb .63 kg
<b>DF3 3/4"</b>	3.8 97	1.8 46	2.1 53	1.4 lb .63 kg

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

# Trap Diffuser DF1, DF3 and Three Way Test Valve

The TWT steam trap test valve is designed to have a combination inlet or outlet isolation/blowdown valve capability. Unit can be used with any small size steam trap typically in drip or tracer service.

## MSC Manifolds for Steam Distribution and Condensate Collection

Steam Traps  
Trap Station & Manifold

### Description

The type MSC forged steel manifolds centralize steam distribution and condensate collection for up to 12 sources.

Both models have integral piston valves with a variety of connections, making them particularly well suited for tracing applications.

The compact design provides easy access for trap maintenance and monitoring, while the mounting arrangement permits quick installation.

The condensate collection manifold includes an internal siphon pipe to promote even temperature distribution and ensure single-phase discharge of condensate.

All units are hydro tested to 1.5 times design pressure, and painted with industrial heat resistant coating (gray) with a maximum temperature of 850°F

### Operation

In operation the piston valve should be either fully open or fully closed. **Throttling service is not recommended.**

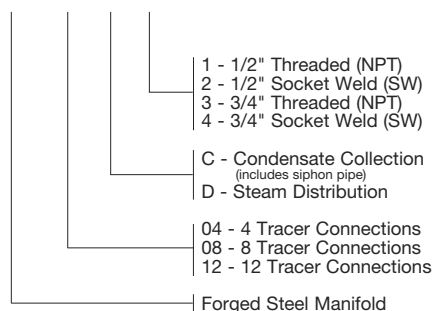

As the piston valve has such a large sealing area it is not necessary to use a valve key to ensure dead tight shut-off.

### Technical Data

Body design rating	ANSI Class 300 (PN50)
PMA	740 psig @ 100°F (51 Bar g @ 38°C)
TMA	797°F @ 406 psig (425°C @ 28 bar g)
Min allowable temp	-20°F (-29°C)
PMO (Sat. steam)	600 psig @ 500°F (41 bar g @ 260°C)
Hydrotest pressure	1,110 psig (76 bar g)
N° of connections	4, 8, 12
Connection sizes	1/2", 3/4"
Connection types	NPT, SW to ANSI B16.11 Cl. 3000
Piston valve CV	2.1 (per valve - both sizes)

### MANIFOLD NOMENCLATURE

MSC 08 C 1

### Alternatives

Flow direction when used for steam distribution duty

Flow direction when used for condensate collection duty

## Safety information, installation and ancillaries

For full details see the Installation and Maintenance Instructions supplied with the product.

### General

These manifolds have been designed for vertical installation. The back is provided with M12 threaded connections for ease of installation by attaching to a supporting structure. For ease of installation it is recommended that spacers are fitted to give the manifold a stand-off of at least 2" (50mm). Following installation it is recommended that the manifold is insulated to minimize radiated heat losses and to protect personnel from burn risks. For convenience the following mounting kits (comprising 50mm spacers and M12 studs and nuts) and thermal insulation blankets are available.

### Ancillaries

Part Numbers	MSC04	MSC08	MSC12
Installation Kit	74287	74288	74289
Thermal Blanket (Steam)	1170063	1170263	1170463
Thermal Blanket (Condensate)	1170062	1170262	1170462

Installation view from above

## Steam distribution duty

The recommended installation is with the steam inlet connection at the top of the manifold. A trap set should be fitted to the bottom of the manifold. The discharge from this trap set should ideally be returned. If it is to be discharged to atmosphere we recommend that a diffuser is fitted.

## Condensate collection duty

The recommended installation is with the condensate outlet at the top. The bottom of the manifold should be fitted with a stop valve for blowdown purposes. Again, we recommend that a diffuser is fitted.

## How to order

**Example:** 1 off Spirax Sarco MSC08 steam distribution and condensate collection manifold in A105N forged carbon steel body with integral piston valves having 8 x 1/2" socket weld connections to ANSI B 16.11 Class 3000.

## Vertical Condensate Collection Manifold – Fabricated

Steam Traps  
Trap Station & Manifold

The CMAV condensate collection manifold is a fabricated assembly designed for vertical installation to facilitate centralized recovery of condensate from up to 12 sources. Condensate is collected within the shell and discharged through the top via an internal siphon pipe. The water seal created by the siphon tube promotes even temperature distribution and ensures single phase discharge of condensate. The compact design provides easy access for trap maintenance and monitoring, while the mounting and connection arrangement permits fast installation.

# Vertical Condensate Collection Manifold Fabricated

## TYPICAL HOOK-UP FOR 8 CONNECTION MANIFOLD

### SAMPLE SPECIFICATION

The condensate collection manifold shall be Spirax Sarco model CMA12V designed for vertical orientation to accommodate up to 12 condensate sources.

### CONSTRUCTION FEATURES

The unit shall include an internal siphon pipe designed to provide a water seal at all condensate loads to ensure single phase discharge and even temperature distribution. The assembly shall have a 1" discharge connection at the top and a 3/4" drain connection that permits complete drainage during maintenance. Support brackets are to be provided for fast installation. Connections shall be provided on up to 3 sides and spaced to accommodate any valve orientation without interference from adjoining piping. The design is to be compact enough such that all traps and other connected equipment are within easy reach for servicing. Construction shall consist of ASTM A106 Gr. B carbon steel 2-1/2" Sch. 80 pipe with ANSI Cl. 3000 connections. Welding is to be performed in accordance with Section IX of the ASME Boiler & Pressure Vessel Code. The assembly shall be hydrostatically tested to 1.5 times design pressure, sandblasted, and provided with one coat industrial heat resistant coating (gray) maximum temperature 850°F.

### INSTALLATION

The manifold is to be installed vertically with the condensate discharge connection at the top as shown. Isolation valves, steam traps, strainers, and other required equipment are attached on up to 3 sides at the connections provided. Mounting is accomplished using the brackets supplied on the back side of the unit. For outdoor installations, a freeze protection device fitted to the 3/4" drain connection is recommended.

### OPTIONS

Each manifold can be supplied with a wide selection of valves, traps, and other equipment as a completely fabricated and tested assembly. Consult factory for specific applications.

### TYPICAL APPLICATIONS

The manifold can be utilized wherever multiple sources of condensate from steam traps need to be centrally collected in a vertical orientation. This includes steam tracing, light condensate-producing equipment, separators, and steam main drips.

## Vertical Steam Distribution Manifold – Fabricated

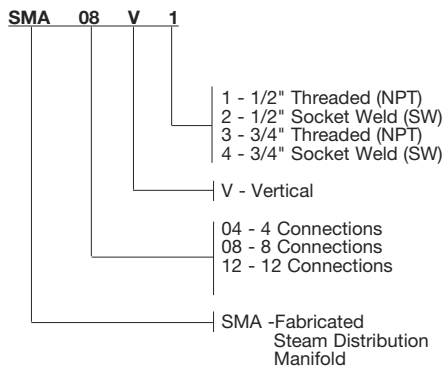

Steam Traps  
Trap Station & Manifold

The SMAV steam distribution manifold is a fabricated assembly designed for vertical installation to provide up to 12 steam distribution points. The compact design provides easy access for isolation valve operation and maintenance, while the mounting and connection arrangement permits fast flexibility of installation. Used in conjunction with the forged or fabricated condensate collection manifolds.

Model	SMAV
<b>PMA</b>	720 psig at 508°F (50 barg at 264°C)
<b>Hydrotest Pressure</b>	1,080 psig (74 barg)

# Vertical Steam Distribution Manifold Fabricated

TYPICAL HOOK-UP OF 8 CONNECTION MANIFOLD

## SAMPLE SPECIFICATION

The steam distribution manifold shall be Spirax Sarco model SMA12V designed for vertical orientation to provide up to 12 steam distribution points.

## CONSTRUCTION FEATURES

The assembly shall have a 2" inlet connection at the top and a 3/4" drain connection that permits complete drainage during maintenance. Support brackets are to be provided for flexibility of installation. Connections shall be provided on up to 3 sides and spaced to accommodate any valve orientation without interference from adjoining piping. The design is to be compact enough such that all connected equipment are within easy reach for servicing. Construction shall consist of ASTM A106 Gr. B carbon steel 2" Sch. 80 pipe with ANSI Cl. 3000 connections. Welding is to be performed in accordance with Section IX of the ASME Boiler & Pressure Vessel Code. The assembly shall be hydrostatically tested to 1.5 times design pressure and supplied with one coat of industrial heat resistant coating (gray) maximum temperature 850°F

## INSTALLATION

The manifold is to be installed vertically with the steam inlet connection at the top as shown. Isolation valves and piping are attached on up to 3 sides at the connections provided. Mounting is accomplished using the brackets supplied on the back side of the unit. An appropriately sized steam trap fitted to the 3/4" drain connection is recommended.

## OPTIONS

Each manifold can be supplied with a wide selection of isolation valves and drainage trap as a completely fabricated and tested assembly. Consult factory for specific applications.

## TYPICAL APPLICATIONS

The SMAV manifold can be utilized wherever multiple sources of steam need to be centrally distributed in a vertical orientation, such as steam tracing applications.

Condensate Recovery INDEX

## The Pivotrol® Pump Patented PTC Pressure Powered Pump

### Description

The Spirax Sarco **Pivotrol® Pump** (patented) is a non electric pump which transfers high temperature condensate, or other liquids from a low point, low pressure or vacuum space to an area of higher pressure or elevation. This self-contained unit including **PowerPivot®** technology (patented) uses steam, compressed air or any other suitable pressurized gas as the pumping force. **The standard Pivotrol® Pump (patented) will handle liquids from 0.9 to 1.0 specific gravity.**

Model	PTC	PTC-T-bone
<b>PMO</b>	200 psig (13.8 barg)	
<b>Sizes</b>	2" x 2", 3" x 2"	3" x 3"
<b>Connections</b>	Cover: NPT Liquid: ANSI 150/NPT	
<b>Construction</b>	Ductile Iron	
<b>Warranty</b>	3 Million Cycles or 5 Year Warranty, whichever number is achieved first. Lifetime Warranty on Spring	
<b>Options</b>	Pump modified to handle liquids down to 0.65 specific gravity, 5 Million Cycles or 5 Year Warranty	

### Accessories

- Gauge glass with brass cocks.
- Reflex type gauge glass -Insulation cover.

**Capacities**  
For sizing and selection data, see TI-5-030-US

### Standards

The product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the **CE** mark when so required (must be specified at the time of order).

### Operating Characteristics

Pump discharge per cycle –	7.1 gal (26.9 l) <i>Nominal</i>
Average instantaneous discharge rate –	See TI-5-030-US
Steam/Air Consumption –	3 lbs. per 1000 lbs. of liquid pumped

**For increased service life –  
Operate pump with motive pressure 15-20 psig above pump back pressure.**

### Sample Specification

The pump shall be Spirax Sarco Pivotrol® Pump (patented) operated by steam, compressed air or other pressurized gas to 200 psig, which does not require any electrical energy. The pump shall have stainless steel, split disc check valves on the inlet and outlet connections. The pump shall contain Spirax Sarco PowerPivot® (patented) inside to ensure longevity and reliability of the pump. The Pivotrol® Pump (patented) shall include an Inconel spring with a lifetime warranty and be supplied with an integral cycle counter to monitor a 3 million cycle or 5 year warranty, which ever number is achieved first. When required the pump shall be supplied with a gauge glass and custom designed insulation jacket.

### Installation

## The Pivotrol® Pump Patented PTF Pressure Powered Pump Series

### Description

The Spirax Sarco **Pivotrol® Pump** (patented) is a non electric pump which transfers high temperature condensate, or other liquids from a low point, low pressure or vacuum space to an area of higher pressure or elevation. This self-contained unit including **PowerPivot®** technology (patented) uses steam, compressed air or any other suitable pressurized gas as the pumping force. **The standard Pivotrol® Pump (patented) will handle liquids from 0.9 to 1.0 specific gravity.** Suitable for use in hazardous environments and volatile fluid pumping applications. See IM-5-201-US for full details.

### Standards

The product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the **CE** mark when so required (must be specified at the time of order). **CE** marked products are not ATEX approved, therefore are not suitable in hazardous environments or volatile fluid pumping applications in the EU.

### Operating Characteristics

Pump discharge per cycle –	8.4 gal (31.8 l) Nominal
Average instantaneous discharge rate –	90 gpm (5.7 l/s)
Average Steam Consumption –	3 lbs. per 1000 lbs. of liquid pumped
Average Air Consumption –	60 SCF per 1000 lbs. of liquid pumped
Filling head recommended above centerline of inlet check valve is 12" (305mm).	

### For increased service life –

**Operate pump with motive pressure 15-20 psig above pump back pressure.**

Standard recommended	12" (305mm)	42.8" (1087mm)
Max filling head	60" (1524mm)	90.8" (2306mm)
Min filling head	0" (0mm)	30.8" (782mm)

Max Number of Cycles per minute = 6

**Note:** See TI-5-020-US for cycle counter details.

## Pressure Shell Design Conditions

### PMA

**Max. Allowable Pressure** 300 psig @ 650°F (20.7 barg @ 343°C)

### TMA

**Max. Allowable Temperature** 650°F @ 300 psig (343°C @ 20.7 barg) with Reflex Gauge Glass:  
600°F @ 300 psig (315°C @ 20.7 barg)

## Sample Specification

The pump shall be Spirax Sarco Pivotrol® Pump (patented) PTF-HP, operated by steam, compressed air or other pressurized gas to 300 psig, which does not require any electrical energy, and is capable of pumping liquids down to 0.88 specific gravity. The pump shall have stainless steel, split disc check valves on the inlet and outlet connections. The pump shall contain Spirax Sarco PowerPivot® (patented) technology to ensure longevity and reliability of the pump. The Pivotrol® Pump (patented) shall include an Inconel spring with a lifetime warranty and be supplied with an integral cycle counter to monitor a 3 million cycle or 5 year warranty, whichever number is achieved first. When required the pump shall be supplied with a reflex gauge glass.

## Installation

Full details are provided in IM-5-201-US which accompanies the product.

## Maintenance

Complete installation and maintenance instructions are given in IM-5-201-US, which accompanies the product.

## The Pivotrol® Pump Patented PTF-HTF Pressure Powered Pump

### Description

The Spirax Sarco **Pivotrol® Pump** (patented), featuring reliable **PowerPivot®** technology (patented) is specifically designed for use on heat transfer fluids, with specific gravity of .65 - .79, in a closed loop system. This self-contained unit uses the pressurized heat transfer fluid vapor phase as the pumping force to transport condensed heat transfer fluid from a low point, or low pressure space to an area of high pressure or elevation. Suitable for use in hazardous environments and volatile fluid pumping applications. See IM-5-201-US for full details.

<b>Model</b>	<b>PTF-HTF</b>
<b>PMO</b>	200 psig (13.8 barg)
<b>Sizes</b>	3" x 2"
<b>Connections</b>	Inlet & Outlet: ANSI 300 RF with surface finish 125-250 μ in. serrated concentric or spiral grooves per ANSI B16.5 Motive & Exhaust: SW ANSI B16.11 Drain: (2) ANSI 300 RF with surface finish 125-250 μ in. serrated concentric or spiral grooves per ANSI B16.5
<b>Construction</b>	ASME Coded Steel
<b>Warranty</b>	Lifetime Warranty on Spring

### Accessories

- Gauge glass with brass cocks.
- Reflex type gauge glass -Insulation cover.

### Capacities

For sizing and selection data, see TIS 5.030

Condensate Recovery

Non-Electric Pumps

### Operating Characteristics

Pump discharge per cycle – 8.4 gal (31.8 l) Nominal  
Average instantaneous discharge rate – 90 gpm (5.7 l/s)

For increased service life –  
Operate pump with motive pressure 15-20 psig above pump back pressure.

### Construction Materials

No.	Part	Material	Spec
1	Body	Fabricated Steel	ASME coded
2	Cover	Cast Steel	ASTM SA216 WCB
3	Cover Gasket	Spiral-Wound Flexitallic Type 'LS'	
4	Steam Inlet Valve Assembly	Stainless Steel	
5	Steam Inlet Valve Gasket	Stainless Steel	
6	Exhaust Valve Assembly	Stainless Steel	
7	Exhaust Valve Gasket	Stainless Steel	
8	Baffle	Stainless Steel	
9	Push Rod Assembly	Stainless Steel	
10	Mechanism Support	Stainless Steel	
11	Bushing Mounting Plate (Bushings)	Stainless Steel Carbide	
12	Spring Anchor	Carbide	
13	Spring	Inconel	
14	Float Arm Assembly (Pivots)	Stainless Steel Carbide	
15	Float Pivot	Stainless Steel	
16	Pin	Stainless Steel	
17	Paddle	Stainless Steel	
18	Float	Stainless Steel	
19	Screws (typical)	Stainless Steel	

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.

## PTF-HTF Pressure Powered Pump

### Dimensions (nominal) in inches and millimeters

A	B*	C	D	E	F	G	H	I	J	K	L	M	Weight
34.6	33.4	12.2	11.6	2.0	16.0	15.0	30.0	19.0	9.5	6.1	4.4	.6	210 lb
879	848	310	295	51	406	381	762	483	241	155	112	15	95.3 kg

\*B Dimensions is to the centerline of the motive supply inlet.

### Limiting Operating Conditions

#### PMO

**Max. Operating Pressure** 200 psig (13.8 barg)  
 Minimum motive differential required: 5 psig

Filling Head Requirements	Filling Head Above Pump Cover	Filling Height From Base of Pump
---------------------------	-------------------------------	----------------------------------

Standard recommended	12" (305mm)	42.8" (1087mm)
Max filling head	48" (1219mm)	78.8" (2002mm)
Min filling head	-1" (-25mm)	29.8" (757mm)

Max Number of Cycles per minute = 6

### Pressure Shell Design Conditions

#### PMA

Max. allowable pressure 200 psig @ 750°F (13.8 barg @ 399°C)

#### TMA

Max. allowable temperature 750°F @ 200 psig (399°C @ 13.8 barg)

### Check Valves

Two check valves are required, but not supplied with the pump.

**Recommended check valves are 2" and 3" Velan Model F00-1114C-02AA ANSI 300 RF flanged cast steel swing type valves.** (All capacity data established with Velan check valves as specified.)

### Sample Specifications

The pump shall be Spirax Sarco PTF-HTF, Pivotrol® Pump (patented) featuring reliable PowerPivot® technology (patented) specifically designed for use on heat transfer fluids in a closed loop system, which does not require any electrical energy (.65 - .79 specific gravity range). The PTF-HTF, Pivotrol® pump (patented) shall include an Inconel spring with a lifetime warranty and 3 year warranty.

### Installation

Full details are given in IM-5-201-US, which accompanies the product.

### Maintenance

Complete installation and maintenance instructions are given in IM-5-201-US, which accompanies the product.

## The Pivotrol® Pump Patented PTF4 (High Capacity) Pressure Powered Pump

### Description

The Spirax Sarco **Pivotrol® Pump** (patented) is a non electric pump which transfers high temperature condensate, or other liquids from a low point, low pressure or vacuum space to an area of higher pressure or elevation. This self-contained unit including **PowerPivot®** technology (patented) uses steam, compressed air or any other suitable pressurized gas as the pumping force. **The standard Pivotrol® PTF4 Pump (patented) will handle liquids from 0.88 to 1.0 specific gravity.** Suitable for use in hazardous environments and volatile fluid pumping applications. See IM-5-201-US for full details.

Model	PTF4
<b>PMO</b>	200 psig (13.8 barg)
<b>Sizes</b>	4" x 4"
<b>Connections</b>	Inlet & Outlet: ANSI 150 flange NPT/SW Motive & Exhaust: NPT/SW
<b>Construction</b>	Fabricated Steel Body 200 psig ASME Code Stamped Stainless Steel Internals
<b>Warranty</b>	3 Million Cycles or 5 Year Warranty, whichever number is achieved first. Lifetime Warranty on Spring
<b>Options</b>	Gauge Glass Assembly Reflex

**Capacities**  
For sizing and selection data, see TI-5-030-US

### Standards

The product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the **CE** mark when so required (must be specified at time of order). **CE** marked products are not ATEX approved, therefore are not suitable in hazardous environments or volatile fluid pumping applications in the EU.

### Operating Characteristics

Pump discharge per cycle – 26.9 gal (101.8l) Nominal  
Maximum instantaneous discharge rate – 450 gpm (28 l/s)  
Steam/Air Consumption – See TI-5-030-US

**For increased service life – Operate pump with motive pressure 15-20 psig above pump back pressure.**

### Construction Materials

No.	Part	Material	Spec

## The Pivotrol® Pump Patented Selection and Sizing

### How to Select and Size

From the inlet pressure, back pressure and filling head conditions given below, select the pump size and check valve package which meets the capacity requirement of the application.

Specify pump body, type PTC or PTF. Select optional extras as required.

For GPM, multiply the capacities below by 0.002.

For kg/h, multiply the capacities below by 0.454.

For liquid specific gravities from 0.9 to 0.65, consult Spirax Sarco.

\* Back pressure is the lift height (H) in feet x 0.433 plus psig in return line, plus downstream piping friction pressure drop in psig calculated based on the maximum instantaneous discharge rate of the respective pump selected. (See TIS Sheets)

**Note: To achieve rated capacity, pump must be installed with check valves supplied by Spirax Sarco. Use of a substitute check valve may effect the performance of the pump.**

### Condensate load

Steam pressure available for operating pump	7000 lb/h
Vertical lift from pump to the return piping	80 psig
30 feet	
Pressure in the return piping (piping friction negligible)	25 psig
Filling head on the pump available	12 inches

### Solution:

1. Calculate "H", the total lift or back pressure, against which the condensate must be pumped. =  $(30 \times 0.433) + 25 = 38$  psig
2. From capacity table, with 80 psig inlet pressure and 40 psig back pressure, choose a 2" x 2" pump with stainless steel check valves, which has a capacity of 6,935 lb/h.

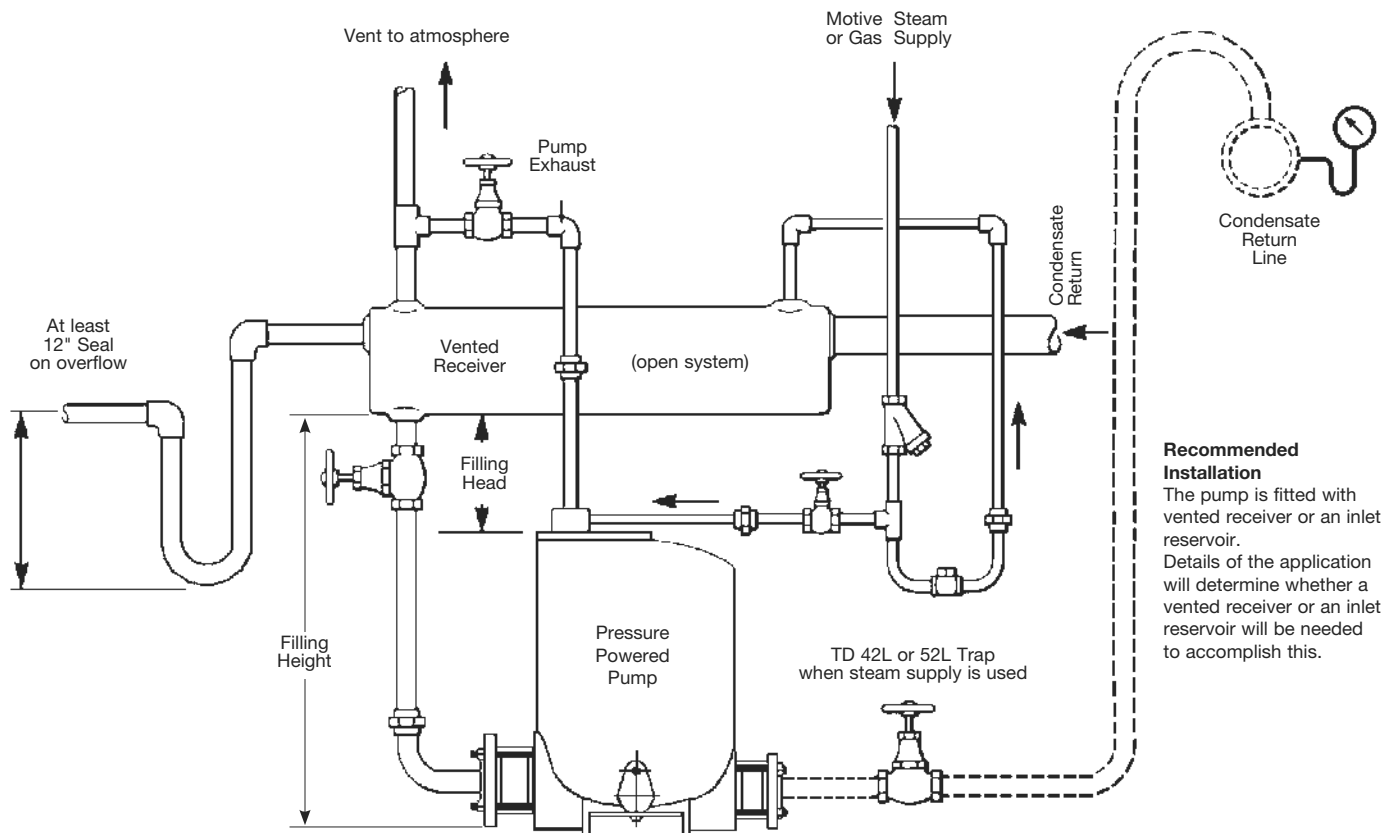

### Note from capacity multiplying factor charts:

- A. Pump capacity if filling head is 24":  $1.16 \times 6,935 = 8045$  lb/h
- B. Pump capacity using compressed air:  $1.12 \times 6,935 = 7767$  lb/h  
(% back pressure is 38–75=50%)

**Capacity lb/h** When installed with recommended filling head above top of pump.

Condensate Recovery

Non-Electric Pumps

In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-5-030-US 7.15

# The Pivotrol® Pump Patented Selection and Sizing

## Vented Receiver (Open System)

To drain condensate from a single or multiple source an "open" system, a vented receiver should be installed in a horizontal plane above and ahead of the pump. Sufficient receiver volume is needed above the filling head level to accept the condensate reaching the receiver during the pump discharge stroke. More important, the receiver must be sized to allow sufficient area for complete flash steam separation from the condensate. The chart below shows proper vented receiver sizing (per criteria set forth in the A.S.H.R.A.E. Handbook) based on the amount of flash steam present. If the receiver is sized as shown below, there will be sufficient volume for condensate storage and sufficient area for flash steam separation. The receiver can be a length of large diameter pipe or a tank.

### Pump size - up to 3"x 2"

Flash Steam up to —	Pipe Size		Vent Line
	Diameter	Length	Diameter
75 lb/h	4"	36"	1-1/2"
150 lb/h	6"	36"	2"
300 lb/h	8"	36"	3"
600 lb/h	10"	36"	4"
900 lb/h	12"	36"	6"
1200 lb/h	16"	36"	6"
2000 lb/h	20"	36"	8"

### Pump Size – PTF4

Flash Steam up to –	Pipe Size		Vent Line
	Diameter	Length	Diameter
1000 lb/h	16"	60"	6"
2000 lb/h	20"	60"	8"
3000 lb/h	24"	60"	8"
4000 lb/h	26"	60"	10"
5000 lb/h	28"	60"	10"
6000 lb/h	30"	72"	12"
7000 lb/h	32"	72"	12"
8000 lb/h	36"	72"	14"

### Capacity Multiplying Factors for other Filling Heads

Filling Head		Check valve and piping size, pump type			
Inches	mm	2" x 2" PTC/PTF	3" x 2" PTC/PTF	PTF-HP	PTF4
-3.0	-76	0.47	NA	NA	0.23

0.0	0	0.76	0.43	0.6	0.70
6.0	152	0.90	0.69	0.9	0.89
12.0	305	1.00	1.00	1.0	0.95
18.0	457	1.08	1.02	1.1	0.98
24.0	610	1.16	1.04	1.2	1.00
36.0	914	1.38	1.17	1.3	1.00
48.0	1219	1.48	1.25	1.4	1.08
60.0	1524	N/A	N/A	1.5	1.20

## Inlet Reservoir Piping (Closed System)

To drain condensate from a single piece of equipment in a "closed" system, a reservoir should be installed in a horizontal plane above and ahead of the pump. Sufficient reservoir volume is needed above the filling head level to accept the condensate reaching the reservoir during the pump discharge stroke. The chart below shows minimum reservoir sizing, based on condensate load, needed to prevent equipment flooding during the pump discharge stroke. The reservoir can be a length of large diameter pipe or a tank.

### Pump size - up to 3"x 2"

Liquid lb/h	Reservoir Pipe Size				
	3"	4"	6"	8"	10"
500 or Less	2'				
1000	2'				
1500	3'	2'			
2000	3.5'	2'	1'		
3000		3'	2'		
4000		4'	2'	1'	
5000		6'	3'	2'	
6000			3'	2'	
7000			3'	2'	
8000			4'	2'	
9000			4.5'	3'	2'
10,000			5'	3'	2'
11,000			5'	3'	2'

### Pump Size – PTF4

Liquid Load lb/h	Reservoir Pipe Size*			
	12"	16"	20"	24"
10,000	5'	3'	2'	
20,000	10'	7'	4'	
30,000		9'	6'	4'
40,000		12'	7.5'	6'
50,000			9'	6'
60,000			9'	6'

\* When BP/MP is less than 50%, these reservoir lengths can be reduced by 1/2.

### Capacity Multiplying Factors for Motive Gas Supply

(other than steam)										% Back Pressure VS. Motive Pressure (bp / MP)
2" and 3" x 2" PTC / PTF										
10%	20%	30%	40%	50%	60%	70%	80%	90%		Capacity Multiplying Factors

### To size the PTF4 in a closed system:

Establish available motive pressure.

Establish static back pressure on Pump/Trap combination.

Place established pressures in formula below:

- Pump Motive Pressure (psig) – min. VAV delta P (psig) > Back Pressure (psig)
- Capacity charts to be read as normal, i.e. at pump motive and back pressure.
- If, Pump Motive Pressure (psig) – min. VAV delta P (psig) < Back Pressure (psig), then isolate or remove VAV and multiply capacity by 0.77 to find reduced capacity without VAV.

### Sizing Example: 1

A closed system has the following conditions:

Motive steam available = 150 psig. Static Back Pressure = 45 psig.

### Open System.

PTF4

Capacity charts show capacity at 150 psig motive with 45 psig back pressure.

### Closed System.

The Vent Assist Valve on the PTF4 requires at least 75 psig differential pressure to operate in a closed system.

### To size the PTF4 pump:

Pump Motive Pressure – min. VAV delta P > Back Pressure.

150 psig – 75 psig > 45 psig

As the motive pressure is 150 psig and the VAV requires a minimum 120 psig to operate (75 + 45 = 120), this combination is sized correctly.

## The Pivotrol® Pump Patented Digital Cycle Counter

### Description

The monitoring of condensate return pump operation is an important activity for plant operations and maintenance personnel. The use of pressure powered pumps equipped with a digital cycle counter provides the ability to monitor pump operation, schedule preventative maintenance and estimate the amount of condensate recovered. The counter may operate in open and some closed loop condensate systems.

### Specifications

Counter	8 Digit LCD display — NEMA 4 X, IP65
Options	BSP Threaded Version (Standard Counter Only)

### Construction Materials

No.	Part	Material
1	Enclosure	Aluminum
2	Gaskets	
3	Housing	Stainless Steel
4	Sealing Nut	Stainless Steel and Teflon®
5	Insulator	
6	Probe	Stainless Steel
7	Plug Receptacle	Stainless Steel
8	Plug	Stainless Steel

### Limiting Operating Conditions

**External Operating Temperature Range**  
Counter: 14°F to 122°F (-10°C to 50°C)

**Maximum Sensor Pressure**  
PMO: 300 psig / 21 barg

**Maximum Operating Temperature**  
TMO: 500°F / 310°C

### Pump Capacities

Model	Approximate Gallons/Cycle
PTC	7.1 / 26.9L

## Enclosure Approvals

For FM approved enclosure:

CL I.

GR. A,B,C,D:

CL. II. GR. E,F,G;

CL. III.;

TYPE 4X

For CSA Class I Group A, conduit seal is required within 18 inches.

For FM approved enclosure:

CL. I, ZONE 1, AEx d IIC, IP66

For IECEX:

IECEX FMG 06.0003U, Ex d II C, IP68

For Ex:

II 2 GD Ex d II C; IP68; FTZU 04 ATEX 0265 U AMBIENT TEMP.: -40°C TO + 85°C (- 40°F TO 185°F)

**Battery is suitable for up to 10 years of uninterrupted operation.**

## Safety and Regulatory Compliance

Seating nut contains Teflon®.

This product is not intended to be submerged.

## Installation (see IM-5-020-US)

1. Place counter in 1/2" NPS (1/2" BSPT) hole in pump cover (only hole available)
2. Orientate counter in desired direction.
3. Screw sealing nut until wrench tight.

**Caution: Before installation or any maintenance is performed, ensure that all steam, condensate, air or gas lines are closed and internal pressure is relieved to prevent injury.**

**Plugs (7) & (8) should not be unscrewed and will void warranty.**

## Orientation (see IM-5-020-US)

The Digital Cycle Counter orientation may be changed from its original position in the Pivotrol cover and mechanism assembly.

**Caution: Before any maintenance is performed, ensure that all steam, condensate, air or gas has been closed and internal pressure is relieved to prevent injury.**

1. Unscrew sealing nut.
2. Twist cycle counter into desired position, ensuring cable remains in place.
3. Tighten sealing nut.

## Low-Profile Pressure Powered Pump™ PPEC

Spirax Sarco Pressure Powered Pump™ is a non-electric pump which transfers high temperature condensate or other liquids from a low point, low pressure or vacuum space to an area of higher pressure or elevation. This self-contained unit uses steam, compressed air or any other suitable pressurized gas as the pumping force. **The standard pressure powered pump will handle liquids from 0.9 to 1.0 specific gravity.**

Body Style	Iron	Steel	316 Stainless Steel
PMO	125 psig		
Sizes	1" & 1-1/2"		
Connections	NPT		
Construction	Cast Iron Body,	Cast Steel Body	Cast Stainless Steel Body
	Stainless Steel Internals, Bronze Check Valves Stainless Steel Ch.valves		Stainless Steel Internals, Stainless Steel Check Valves
Options	BSP Connections,		S.W. & BSP Connections,
	Pump modified to handle liquids down to 0.65 specific gravity		Pump modified to handle liquids down to 0.65 specific gravity

### Operating Characteristics

Pump discharge per cycle – 4.0 gal (15.14 l)  
Maximum instantaneous discharge rate – 30 gpm (1.9 l/s)  
Steam Consumption – 3 lbs. of steam per 1000 lbs. of liquid pumped.  
Air consumption – 100 SCF per 1000 lbs. of liquid pumped.

### Accessories

Gauge glass with brass cocks for iron pumps, steel cocks for steel pumps, and stainless steel cocks for stainless steel pumps; Pump insulation cover.

### Standards

With the exception of cast iron, this product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the CE mark when so required (must be specified at the time of order).

### Construction Materials

No.	Body Style	Part	Material

### Capacities

For sizing and selection data, see TI-5-202-US.

### Limiting Operating Conditions

Max. Operating Pressure (PMO) 125 psig (9 barg)  
Minimum motive pressure required: 5 psig (0.34 barg)

Specific Gravity of pumped liquid - 0.9 to 1.0  
Specific Gravity of pumped liquid options - 0.89 to 0.8 & 0.79 to 0.65  
Filling head recommended above pump is 6" (152 mm) See TIS 5.202

### Pressure Shell Design Condition

PMA	Iron	125 psig /0-450°F	9 barg/0-232°C
Max. allowable pressure	Steel	285 psig /0-650°F	19 barg/343°C
	316 SS	220 psig /0-400°F	15 barg/204°C

TMA	Iron	450°F/0-125 psig	232°/0-9 barg
Max. allowable temperature	Steel	750°F/240 psig	399°C/16 barg
	316 SS	850°F/180 psig	454°C/12 barg

**Note:** Consult factory for PMA and TMA when using gauge glass.

**For increased service life, operate pump with motive pressure 15-20 psig above pump back pressure.**

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

### Sample Specification

The pump shall be Spirax Sarco type PPEC low profile pressure powered pump operated by steam, compressed air or other pressurized gas to 125 psig, which does not require any electrical energy, and is safe for use in explosive atmospheres. Body construction of cast iron, cast steel, or cast 316 stainless steel, for pumping liquids of specific gravity of 0.65 and above. The pump shall contain a float operated snap-acting mechanism with no external seals or packing, stainless steel trim, and hardened stainless steel mechanism bearing components with single piece motive inlet valve. Pump to be provided complete with inlet and outlet check valves attached at the factory for ease of field installation. When required, shall be equipped with a sight glass to monitor operation.

### Installation

For generic hook-up sketch, see TI-5-202-US. Full details are given in IM-5-200-US, which accompanies the product.

## PPEC Pressure Powered Pump Selection and Sizing

### How to Select & Size

From the inlet pressure, back pressure and filling head conditions given below, select the pump size and check valve package which meets the capacity requirement of the application.

Specify pump body type. Select optional extras as required.

For GPM, multiply the capacities below by 0.002.

For kg/h, multiply the capacities below by 0.454.

For liquid specific gravities from 0.9 to 0.65, consult Spirax Sarco.

\* Back pressure is the lift height (H) in feet x 0.433 plus psig in return line, plus downstream piping friction pressure drop in psig, calculated based on the maximum instantaneous discharge rate of the respective pump selected. (See TIS Sheets)

**Note: To achieve rated capacity, pump must be installed with check valves supplied by Spirax Sarco. Use of a substitute check valve may effect the performance of the pump.**

Condensate load	3000 lb/h
Steam pressure available for operating pump	75 psig
Vertical lift from pump to the return piping	30 feet
Pressure in the return piping (piping friction negligible)	25 psig
Filling head on the pump available	6 inches

### Solution:

1. Calculate "H", the total lift or back pressure, against which the condensate must be pumped. = (30 x 0.433) + 25 = 38 psig
2. From capacity table, with 75 psig inlet pressure and 40 psig back pressure, choose a 1-1/2" pump with stainless steel check valves, which has a capacity of 3300 lb/h.

### Note from capacity multiplying factor charts:

- A. Pump capacity if filling head is 24 in:  $1.3 \times 3,300 = 4290$  lb/h  
 B. Pump capacity using compressed air:  $1.12 \times 3,300 = 3696$  lb/h  
 (% back pressure is  $38 \div 75 = 50\%$ )

**Capacity lb/h** When installed with recommended filling head above top of pump.

1.00	1.00	1.03	1.09	1.18	1.20	1.33	1.45	1.50	Capacity Multiplying Factors

## Capacity Multiplying Factors for other Filling Heads

Capacity Multiplying Factors		
Check valve and piping size, pump type		
Filling Head	Capacity Multiplying Factors	
Inches	mm	1" & 1-1/2" PPEC
0	0	0.7
6	152	1.0
12	305	1.1
18	457	1.2
24	610	1.3
36	914	1.5
48	1219	
60	1524	

\* When using a PPEC below 6" filling head, a swing check valve must always be fitted to the inlet.

### Recommended Installation

The pump is fitted with vented receiver or an inlet reservoir. Details of the application will determine whether a vented receiver or an inlet reservoir will be needed to accomplish this.

## Vented Receiver (Open System)

To drain condensate from a single or multiple source an "open" system, a vented receiver should be installed in a horizontal plane above and ahead of the pump. Sufficient receiver volume is needed above the filling head level to accept the condensate reaching the receiver during the pump discharge stroke. More important, the receiver must be sized to allow sufficient area for complete flash steam separation from the condensate. The chart below shows proper vented receiver sizing (per criteria set forth in the A.S.H.R.A.E. Handbook) based on the amount of flash steam present. If the receiver is sized as shown below, there will be sufficient volume for condensate storage and sufficient area for flash steam separation. The receiver can be a length of large diameter pipe or a tank.

### Pump Size - up to 3"x2"

Flash Steam	Diameter	Pipe Size	Length	Vent Line Diameter
up to -				
75 lb/h	4"		36"	1-1/2"
150 lb/h	6"		36"	2"
300 lb/h	8"		36"	3"
600 lb/h	10"		36"	4"
900 lb/h	12"		36"	6"
1200 lb/h	16"		36"	6"
2000 lb/h	20"		36"	8"

## Inlet Reservoir Piping (Closed System)

To drain condensate from a single piece of equipment in a "closed" system, a reservoir should be installed in a horizontal plane above and ahead of the pump. Sufficient reservoir volume is needed above the filling head level to accept the condensate reaching the reservoir during the pump discharge stroke. The chart below shows minimum reservoir sizing, based on condensate load, needed to prevent equipment flooding during the pump discharge stroke. The reservoir can be a length of large diameter pipe or a tank.

### Pump Size - up to 3"x2"

Liquid lb/h	Reservoir Pipe Size				
	3"	4"	6"	8"	10"
500 or Less	2'				
1000	2'				
1500	3'	2'

6000			3'	2'	
7000			3'	2'	
8000			4'	2'	
9000			4.5'	3'	2'
10,000			5'	3'	2'
11,000			5'	3'	2'

Condensate Recovery

Non-Electric Pumps

## APT10-4.5 Automatic Pump Trap

The Spirax Sarco Automatic Pump Trap is a non-electric combination pump and trap which transfers high temperature condensate from a low-point, low pressure or vacuum space to an area of higher pressure or elevation. This self contained unit uses steam as the pumping force to remove condensate from process equipment under all operating conditions. Recommended for use with motive steam only.

<b>Model</b>	<b>APT10-4.5</b>
<b>PMO</b>	65 psig
<b>Sizes</b>	3/4" x 3/4" Inlet/Outlet 1/2" Motive/Exhaust
<b>Connections</b>	NPT
<b>Construction</b>	Ductile Iron Body Stainless Steel Internals Stainless Steel Check Valves

### Optional Extra

The APT10-4.5 is available with the body and cover coated with electroless nickel plate (ENP). This option, when required, will be denoted as APT10-4.5 ENP.

### Limiting Operating Conditions

<b>Max. Operating Pressure (PMO)</b>	65 psig (4.5 barg)
<b>Max. Back Pressure</b>	58 psig (4 barg)
<b>Max. Operating Temperature (TMO)</b>	311°F (155°C)

TI-5-2301-US 3.14

# APT10-4.5 Automatic Pump Trap

Approximate Dimensions (nominal) in inches and millimeters											
Size	Connection	A	B	C	D	E	F	G	H	I	Weight
3/4" x 3/4"	NPT	7.4	0.9	8.7	10.5	10.7	7.6	2.2	8.9	6.7	31
		187	23	223	266	273	194	57	225	171	14

## Nominal capacities

For full capacity details for a specific application consult Spirax Sarco.

To accurately size the pump trap, the following data is required.

1. Installation head available, from the base of the pump trap to the center line of the heat exchanger/process condensate outlet (ft). If the outlet is mounted vertically, then this should be from the base of the pump to the face of the outlet.
2. Motive steam pressure available to power the pump trap (psig).
3. Total back pressure in the condensate return system (psig). See note below.
4. Heat exchanger/ plant full load operating pressure (psig).
5. Heat exchanger/ plant maximum steam load (lb/hr).
6. Minimum temperature of process fluid. (°F).
7. Maximum controlled temperature of process fluid (°F).

## Spare Parts

See TIS 5.231

## Installation & Maintenance

Complete installation and maintenance instructions are given in IM-P612-18, supplied with each unit.

## Sample Specification

The pump trap shall be a Spirax Sarco automatic pump trap type APT10-4.5 operated by steam to 65 psig. No electrical energy shall be required.

Body construction from SG iron ASTM A395 dual certified with DIN 1693 GGG 40.3 with a swing type inlet check valve and ball type outlet check valve.

The internal trap mechanism shall contain a stainless steel float connected to an internal trap. The pump trap and check valve mechanisms shall be incorporated into the same body envelope with no external seals or glands and shall be capable of operating with a minimum 7.8 inches installation head from the base of the unit.

## Certification

All pump traps are EN 10204 (3.1.B) certifiable.

## Design Compliance

Shell designed in accordance with ASME VIII / A.D.Merkblatter

**How to order 1 - Automatic pump trap, type APT10-4.5, 3/4" x 3/4", NPT with NPT motive fluid connections.**

SIZE	3/4" x 3/4"
Pump discharge/cycle	0.55 gallons
3.3 ft. installation head	Max. trapping capacity 2022 lb/hr
At: 65 psig motive pressure 21 psig total back pressure	Max. pumping capacity 1420 lb/hr

### NOTE:

Total lift or back pressure BP (static head plus pressure head in the return system) must be below the motive fluid inlet pressure to allow pump capacity to be achieved.

$$BP \text{ (back pressure)} = (H \div 2.3) + (P) + (Pf)$$

Height (H) in feet  $\div 2.3$  plus pressure (P) psig in the return line, plus downstream piping friction pressure drop (Pf) in psig.

## Spare Parts for the APT10-4.5 Automatic Pump Trap

### Spare parts

The spare parts available are shown in heavy outline. Parts drawn in broken line are not supplied as spares.

<b>A</b> Cover gasket	See overleaf
<b>B</b> Inlet check valve	See overleaf
<b>C</b> Spring and actuator arm	See overleaf
<b>D</b> Floats	See overleaf
<b>E</b> Trap and outlet check valve mechanism	See overleaf
<b>F</b> Inlet/exhaust valve and seats	See overleaf

### Please note:

For customer convenience, spares are supplied in kits to ensure all the appropriate replacement parts are available e.g. when an inlet/exhaust valve and seat assembly is ordered, all replacement split pins, washers and gaskets will be provided in addition to the key components listed.

### How to order spares

Always order spares by using the description given.

**Example:** 1 - Inlet/exhaust valve and seat kit for a Spirax Sarco 3/4" x 3/4".

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.*

*In the interests of development and improvement of the product, we reserve the right to change the specification.*

## APT14, APT14HC and APT14SHC Automatic Pump Traps

### Description

The Spirax Sarco automatic pump trap is a flanged or screwed displacement receiver pressure rated to PN16. The unit is capable of automatically trapping or pumping, depending on pipeline conditions. The unit is operated by steam and is used to remove condensate from process plant under all operating conditions including vacuum. Recommended for use with motive steam only.

### Design compliance

The shell of the product has been designed in accordance with A.D. Merkblatter/ASME VIII.

### Standards

These products fully comply with the requirements of the European Pressure Equipment Directive 97/23/EC, ATEX Directive 94/9/EC and carry the **CE** and **Ex** marks when so required.

### Certification

These products are available with certification to EN 10204 3.1. **Note:** All certification/inspection requirements must be stated at the time of order placement.

### Sizes and pipe connections

Model and body material	Inlet and outlet sizes and pipe connections		Motive/exhaust		
APT14 SG iron	Flanged	1-1/2" inlet x 1" outlet	ANSI 150 B 16.5	NPT	1/2" (DN15)
			EN 1092 PN16	NPT or BSP	1/2" (DN15)
APT14HC SG iron	Flanged	1-1/2" inlet x 1" outlet	NPT	NPT	1/2" (DN15)
			BSP (BS 21 parallel)	BSP	1/2" (DN15)
APT14SHC Carbon Steel	Flanged	2" inlet x 1-1/2" outlet	ANSI 150 B 16.5	NPT	1/2" (DN15)
			EN 1092 PN16	BSP	1/2" (DN15)
			ANSI 150 B 16.5	NPT	1/2" (DN15)
			EN 1092 PN16	BSP	1/2" (DN15)

### Optional extra

Both the APT14 and APT14HC are available with the body and cover coated with electroless nickel plate (ENP). This option, when required, will be denoted as APT14 ENP and APT14HC ENP respectively and must be stated at the time of order placement. Gauge glasses, supplied separately, are available. For further details contact Spirax Sarco.

### Dimensions/weight (approximate) in inches and pounds (mm and kg)

## Pressure / temperature limits

-  The product must not be used in this region.
-  The product should not be used in this region or beyond its operating range as damage to the internals may occur.
- A - D Flanged PN16.
- B - D Flanged JIS/KS 10.
- C - D Flanged ANSI 150.

### APT14 and APT14HC (SG iron)

### APT14SHC (carbon steel)

Body design conditions	PN16	
Maximum motive inlet pressure	200 psig (13.8 bar g)	
PMA Maximum allowable pressure	232 psig @ 248°F (16 bar g @ 120°C)	
TMA Maximum allowable temperature	572°F @ 185 psig (300°C @ 12.8 bar g)	
Minimum allowable temperature	14°F (-10°C)	
<b>Note:</b> For lower temperatures consult Spirax Sarco.		
PMO Maximum operating pressure for saturated steam service	200 psig @ 388°F (13.8 bar g @ 198°C)	
Maximum backpressure for standard pumps (for higher backpressures contact Spirax Sarco)	72 psig (5 bar g)	
TMO Maximum operating temperature for saturated steam service	388°F @ 200 psig (198°C @ 13.8 bar g)	
Minimum operating temperature <b>Note:</b> For lower temperatures consult Spirax Sarco.	14°F (-10°C)	
Temperature limits (Ambient $\text{\textcircled{E}}$ )	14°F to 392°F (-10°C to 200°C)	
Designed for a maximum cold hydraulic test pressure of:	348 psig (24 bar g)	
	Recommended filling head above the pump (from the base of the receiver/process)	12 in (0.3 m)
Filling head	Maximum recommended filling head (from the base of the pump) for higher filling heads refer to Spirax Sarco	39 in (1 m)
	Minimum filling head required (from the base of the pump)	8 in (0.2 m)

## Nominal capacities

For full capacity details for a specific application consult Spirax Sarco. To accurately size the pump trap, the following data is required.

- Installation head available, from the base of the pump trap to the centre line of the heat exchanger / process condensate outlet (m).  
If the outlet is mounted vertically, then this should be from the base of the pump to the face of the outlet.
- Motive steam pressure available to power the pump trap (psig).
- Total backpressure in the condensate return system (psig). See note below.
- Heat exchanger full-load operating pressure (psig).
- Heat exchanger maximum steam load (lb/hr).
- Minimum temperature of secondary fluid. (°F).
- Maximum controlled temperature of secondary fluid (°F).

Model	APT14	APT14HC and APT14SHC
Pump discharge/cycle	1.3 gallons (5 litres)	2.1 gallons (8 litres)
39 inches installation head At: 73 psig motive pressure 15 psig total backpressure	Maximum trapping capacity 8800 lb/hr (4000 kg/h) Maximum pumping capacity 2420 lb/hr (1100 kg/h)	Maximum trapping capacity 19800 lb/hr (9000 kg/h) Maximum pumping capacity 6160 lb/hr (2800 kg/h)

**Note:** The capacities detailed within the above Table are only given as a guide. They are based on the installation parameters shown in the left hand column.

**Achieved capacities will differ if any of the installation parameters change.** For specific capacities and application details, contact Spirax Sarco.

The total lift or backpressure BP (static head plus pressure head in the return system) must be below the motive fluid inlet pressure to allow pump capacity to be achieved.

$$BP \text{ (backpressure)} = (H \times 2.31) + (P) + (Pf)$$

Height (H) in feet x 2.31 plus pressure (P) psig in the return line, plus downstream piping friction pressure drop (Pf) in psig.

(Pf can be ignored if the downstream pipework is less than 328 feet to a non-flooded condensate return and has been sized to take into account the effect of flash steam at the heat exchanger's full-load operating conditions.)

29	DCV10 (APT14HC and APT14SHC)	Stainless steel (not shown)	

# APT14 and APT14HC Automatic Pump Trap

## Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P612-04) supplied with the product.

### How to specify

#### APT14 and APT14HC

The pump trap shall be a Spirax Sarco automatic pump trap type APT14 operated by steam to 200 psig. No electrical energy shall be required. Body construction from SG iron (EN JS 1025 dual certified with ASTM A395) with a swing type inlet check valve (APT14 and APT14HC) and ball type outlet check valve (APT14 only). The internal trap mechanism shall contain dual stainless steel floats connected with a two stage trap, while the internal pump mechanism shall be a stainless steel single tension spring snap-action device with no external seals or glands.

#### APT14SHC

The pump trap shall be a Spirax Sarco automatic pump trap type APT14SHC operated by steam to 200 psig. No electrical energy shall be required. Body construction from carbon steel (EN 1.0619 dual certified with ASTM A216 WCB) with a swing type inlet check valve. The internal trap mechanism shall contain dual stainless steel floats connected with a two stage trap, while the internal pump mechanism shall be a stainless steel single tension spring snap-action device with no external seals or glands.

### How to order

**Example:** 1 Spirax Sarco automatic pump trap, type APT14, 1½" x 1", ANSI 150 with NPT motive fluid connections.

#### Optional extras

Both the APT14 and APT14HC are available with the **body and cover coated with electroless nickel plate (ENP)**. This option, when required, will be denoted as **APT14 ENP and APT14HC ENP** respectively and must be stated at the time of order placement.

The APT14, APT14HC and APT14SHC are available with the body drilled, tapped and plugged to accept gauge glasses. **Note:** Gauge glasses can not be fitted retrospectively to the standard APT14, APT14HC or APT14SHC.

**Gauge glasses**, supplied separately, are available for the APT14, APT14HC or APT14SHC. For further details contact Spirax Sarco.

### Spare parts

The spare parts available are shown in solid outline. Parts drawn in broken line are not supplied as spares.

#### Available spares

<b>A</b> Cover assembly (A - G inclusive)	1, 2, 5-25
<b>B</b> Cover gasket	2
<b>C</b> Inlet check valve	2, 12
<b>D</b> Spring and actuator arm	2, 14, 24
<b>E</b> Floats	2, 5, 6, 7
<b>F</b> Trap and outlet check valve mechanism	2, 8, 9, 10 (APT14 only), 21, 22, 23
<b>G</b> Inlet/exhaust valve and seat kit	2, 16, 17, 18, 19, 27
<b>H</b> See separate literature: For the <b>APT14</b> or <b>APT14HC</b> see TI-P163-01 and for the <b>APT14SHC</b> see TI-P063-02	28
<b>DCV10 outlet check valve</b> (APT14HC and APT14SHC only). See separate literature TI-P601-32	29

**Please note:** For customer convenience, spares are supplied in kits to ensure all the appropriate replacement parts are available e.g. when an inlet/exhaust valve and seat assembly is ordered, all replacement split pins, washers and gaskets will be provided in addition to the key components listed.

#### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the size and type of unit.

**Example:** 1 - Inlet/exhaust valve and seat kit for a Spirax Sarco 1½" x 1" APT14 automatic pump trap.

# APT14 and APT14HC Automatic Pump Trap

**B Cover gasket**

**C Inlet check valve**

**D Spring and actuator arm**

**E Floats**

**F Trap and outlet check valve mechanism**

Note: Item 10 is not included for the APT14HC and APT14SHC

**APT14**

**APT14HC and APT14SHC**

**G Inlet / exhaust valve and seat kit**

**APT14**

**APT14HC and APT14SHC**

## APT Selection and Sizing

Spirax Sarco will ensure that the APT is accurately matched to your process and will provide you with a detailed sizing chart, tailored to your specific application.

Providing the information below is known, we can even provide you with confirmation over the telephone and fax you your specific chart.

Alternatively arrange a visit for your local Spirax Sarco representative who can provide detailed APT sizing information for all your specific needs.

To help us size the APT for your application simply provide us with the following information: -

### Recommended Installation

- |   |  |       |
|---|--|-------|
| A | Installation head available from the base of the pump to the centreline of the heat exchanger / process condensate outlet. | ft    |
| B | Motive steam pressure available to power the pump trap.  | psig  |
| C | Pressure in the condensate return system.  | psig  |
| D | Height of condensate return from floor level.  | ft    |
| E | Heat exchanger full load operating pressure.   | psig  |
| F | Maximum steam load on the heat exchanger.  | lb/hr |
| G | Minimum secondary fluid temperature.   | °F    |
| H | Maximum controlled temperature of secondary fluid.   | °F    |

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-5-2041-US 11.13

# APT Selection & Sizing

## How to Select & Size

From the inlet pressure, back pressure and filling head conditions given below, select the APT size which meets the capacity requirement of the application.

For GPM, multiply the capacities below by 0.002.

For kg/h, multiply the capacities below by 0.454.

\* Back pressure is the lift height (D) in feet x 0.433 plus psig in return line, (C), plus piping friction in psig.

### Examples:

Steam Condensate load	(F)	750 lb/h
Steam pressure available for operating APT	(B)	100 psig
Vertical lift from APT to the return piping	(D)	50 feet
Pressure in the return piping (piping friction negligible)	(C)	50 psig
Filling head available from base of APT	(A)	8 inches
System pressure	(E)	150 psig

### Solution:

- Calculate "C + D", the total lift or back pressure, against which the condensate must be pumped. = (50 x 0.433) + 50 = 72 psig
- From capacity table, with 100 psig inlet pressure and 72 psig back pressure, choose a APT14 which has a capacity of 1,695 lb/h.

### Note:

The capacity charts shown below are applicable for the specific conditions only. Any variance in system conditions A, B, C, D, or E will alter the capacities shown, and hence these figures can be used as a rough guide only. Your local Spirax Sarco representative will provide detailed APT sizing information for all conditions.

## Vented Pressure Powered Pump Packages PPEC / PTC / PTF

The modular pumping system consists of the standard PPEC / PTC / PTF Pressure Powered Pumps, pre-piped with the necessary auxiliary components and integral receiver mounted on a skid base. The unit offers versatility of providing a base mounted module and pump with added modular options for a comprehensive fully engineered modular package ensuring a technically correct and complete hook up.

### Standard Pump Packages

### Standard Pump Package Options

- Pump motive inlet (fully trapped) and exhaust piping.
- Overflow pipe.
- Pump drain
- Receiver only
- ASME coded receiver (150 psig @ 450°F)
- Pump and receiver gauge glass
- Inline strainer
- Pressure gauges
- Receiver with modified connections.
- Pump isolation valve on outlet.

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.

## Triplex Pressure Powered Pump Packages PTC/PTF

### Description

The Modular pumping system consists of Pressure Powered Pumps pre-engineered with the necessary auxiliary components into a skid-mounted module.

The unit includes a receiver vessel designed to provide adequate separation of flash steam and condensate.

The module requires only service field connections for complete installation and fast startup.

### Typical applications

Condensate recovery modules are used where multiple sources of condensate are to be pumped and flash steam is to be vented (open system).

For Closed systems: Consult ESD

### Capacity Chart

For sizing data, see Selection & Capacity Chart.

### Standard Features

- Spirax Sarco non-electric Pressure Powered Pump with high capacity stainless steel check valves
- TPC3=Cast Ductile Iron Pump Body
- TPF3=Fabricated Steel Pump Body
- Hydrotested, blasted, and painted with SSI industrial black enamel
- Fabricated by ASME Section IX certified welders.
- ASME Section VIII Code Stamped receiver vessel (TPF3 Model Only).
- Completely assembled modular pumping system on structural steel base with all connections protected for shipping.

**Additional Options are available**

### Suggested Specification

- Furnish and install where shown on plans; Spirax Sarco Inc. Model #TP\_ 3-0-CS-HO- \_ \_ \_ pressure powered pumping system.
- The system shall be a complete pre-piped factory package requiring only service connections for a fully functional system.
- Electricity shall not be required for system operation
- The Steel receiver shall be ASME Constructed and stamped for 150 PSIG WP (Applicable to TPF3 Model Only)
- The Pumps shall be constructed of Fabricated Steel (TPF3) or Ductile Iron (TPC3) with an allowable working pressure of not less than 200 PSIG.
- All condensate piping shall be schedule 80 Seamless C/S pipe welded
- The package shall be sized to meet (or exceed) the actual required condensate system load.
- The package shall include a structural steel skid and painted with 1 coat Industrial black enamel.

*Local regulations may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

### Typical Construction

Model	TRIPLEX
PMO - PUMPS	200 psig
Design Pressure (PMA)	200 psig @ 400°F
Capacity Range	52,920 lbs./hr @ 200 psig motive pressure and 10 psig back pressure
Receiver Vessel	135 Gallon-ASME Constructed and Stamped 150 psig @ 550°F on TPF3 Models 135 Gallon Non-Code on TPC3 Models
Flash Steam Discharge Rates	5292 lbs./hr (10% at maximum capacity)
Hydrotest Pressure	225 psig
Construction Materials	Receiver vessel - Fabricated Steel Pressure Powered Pump - See SSI Tech Sheets Check Valves - Stainless Steel (ANSI 150) Isolation valves - Carbon Steel Piping - A106 Seamless Carbon Steel
Dimensions & Weight	See SSI Sales Drawings
See TI-5-030-US For Pump Capacities	

## Pressure Powered Pump™ Accessories

### Insulation Covers

The Spirax Sarco Insulation Cover is a removable, reusable cover custom designed for use with all Spirax Sarco Pressure-Powered Pumps. These covers not only offer increased energy savings through quality insulation, but also give personnel protection from exposure to hot metal surfaces. The Spirax Sarco Insulation Cover is made of the highest quality materials available – 1" thick fiberglass material is quilted between two layers of 16 oz. teflon-impregnated fiberglass cloth. The water, oil and chemical resistant

construction provides long-lasting insulating quality and equipment protection indoors, outdoors, and in most corrosive conditions. Less expensive to install than conventional hard insulation, the covers are abuse-resistant and will not wick moisture or hydrocarbons. Removable and reinstalled in minutes, the one-piece construction maximizes energy savings and provides rapid payback.

#### Limiting Operating Conditions

##### Max. Operating Temperature

500°F (260°C) continuous

##### Standard Range

- PPEC Insulation Cover
- PTC Insulation Cover (up to 3"x2" size)
- PTF Insulation Cover (up to 3"x2" size)
- 4" PPF-P Insulation Cover (has 2 pc. construction)
- APT10 Insulation Cover
- APT14 Insulation Cover

#### Construction Materials

No.	Part	Material
1	Cover Cloth	Teflon Coated Fiberglass
2	Insulation Mat	Fiberglass
3	Anchor Pin	Type 304 Stainless Steel
4	Wire Fastener	Type 304 Stainless Steel

#### Installation

Check the nameplate on the insulation cover and pump to be sure you have the correct cover for your pump, i.e., PTC Cover will fit only model PTC Pump. Slip the cover around the pump, making sure the steam inlet and outlet connections are exposed through their respective cut-outs. Cut-outs are also provided for the optional gauge glass assembly on the pump. Take the stainless steel wires attached to one side of the mating edge and pull them snugly around the lacing pins on the adjacent mating edge of the cover, much like lacing a work boot.

#### Sample Specification

The reusable cover shall be a Spirax Sarco Insulation Cover, custom-fitted for the specific Spirax Sarco Pressure Powered Pump or Automatic Pump Trap required. The cover shall contain no asbestos or silicone materials. The cover cloth shall be teflon-impregnated, with double sewn and binded seams, suitable for continuous temperatures of 500°F, and the insulation shall be minimum 1" thick Burlglass 1200 needled mat with 100% Type E glass fibers. The insulation cover shall not spread flame or smoke and render a V-O rating when tested under the NFPA 701 vertical flame test.

## Quadraplex Pressure Powered Pump Packages PTC/PTF

### Description

The Modular pumping system consists of Pressure Powered Pumps pre-engineered with the necessary auxiliary components into a skid-mounted module.

The unit includes a receiver vessel designed to provide adequate separation of flash steam and condensate.

The module requires only service field connections for complete installation and fast startup.

### Typical applications

Condensate recovery modules are used where multiple sources of condensate are to be pumped and flash steam is to be vented (open system).

For Closed systems: Consult ESD

### Standard Features

- Spirax Sarco non-electric Pressure Powered Pump with high capacity stainless steel check valves
- QPC3= Cast Ductile Iron Pump Body
- QPF3= Fabricated Steel Pump Body
- Hydrotested, blasted, and painted with SSI industrial black enamel
- Fabricated in accordance with ASME Section IX certified welders.
- ASME Section VIII Code Stamped receiver vessel (QPF3 Model Only).
- Completely assembled modular pumping system on structural steel base with all connections protected for shipping.

### Additional Options are available

### Suggested Specification

- Furnish and install where shown on plans; Spirax Sarco Inc. Model # **QP\_3-0-CS-HO-\_-\_-** pressure powered pumping system.
- The system shall be a complete pre-piped factory package requiring only service connections for a fully functional system.
- Electricity shall not be required for system operation
- The Steel receiver shall be ASME Constructed and stamped for 150 PSIG WP. (Applicable to QPF3 Models ONLY)
- The Pumps shall be constructed of Fabricated Steel (QPF3) or Ductile Iron (QPC3) with an allowable working pressure of not less than 200 PSIG.
- All condensate piping shall be schedule 80 Seamless C/S pipe welded
- The package shall be sized to meet (or exceed) the actual required condensate system load.
- The package shall include a structural steel skid and painted with 1 coat Industrial black enamel.

### Typical Construction

Model	QUADRAPLEX
PMO - PUMPS	200 psig
Design Pressure (PMA)	200 psig @ 400°F
Capacity Range	70,560 lbs./hr @ 200 psig motive pressure and 10 psig back pressure
Receiver Vessel	185 Gallon-ASME Constructed and Stamped 150 psig @ 550°F on QPF3 Models 185 Gallon Non-Code on QPC3 Models
Flash Steam Discharge Rates	7056 lbs./hr (10% at maximum capacity)
Hydrotest Pressure	225 psig

## APT Pump Packages APT10 Series

### Description

The compact low profile modular pump/trap system consists of the versatile APT 10-4.5 Automatic Pumping Trap pre-piped and mounted on a steel base.

The SPT1 module includes a condensate reservoir sized to accommodate (1) pump cycle.

The module requires only service field connections for complete installation and fast startup.

### Typical applications

APT 10-4.5 pump/trap modules are used where low profile and high capacity condensate removal is required.

The APT 10-4.5 Pump Trap has the features of a conventional F&T trap combined with a pressured pump all in one unit.

- Air handlers
- Heat exchangers
- Absorption Chillers
- Evaporators
- Dryers

### Standard Features

- Spirax Sarco non-electric APT 10-4.5 Automatic Pump Trap
- Motive steam drip station with Spirax Sarco UTD 52L trap and isolation valves and air vent.
- Hydrotested, blasted, and coated with SSI industrial enamel
- Fabricated by ASME Section IX certified welders.
- Completely assembled modular pumping system on platform steel base with all connections protected for shipping.

### Additional Options are available

### Suggested Specification

- Furnish and install where shown on plans, Spirax Sarco Inc. **Model SPT1-**\_\_\_\_\_ Pressure powered pump/trap system.
- The system shall be a complete pre-piped factory package requiring only service connections for a fully functional system.
- Electricity shall not be required for system operation
- The receiver shall be constructed for 145 PSIG WP.
- The Pump/Trap shall be constructed of Ductile Iron with an allowable operating pressure of 65 PSIG.
- The Pump/Trap shall be a unified system with stainless steel mechanism and no external glands or seals. Individual pump and trap systems will not be acceptable
- The package shall be sized to meet (or exceed) the actual required condensate system load.
- The package shall include a structural steel platform skid and painted with (1) coat enamel.

### Typical Construction

Model	SPT1
PMO – Motive Pressure	65 psig
Design Pressure (PMA)	145 psig @ 392°F
Capacity Range	Trap Mode- 263 to 1558 lbs/hr Pump Mode-156 to 958 lbs/hr
Receiver Vessel	Constructed for 145 psig @ 550°F
Hydrotest Pressure	188 psig
Construction Materials	Receiver vessel - Fabricated Steel APT 10-4.5 - See SSI Tech Sheets TI-5-2301-US Valves - Carbon Steel Ball Valves Piping - A106 Seamless Carbon Steel
Dimensions & Weight	See SSI Sales Drawings

### Capacity

For sizing data, see APT10-4-5 Selection & Capacity Chart TI-5-204-1-US.

*Local regulations may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

## APT Pump Packages APT14 Series

### Description

The compact low profile modular pump/trap system consists of the versatile APT 14 Automatic Pumping Trap pre-piped and mounted on a steel base.

The simplex or duplex modules include a condensate reservoir sized to accommodate the pump cycles.

The module requires only service field connections for complete installation and fast startup.

### Typical applications

APT 14 pump/trap modules are used where low profile and high capacity condensate removal is required.

The APT 14 Pump Trap has the features of a conventional F&T trap combined with a pressured pump all in one unit.

- Air handlers
- Heat exchangers
- Absorption Chillers
- Evaporators
- Dryers

### Standard Features

- Spirax Sarco non-electric APT 14 Automatic Pump Trap
- Simplex or Duplex units
- Motive steam drip station with Spirax Sarco UTD 52L trap and isolation valves and air vent.
- Hydrotested, blasted, and coated with SSI industrial enamel
- Fabricated by ASME Section IX certified welders.
- Completely assembled modular pumping system on platform steel base with all connections protected for shipping.

### Additional Options are available

### Suggested Specification

- Furnish and install where shown on plans, Spirax Sarco Inc. Model SPT4/DPT4-\_\_\_\_\_ Pressure powered pump/trap system.
- The system shall be a complete pre-piped factory package requiring only service connections for a fully functional system.
- Electricity shall not be required for system operation
- The receiver shall be constructed for 200 PSIG WP.
- The Pump/Trap shall be constructed of Ductile Iron with an allowable working pressure of no less than 200PSIG.
- The Pump/Trap shall be a unified system with stainless steel mechanism and no external glands or seals. Individual pump and trap systems will not be acceptable
- The package shall be sized to meet (or exceed) the actual required condensate system load.
- The package shall include a structural steel platform skid and painted with 1 coat enamel.

*Local regulations may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

### Typical Construction

Model	SPT4/DPT4
PMO	200 psig
Design Pressure (PMA)	232 psig @ 388°F
Capacity Range	Trap Mode- 850 to 10,021 lbs/hr Pump Mode-423 to 3075 lbs/hr
Receiver Vessel	Constructed for 200 psig @ 550°F
Hydrotest Pressure	230 psig
Construction Materials	Receiver vessel - Fabricated Steel APT 14 - See SSI Tech Sheets TI-5-228-US Valves - Carbon Steel Ball Valves Piping - A106 Seamless Carbon Steel
Dimensions & Weight	See SSI Sales Drawings

### Capacity

## APT Pump Packages APT14HC

### Description

The compact low profile modular pump/trap system consists of the versatile APT14HC Automatic Pumping Trap pre-piped and mounted on a steel base.

The simplex or duplex modules include a condensate reservoir sized to accommodate the pump cycles.

The module requires only service field connections for complete installation and fast startup.

### Typical applications

APT14HC pump/trap modules are used where low profile and high capacity condensate removal is required.

The APT14HC Pump Trap has the features of a conventional F&T trap combined with a pressured pump all in one unit.

- Air handlers
- Heat exchangers
- Absorption Chillers
- Evaporators
- Dryers

### Standard Features

- Spirax Sarco non-electric APT14HC Automatic Pump Trap
- Simplex or Duplex units
- Motive steam drip station with Spirax Sarco UTD 52L trap and isolation valves and air vent.
- Hydrotested, blasted, and coated with SSI industrial enamel
- Fabricated by ASME Section IX certified welders.
- Completely assembled modular pumping system on platform steel base with all connections protected for shipping.

### Additional Options are available

### Suggested Specification

- Furnish and install where shown on plans, Spirax Sarco Inc. Model SPT4HC/DPT4HC-\_\_\_\_\_ Pressure powered pump/trap system.
- The system shall be a complete pre-piped factory package requiring only service connections for a fully functional system.
- Electricity shall not be required for system operation
- The receiver shall be constructed for 200 PSIG WP.
- The Pump/Trap shall be constructed of Ductile Iron with an allowable working pressure of no less than 200PSIG.
- The Pump/Trap shall be a unified system with stainless steel mechanism and no external glands or seals. Individual pump and trap systems will not be acceptable
- The package shall be sized to meet (or exceed) the actual required condensate system load.
- The package shall include a structural steel platform skid and painted with 1 coat enamel.

*Local regulations may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

## Flash Recovery Vessels

Flash steam, which is formed when a portion of the high pressure condensate discharged from a steam trap re-evaporates, is separated from the condensate and piped away from the top of the vessel. The remaining condensate drains from the bottom of the vessel to a steam trap. The flash is usually added to the low-pressure steam system.

Model	Flash Recovery Vessels
PMO	150 psig
Sizes	6", 8", 12", 16"
Connections	ANSI 150 RF & NPT
Construction	Mild Steel

### LIMITING OPERATING CONDITIONS

TI-5-401-US 03.94

# Flash Recovery Vessels

## SAMPLE SPECIFICATION

Flash Recovery Vessel shall be mild steel construction ASME Code Stamped for 150 psig steam service with ANSI 150 RF flanges. Connections for a pressure gauge and a Safety Relief Valve shall be provided in the shell.

## INSTALLATION

The vessel should be installed with the flash steam outlet at the top as shown. Each size vessel incorporates a 1/2" NPT connection for the fitting of a pressure gauge. If a Safety Relief Valve is required, it should be fitted in the NPT connection provided in the side of the shell. For drainage, a properly sized float type steam trap must be connected to the condensate outlet at the bottom of the vessel.

## STANDARDS

These vessels are designed in accordance with ASME Code, Section VIII, Div. 1, and are ASME Code Stamped for 150 psig steam service.

## HOW TO SIZE

Fig. 1 shows the proportion by weight of flash steam formed from condensate with various pressure drops. From Fig. 1, find the weight of flash per unit weight of condensate. Multiply this by the maximum condensing rate to get the maximum weight of flash steam expected from the flash vessel. Select the appropriate size flash vessel from Fig. 2 by finding the area within which both the condensate rate and the flash steam weight fit.

**FIG. 1 PROPORTION OF FLASH STEAM**

**FIG. 2 RECOVERY VESSEL CAPACITIES**

### Example:

A plant operating at 80 psig condenses 6000 lb/h of steam. Flash steam from this is to be recovered at 5 psig. Fig. 1 shows that the condensate at 80 psig produces approximately .105 lb of flash steam per lb of condensate when the pressure is dropped to 5 psig. From 6000 lb/h of condensate, 630 lb/h of flash steam will be produced. From Fig. 2 it will be seen that 6000 lb/h of condensate meets the line of 630 lb/h of flash steam in the Size 12 area, so a Size 12 Flash Recovery Vessel is necessary for this duty.

## Condensate Return and Boiler Feed Pumps "G" Series

### DESCRIPTION

Spirax Sarco "G" Series condensate and boiler feed pumps are packaged units completely assembled, wired and tested at the factory. They are used in low pressure steam heating systems to collect and quickly return condensate to the boiler or boiler feed unit. Pumping action is controlled by an integral float switch on simplex (one pump) units or mechanical alternator on duplex (two pump) units. Unlike boiler feed units which are controlled by a boiler mounted control and equipped with a makeup valve mechanism, condensate pumps usually do not directly supply boiler makeup water.

### AVAILABLE TYPES

#### Simplex units

Simplex units are equipped with vapor tight, heavy duty float switch control with stainless steel float. Easily field adjustable to provide proper pump control and operation.

#### Duplex units

Duplex units offer some additional distinct advantages over simplex units. They are used where an unusually heavy amount of condensate must be returned or where it is desirable to have a stand-by pump available. Equipped with a float operated, automatic mechanical alternator, they provide several benefits.

- **System overload protection**—The second pump is activated if the rate of condensate return exceeds the limits of the first pump.
- **Extra long service life**—Each of the two pumps is activated automatically on alternating pumping cycles so the work load is evenly distributed between the two pumps.
- **Back-up system protection**—A second pump is automatically actuated if the first one fails to start. Maintenance or repairs can be made on either pump without shutting down the other one or interrupting system operation.

### LIMITING CONDITIONS

Capacity: to 18 gpm. Discharge pressures: 20, 30 and 40 psi.

### RECEIVER

Close grained cast iron.

Simplex unit 6, 15, 21 and 45 gallon sizes.

Duplex unit 15, 21 and 45 gallon sizes.

Welded, copper bearing steel.

Simplex unit 10, 20 and 45 gallon sizes.

Duplex unit 20 and 45 gallon sizes.

### HEAVY DUTY, DRIP PROOF MOTORS

Heavy duty, drip proof motors are designed for continuous operation. Ball bearings are prelubricated and shielded. Motors have stainless steel shaft -operated at 3450 rpm 60Hz. Both single phase 115/230 volt with built-in overload protection, and three phase 230/460 volt (or 208 volt) motors are available with O.D.P. or special TEFC enclosures.

All parts of the pump and motor which are subject to normal wear are easily accessible by removal of motor and canopy, attached with universal type 4 bolt flange mounting. Service of impeller and seal is also made easy . . . entire motor can be removed without disturbing plumbing or electrical connections.

Simplex Unit

Duplex Unit

### PUMP AND MOTOR ASSEMBLY

Pump and motor assembly is close coupled centrifugal design with enclosed type bronze impeller and wearing ring. The bronze impeller is designed to assure smooth, efficient water passage. No close clearances that are subject to rapid wear and reduced efficiency.

Mechanical shaft seal designed for temperatures to 250 °F. Seal is vented to receiver to insure adequate lubrication at all times.

### OPTIONAL EXTRAS

#### Suction Isolation Valve

When installed between the pump and receiver on simplex units, it allows the pump motor assembly to be removed without draining the receiver. On duplex units, it permits one pump to be removed while the other one continues to operate without interrupting system operation.

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

## Boiler Feed Pumps "GB" Series

### DESCRIPTION

Spirax Sarco GB Series boiler feed pumps are packaged units, completely assembled, wired and tested at the factory.

GB Series boiler feed units are used to pump condensate and makeup water directly into the boiler(s). Pumping action is determined by a boiler mounted control which senses boiler water level requirements. Each boiler feed unit is equipped with a heavy duty makeup valve actuated by the position of its seamless float within the receiver. The mechanism is readily adjustable for various water levels. It is mounted on the end of the receiver and can be easily removed as a complete unit.

### AVAILABLE TYPES

Simplex unit  
Duplex unit

### LIMITING CONDITIONS

Capacity to 18 gpm.  
Discharge pressures: 20,30 and 40 psi

### RECEIVER

Cylindrical welded steel, 49, 71, and 117 gallon sizes are standard. Water level gauge glass and float operated make-up valve are standard.

### PUMP AND MOTOR ASSEMBLY

Pump and motor assembly is close coupled centrifugal design with enclosed type bronze impeller and wearing ring. The bronze impeller is designed to assure smooth, efficient water passage. No close clearances that are subject to rapid wear and reduced efficiency.

Mechanical shaft seal designed for temperatures to 250°F. Seal is vented to receiver to insure adequate lubrication at all times.

### HEAVY DUTY, OPEN DRIP PROOF MOTORS

Heavy duty open drip proof motors are designed for continuous operation. Ball bearings are prelubricated and shielded. Motors have stainless steel shaft - operate at 3450 rpm 60 Hz. Both single phase 115/230 volt with built-in overload protection, and three phase 230/460 volt (or 208 volt) motors are available with O.D.P. standard, or special TEFC enclosures.

All parts of the pump and motor which are subject to normal wear are easily accessible by removal of motor and canopy, attached with universal 4 bolt flange mounting. Service of impeller and mechanical seal is also made easy . . . entire pump and motor can be removed without disturbing plumbing or electrical connections.

Duplex Unit

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.

## Condensate Return and Boiler Feed Pumps "V" Series

### Description

Condensate pumps are used in low pressure heating systems to collect and quickly return condensate to the boiler feed unit. Their pumping action is controlled by the water level in the receiver. Simplex units consist of an electric motor close-coupled to a centrifugal pump mounted on a cast iron or welded steel storage receiver with a float operated pump control. Multiple pump units are used when greater pumping capacity or back-up pump protection is required.

Boiler feed pumps are used to pump and precisely control the condensate and makeup water required by the boiler(s) in low pressure steam applications. Pumping action is controlled by the fluid level in the boiler. They consist of a cast iron or welded steel storage receiver equipped with a makeup valve and one or more close-coupled centrifugal pumps.

Spirax Sarco V series pumping systems are available in simplex, duplex, triplex or quadruplex configurations from 1,000 to 100,000 sq. ft. EDR capacities. Discharge pressures from 10-40 psi are available on units equipped with 1750 rpm motors; 20-75 psi on 3500 rpm units. True 2 ft. net positive suction head pumps are available.

### Receivers

Cast iron, rectangular receivers are available with 15 to 110 gallon capacities.

Heavy duty, welded, rust resistant, copper bearing steel receivers are available in rectangular or cylindrical configurations with capacities ranging from 21 to 1,000 gallons.

### Spirax Sarco Centrifugal Pumps

Four centrifugal models are available in a large selection of sizes to meet your specific application requirements: VC, VJ, VE, VA and VN.

The pumps are bolted directly to the receiver to provide a compact efficient design. Their close-coupled, centrifugal design with bronze enclosed type impeller assures smooth, efficient water passage. A mechanical seal, rated to a maximum temperature of 250°F, is vented to the receiver to assure adequate lubrication at all times.

An advanced impeller and volute design make many of the pumps excellent for applications requiring a true 2 ft Net Positive Suction Head (NPSH). These units are identified with shaded areas in the selection tables on TIS 5.306 & 5.307. The simple, reliable single stage construction eliminates the need for additional impellers and parts used in other low NPSH pumps.

Designed for long-life, low maintenance and reliable service, the pumps are easily serviceable if necessary. Parts subject to normal wear are readily accessible. Impeller and mechanical seal can be serviced without disturbing piping or electrical connections.

All pumps are close-coupled to heavy duty, ball bearing open drip proof electric motors. Fractional horsepower single phase motors have built-in thermal overload protection.

To help you determine the appropriate pump type for your application, specifications for each of the four types are described in the next paragraphs. Refer to selection tables for additional pumping system performance data.

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.*

# Condensate Return and Boiler Feed Pumps

## "V" Series

### VC Pumps

1/3 through 15 hp  
 1750 rpm—discharge pressures are 10, 15 or 20 psi  
 3500 rpm—discharge pressures are 30 to 75 psi  
 Motor types available: Open drip proof (ODP)  
 Totally enclosed fan cooled (TEFC)  
 Explosion proof  
 Single phase, 115/230 V, 60 Hz  
 Three phase, 208 or 230/460 V, 60 Hz

### VJ Pumps

1/2 through 2 hp  
 3500 rpm—discharge pressures are 15, 20, 30, 40 or 50 psi  
 Motor types available: Open drip proof (ODP)  
 Totally enclosed fan cooled (TEFC)  
 Single phase, 115/230 V, 60 Hz  
 Three phase, 200V, 60 Hz  
 Three phase, 230/460 V, 60 Hz

### VE Pumps

3/4 through 2 hp  
 1750 rpm—discharge pressures are 20, 25 or 30 psi  
 Motor types available: Open drip proof (ODP)  
 Totally enclosed fan cooled (TEFC)  
 Explosion proof  
 Single phase, 115/230 V, 60 Hz  
 Three phase, 200 V, 60 Hz  
 Three phase, 230/460 V, 60 Hz

### VA Pumps

3, 5 or 7 1/2 hp  
 1750 rpm—discharge pressures are 30 or 40 psi  
 Motor types available: Open drip proof (ODP)  
 Totally enclosed fan cooled (TEFC)  
 Explosion proof  
 Three phase, 200 V, 60 Hz  
 Three phase, 230/460 V, 60 Hz

### VN Pumps

1/2 thru 7 1/2 hp  
 3450 rpm—discharge pressures are 20 to 60 psi  
 Motor types available: Open drip proof (ODP)  
 Totally enclosed fan cooled (TEFC)  
 Explosion proof  
 Single phase, 115/230 V, 60 Hz  
 Three phase, 230/460 V, 60 Hz

### Accessories and Optional Equipment

#### Boiler Feed Pumps—Standard Equipment

- Float operated makeup valve
- Gauge glass and thermometer tappings

#### Boiler Feed Pumps—Optional Equipment

- Control Panels
- Thermometer
- Makeup feeders—external type, or reverse acting float switch and solenoid valve type
- Magnesium corrosion inhibitor
- Suction isolation valves—butterfly type
- Inlet strainers—"Y" or basket type
- Gauge glass
- Three valve bypass and inlet strainer assembly for solenoid make-up valve
- Feedwater preheaters
- Discharge pressure gauges
- Discharge check valves
- Discharge gate valves
- Corrosion resistant receiver linings

### Accessories and Optional Equipment

#### Condensate Pumps—Standard Equipment

- Simplex units have opening blanked-off for addition of a second pump at a later date
- One float switch (simplex units)
- Mechanical alternator (duplex units)—equalizes running time between the two pumps and provides emergency back-up in case of excessive condensate return or a pump failure
- Receiver tapping for gauge glass and thermometer

#### Condensate Pumps—optional equipment

- Control Panels (standard mounted to receiver, remote option available)
- Thermometer
- Two float switches (duplex units)
- Suction isolation valves—butterfly type
- Inlet strainers—"Y" or basket type
- Gauge glass
- Magnesium corrosion inhibitor
- Corrosion resistant receiver linings
- Discharge pressure gauges
- Discharge check valves
- Discharge gate valves

Designates 2 Ft. NPSH Capability \* For boiler feed units, receiver size should be approximately 1 gallon of storage per boiler h.p.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.

In the interests of development and improvement of the product, we reserve the right to change the specification.

## Control Panels 550 Series and 700 Series

### AVAILABLE TYPES

#### Series 550

Enclosure: Nema Type 1 ONLY

Controls: 2 starters with 3rd leg overload protection  
Reset button in cover

#### Series 700

Enclosure: Nema Type 1.

Controls: 2, 3 or 4 starters, each with 3rd leg overload protection and  
reset button on starters.  
Numbered terminal strip

### OPTIONAL EXTRAS

#### Series 550

Controls: 3 Position Selector Switch Hand-Off-Auto or Lead-Off Lag, or  
Test-Off-Auto  
Pilot Light(s) Red or Green  
230 V Max. Use 700 Series if voltage exceeds 230 V.

#### Series 700

Enclosure: Nema 1, 2, 3, 4X or 12. NEMA 7 or 9 Explosion Proof, consult factory.

Controls: 1 Disconnect per panel with Cover Interlock with provisions for padlock  
1-Fuse Block per starter or—  
1-Circuit Breaker per starter  
Fused Control Circuit Transformer, 110 Volt Secondary.  
1-Electric Alternator per panel (duplex models only)  
Relays— as required.

Selector Switches on cover, 1 per starter labeled:

- Hand-Off-Auto
- Lead-Off-Lag
- Boiler No. 1-Off-Boiler No. 2
- Pump No. 1-Off-Pump No. 2
- Test-Off-Auto (spring loaded to off)

Pilot Lights on cover - 1 per starter

(Green for standard pumps: red for stand by pumps.)

Alarm bell with silencing switch - 1 per panel

SERIES 550

SERIES 700

TI-5-325-US 04.95

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.*

# Control Panels

## 550 Series and 700 Series

### NEMA ENCLOSURES

Enclosures For Inside Non-Hazardous Locations

Provides Protection Against	Type of Enclosure			
	1	2*	4*	12*
Accidental contact with enclosed equipment yes	yes	yes	yes	
Falling dirt	yes	yes	yes	yes
Falling liquids and light splashing		yes	yes	yes
Dust lint fibers and flyings			yes	yes
Hosedown and splashing water			yes	
Oil and coolant seepage			yes	yes
Oil and coolant spraying and splashing				
Corrosive agents				
Occasional submersion				

*\*These enclosures may be ventilated. However Type 1 may not provide protection against small particles of falling dirt when ventilation is provided in the enclosure top; and Type 12, if ventilated, will not be dust-tight*

### TYPE 1 - GENERAL PURPOSE INDOOR

Nonventilated Enclosures

**Type 1** enclosures are intended for use indoors primarily to prevent accidental contact of personnel with the enclosed equipment in areas where unusual service conditions do not exist. In addition, they provide protection against falling dirt. Enclosures which are intended to be flush mounted in building walls shall have provision to align the device with the flush plate and to compensate for the thickness of the wall.

**Type 2** enclosures are intended for use indoors to protect the enclosed equipment against falling non-corrosive liquids and falling dirt. They shall have provision for drainage. If provision is made for the entrance of conduit at the top, it shall consist of a conduit hub or the equivalent. When completely and properly installed, these enclosures shall prevent entrance of dripping liquid at a higher level than the lowest live part within the enclosure.

**Type 12** enclosures are intended for use indoors to protect the enclosed equipment against fibers, flyings, lint, dust and dirt and light splashing, seepage, dripping and external condensation of non corrosive liquids. There shall be no holes through the enclosure and no conduit knockouts or conduit openings, except that oiltight and dust-tight mechanisms may be mounted through holes in the enclosure when provided with oil-resistant gaskets. Doors shall be provided with oil-resistant gaskets. In addition, enclosures for combination controllers shall have hinged doors which swing horizontally and require a tool to open.

### TYPE 4X WATERTIGHT & DUSTTIGHT INDOOR & OUTDOOR

**Type 4X** corrosion resistant enclosures are intended for use indoors or outdoors to protect the enclosed equipment against splashing water, seepage of water, falling or hose-directed water, and severe external condensation. They are sleet-resistant but not sleet-(ice) proof. They shall have conduit hubs or equivalent provision for watertight connection at the conduit entrance and mounting means external to the equipment cavity.

### ENCLOSURES FOR HAZARDOUS LOCATIONS- GENERAL

The term "explosion proof" has been so loosely applied that NEMA deprecates its use. As defined by the "National Electrical Code," the term "explosion proof" applies only to Type 7 and 10 enclosures which, when properly installed and maintained, are designed to contain an internal explosion without causing external hazard. The term should not be applied to Type 8 enclosures which are designed to prevent an explosion through the use of oil-immersed equipment or to Type 9 enclosures which are designed to prevent an explosion by excluding explosive amounts of hazardous dust.

### EXPLOSION PROOF - NONVENTILATED ENCLOSURES

**Type 7** enclosures are intended for use indoors in the atmosphere and locations defined as Class I and Group A, B, C or D in the "National Electrical Code." The letter or letters A, B, C or D which indicate the gas or vapor atmospheres in the hazardous location shall appear as a suffix to the designation "Type 7" to give the complete NEMA designation and correspond to Class I, Group A, B, C or D, respectively, as defined in the "National Electrical Code." These enclosures shall be designed in accordance with the requirements of Underwriters Laboratories, Inc, "Industrial Control Equipment for Use in Hazardous Locations," UL 698, and shall be marked to show the Class and Group letter designations.

**Type 9** enclosures are intended for use indoors in the atmospheres defined as Class II and Group E, F or G in the "National Electrical Code." The letter or letters E, F or G which indicate the dust atmospheres in the hazardous location shall appear as a suffix to the designation "Type 9" to give the complete NEMA designation and correspond to Class II, Group E, F or G, respectively, as defined in the "National Electrical Code." These enclosures shall prevent the ingress of explosive amounts of hazardous dust. If gaskets are used, they shall be mechanically attached and of a noncombustible, nondeteriorating, vermin-proof material.

## Cast Iron Strainers IT

Type	IT
Sizes	1/4" to 3"
Connections	NPT
Construction	Cast Iron
Max Saturated Steam Pressure	250 psig
Standard Screen	20 Mesh
Options	60/100 Mesh Screens

Note: 3/8" - 3" IT conforms to WW-S-2739 when equipped with an optional brass plug in the blow-off connection.

### Limiting Operating Conditions (non-shock)

### Pressure Shell Design Conditions

Max. allowable pressure 300 psig/-20-150°F 21 barg/-29-66°C

Max. allowable temperature 406°F/0-250 psig 208°C/0-17 barg

### Construction Materials

No.	Part	Material	
1	Body	Cast Iron	ASTM A 126 CL B
2	Bushing (1/4"-2")	Malleable Iron	
2A	Cap (2-1/2"-3")	Cast Iron	ASTM A 126 CL B
3	Cap Gasket (2-1/2" & 3")	Graphite	
4	Standard Screen	Stainless Steel Type 304	
5	Cap Screws (2-1/2" & 3")	Steel	ASTM A 449

### C<sub>v</sub> Values & Free Area (standard Screen)

Size	C <sub>v</sub>	Free Area (sq. in.)
1/4"	3.5	1.37
3/8"	3.5	1.37
1/2"	6.5	2.20
3/4"	11.5	4.0
1"	20	5.2
1-1/4"	28	6.8
1-1/2"	38	9.45
2"	70	12.56
2-1/2"	100	19.05
3"	160	25.93

Consult factory for free areas of optional screens.

### For water:

$$\text{Pressure Drop} = \frac{(\text{GPM})^2}{(\text{Cv})^2}$$

Consult factory for other liquids.

See TI-7-429-US for pressure drops on steam, air and other gases.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

### Installation

The strainer should be installed with the flow direction as indicated on the body, in a vertical down or horizontal pipeline. The strainer must be accessible for periodic removal of accumulated debris, by either blowing down or removal and cleaning of the screen.

## Fig 16HP Stainless Steel Strainer

### Description

The Fig 16HP is a stainless steel Y-type strainer designed to remove scale, rust and other debris from the pipeline.

The standard stainless steel screen is 1/32" (0.8 mm) perforations.

### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC.

### Certification

The product is available with a manufacturer's Typical Test Report for the body and cap as standard and EN 10204 3.1 to special order at extra cost.

**Note:** All certification/inspection requirements must be stated at the time of order placement.

### Sizes and pipe connections

1/4", 3/8", 1/2", 3/4", 1", 1 1/4" 1 1/2" and 2"

Screwed NPT

Socket weld ends to BS 3799 Class 3000 lb

### Optional extras

#### Strainer screens

Stainless steel screen	Perforations	1/16"(1.6 mm) and 1/8"(3.0mm)
	Mesh	40, 100 and 200
Monel screen	Perforations	1/32"(0.8 mm) and 1/8"(3.0 mm)
	Mesh	100

#### Blowdown valve connections

The cap is drilled to the following sizes to enable a blowdown valve to be fitted.

Strainer size	Blowdown valve
1/4", 3/8" and 1/2"	1/4"
3/4" and 1"	1/2"
1 1/4" and 1 1/2"	1"
2"	1 1/4"

### Pressure/temperature limits

 The product **must not** be used in this region.

### Materials

No. Part	Material
1 Body	1/4" to 1/2" Stainless steel A182 F316L / 1.4404 3/4" to 2" Stainless steel ASTM A351 CF8M / 1.4408
2 Cap	Stainless steel ASTM A351 CF8M / 1.4408
3 Cap gasket	Reinforced exfoliated graphite
4 Strainer screen	Stainless steel A240 316L

Body design conditions	ASME Class 800
PMA Maximum allowable pressure	1,919 psi g @ 100°F
TMA Maximum allowable temperature	1,000°F @ 968 psi g
Minimum allowable temperature	-20°F
PMO Maximum operating pressure	1,919 psi g @ 100°F
TMO Maximum operating temperature	1,000°F @ 968 psi g
Minimum operating temperature	-20°F
<b>Note:</b> For lower operating temperatures consult Spirax Sarco Designed for a maximum cold hydraulic test pressure of 2,900 psi g	

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

1 1/2"	6	5	7	3	164	7.3
2"	7	5	9	3	251	10.9

## Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-S60-17) supplied with the product.

### Warning:

The strainer cap gasket contains a thin stainless steel support ring, which may cause physical injury if not handled and disposed of carefully.

### Disposal

The product is recyclable. No ecological hazard is anticipated with disposal of this product, providing due care is taken.

## How to order

**Example:** 1 off Spirax Sarco 1 1/2" Fig 16HP strainer having screwed NPT connections with a stainless steel screen having 1/32" (0.8 mm) perforations.

## Spare parts

The spare parts available are shown in solid outline. Parts drawn in broken line are not supplied as spares.

### Available spares

Strainer screen (state material, perforations or mesh and size of strainer)	4
Cap gasket (packet of 3)	3

### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the size and type of strainer and perforation or mesh required.

**Example:** 1 off Stainless steel strainer screen having 1/32" (0.8 mm) perforations for a 3/4" Spirax Sarco Fig 16HP strainer.

**Note:** When replacing the strainer cap coat the thread only with anti-seize compound, making sure none gets on the gasket or gasket faces.

## Recommended tightening torques

Standard screen (stainless steel)	1/32"	1/8"	1/32"	1/8"
Optional screen	100 mesh			

### Description

The Fig 34 is an integrally flanged Y-type strainer designed to remove rust, scale and other debris from the pipeline. It is produced from carbon steel, ASTM material.

### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC.

### Certification

The product is available with material certification to EN 10204 2.2 as standard and EN 10204 3.1.B for body and cap by order.

**Note:** All certification/inspection requirements must be stated at the time of order placement.

### Pressure/temperature limits

This product **must not** be used in this region.

- A - A Flanged ANSI 300
- B - B Flanged ANSI 150

Body design conditions		ANSI 300
PMA	Maximum allowable pressure	725 psig @ 99.8°F
TMA	Maximum allowable temperature	749.8°F @ 504 psig

## Fig 18HP Alloy Steel Strainer

### Description

The Fig 18HP is an alloy steel butt weld Y-type strainer with flanged screen cover that has been designed in accordance with ASME B16.34:2004 and ASME VIII. The standard stainless steel screen in the 1/2" to 2" size range has 1/32" (0.8 mm) perforations – See 'Optional extras' for alternative perforations/mesh sizes and screen materials. If required, the strainer cover can be drilled and tapped for blowdown and drain valves.

### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the CE mark when so required.

### Certification

This product is available with certification to EN 10204 3.1 and NACE Approval.

**Note:** All certification/inspection requirements must be stated at the time of order placement.

### Sizes and pipe connections

1/2", 3/4", 1", 1 1/4", 1 1/2", 2"

NPT (ASME B 1.20.1)

Socket weld ASME B 16.11

Butt weld ASME B16.25 Schedule 160, Schedule 80 and Schedule 40

### Optional extras

The following optional extras are available for all unit sizes at an extra cost and must be stated at the time of order placement:

**Perforations:** 1/32" (standard), 3/64", 1/16", 1/8", and 1/4"

Contact Spirax Sarco for availability of perforations not displayed.

M20, M40, M60, M100, M200 and M400

**Mesh:** Contact Spirax Sarco for availability of mesh screens not displayed.

**Screen material:** AISI 316, AISI 316L (standard), AISI 304,

AISI 304L and Monel

### Blowdown connection

The cover is drilled to the following sizes to enable a blowdown valve to be fitted.

**Strainer size**      **Blowdown valve**

1/2" - 1"                      1/2"

1 1/4" - 2"                    1 1/4"

### Pressure / temperature limits

The product **must not** be used in this region.

### Materials

No.	Body	Material	
1	Body	Alloy steel	EN 10213: 1.7379 and ASTM A217 WC9

## Fig 34HP Carbon Steel Strainer

### Description

The Fig 34HP is a cast carbon steel Y-type strainer that has been designed in accordance with ASME B16.34:2004 and ASME VIII, that is readily available with integrally flanged or butt weld connections. The standard stainless steel screen in the 1/2" to 3" size range has 0.8 mm perforations, and 1.6 mm perforations in the 4" to 8" size range - See 'Optional extras' for alternative perforations / mesh sizes and screen materials. If required, the strainer cover can be drilled and tapped for blowdown and drain valves.

### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the CE mark when so required.

### Certification

This product is available with certification to EN 10204 3.1 and NACE Approval.

**Note:** All certification / inspection requirements must be stated at the time of order placement.

### Sizes and pipe connections

#### Flanged:

ASME (ANSI) B16.5 Class 600 and ASME (ANSI) 600 RTJ - 1/2", 3/4", 1", 1 1/2", 2", 2 1/2", 3", 4", 6" and 8"

**Screwed:** NPT - 1/2", 3/4", 1", 1 1/2" and 2"

#### Socket weld:

## Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-S60-18) supplied with the product.

### Installation note:

The strainer should be installed in the direction of flow, as indicated on the body. On applications involving steam or gases the pocket should be in horizontal plane. On liquid systems the pocket should point downwards.

### Warning:

The strainer cover gasket contains a thin stainless steel support ring, which may cause physical injury if not handled and disposed of carefully.

### Disposal

This product is recyclable. No ecological hazard is anticipated with the disposal of this product, provided due care is taken.

## How to order

**Example:** 1 off Spirax Sarco 1½" Fig 34HP strainer having the standard stainless steel screen with 0.8 mm perforations and flanged ANSI 600 connections.

## Spare parts

The spare parts available are shown in solid outline. Parts drawn in broken line are not supplied as spares.

### Available spares

Cover gasket (packet of 3)		<b>3</b>
Strainer screen + Cover gasket	Strainer screen	<b>4</b>
	Cover gasket	<b>3</b>

### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the size and type of strainer and perforation or mesh required.

**Example:** 1 - Strainer screen + Cover gasket. The strainer screen is to be stainless steel having 0.8 mm perforations for a 2" Spirax Sarco Fig 34HP strainer having ANSI 600 flanged connections.

## Fig 36 Austenitic Stainless Steel Strainer

### Description

The Fig 36 is an austenitic stainless steel integrally flanged Y-type strainer. The standard stainless steel screen in the 1/2" to 3" size range has 1/32" (0.8 mm) perforations, in the 4" to 8" size range it has 1/16" (1.6 mm) perforations. Other perforations, mesh sizes and monel screens are available as options. The strainer cap can be drilled and tapped for blowdown and drain valves if required.

### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the CE mark when so required.

### Certification

The product is available with a manufacturers' Typical Test Report as standard and EN 10204 3.1 for body and cap by special request.

**Note:** All certification/inspection requirements must be stated at the time of order placement.

### Optional extras

#### Strainer screens

Stainless steel screens	Perforations	1/16" (1.6 mm) 1/2" to 3"
		1/8" (3.0 mm) 1/2" to 8"
	Mesh	40, 100, 200
Monel screens	Perforations	1/32" (0.8 mm) 1/2" to 3"
		1/16" (1.6 mm) 4" to 8"
	Mesh	100

#### Standard blowdown valve connections.

The cap is drilled to the following sizes to enable a blowdown valve to be fitted. Threaded (NPT)

Strainer size	Blowdown valve
1/2"	1/4"
3/4" to 1"	1/2"
1 1/4" and 1 1/2"	1"
2" to 5"	1 1/4"
6" and 8"	2"

#### Pressure/temperature limits

**This product must not be used in this region.**

- A - B Flanged ANSI 300.
- A - D Flanged ANSI 150.

Body design conditions	ANSI 300
PMA Maximum allowable pressure	595 psig @ 100°F
TMA Maximum allowable temperature	842°F @ 305 psig
Minimum allowable temperature	-20°F
	ANSI 150 232 psig
PMO Maximum operating pressure	ANSI 300 595 psig
TMO Maximum operating temperature	892°F @ 305 psig
Minimum operating temperature	-20°F

**Note:** For lower operating temperatures consult Spirax Sarco. Designed for a maximum cold hydraulic test pressure of 1102 psig

### Sizes and pipe connections

Standard flange: 1/2", 3/4", 1", 1 1/4", 2", 2 1/2", 3", 4", 5", 6", and 8"

ANSI Class 150 and ANSI Class 300 (All sizes)

### Materials

No.	Part	Size	Material
1	Body		Austenitic stainless steel ASTM A351 CF3M
2	Cap	1/2" - 2"	Austenitic stainless steel ASTM A182F316L
		2 1/2" - 8"	Austenitic stainless steel ASTM A351 CF3M
3	Cap gasket		Reinforced exfoliated graphite
4	Strainer screen		Austenitic stainless steel ASTM A240 316L
5	Cap bolt		Austenitic stainless steel ISO 3506 A2-70

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

## Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-S60-18) supplied with the product.

### Installation note:

The strainer should be installed in the direction of flow, as indicated on the body. On applications involving steam or gases the pocket should be in the horizontal plane. On liquid systems the pocket should point downwards. Suitable isolation valves must be installed to allow for safe maintenance and trap replacement.

### Maintenance note:

Maintenance can be completed with the strainer in the pipeline, once the safety procedures have been observed. It is recommended that a new gasket is used whenever maintenance is undertaken.

### Warning:

The strainer cap gasket contains a thin stainless steel support ring, which may cause physical injury if it is not handled and disposed of carefully.

### Disposal

The product is recyclable. No ecological hazard is anticipated with disposal of this product, providing due care is taken.

## How to order

**Example:** 1 off Spirax Sarco 1 1/4" Fig 36 strainer having a stainless steel screen with 1/32" 0.8 mm perforations. The connections are to be flanged ANSI 150.

## Spare parts

The spare parts available are shown in solid outline. Parts drawn in broken line are not supplied as spares.

### Available spares

Strainer screen (state material, size of perforations or mesh and size of strainer)	4
Cap gasket (3 off)	3

### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the size and type of strainer and perforation or mesh required.

**Example:** 1 off stainless steel strainer screen, having 1/32" (0.8 mm) perforations for a 2" Spirax Sarco Fig 36 strainer having ANSI 150 connections.

## Fig 36HP Stainless Steel Strainer

### Description

The Fig 36HP is a Stainless steel Y-type strainer that has been designed in accordance with ASME B16.34:2004 and ASME VIII, that is readily available with integrally flanged or butt weld connections. The standard stainless steel screen in the 1/2" to 3" size range has 1/32" (0.8 mm) perforations, and 1/16" (1.6 mm) perforations in the 4" to 8" size range - See 'Optional extras' for alternative perforations / mesh sizes and screen materials. If required, the strainer cover can be drilled and tapped for blowdown and drain valves.

### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the CE mark when so required.

### Certification

This product is available with certification to EN 10204 3.1 and NACE Approval.

**Note:** All certification / inspection requirements must be stated at the time of order placement. NACE Certification cannot be done after shipment.

### Sizes and pipe connections

#### Flanged:

ASME (ANSI) B16.5 Class 600 and ASME (ANSI) 600 RTJ - 1/2", 3/4", 1", 1 1/2", 2", 2 1/2", 3", 4", 6", and 8"

**Screwed:** NPT - 1/2", 3/4", 1", 1 1/2" and 2"

#### Socket weld:

ASME (ANSI) B16.11 Class 3000 - 1/2", 3/4", 1", 1 1/2" and 2"

#### Butt weld:

ASME (ANSI) B16.25 Schedule 40 and Schedule 80 - 1/2", 3/4", 1", 1 1/2", 2", 2 1/2", 3", 4", 6" and 8"

### Optional extras

The following optional extras are available for all unit sizes at an extra cost and must be stated at the time of order placement:

3/64" (1 mm), 1/16" (1.6 mm), 1/8" (3 mm) and 1/4" (6 mm)

**Perforations:** Contact Spirax Sarco for availability of perforations not displayed.

**Mesh:** M20, M40, M60, M100, M200 and M400  
Contact Spirax Sarco for availability of mesh screens not displayed.

**Screen material:** AISI 316, AISI 316L (standard), AISI 304, AISI 304L and Monel

### Blowdown valve connection

The cover is drilled to the following sizes to enable a blowdown valve to be fitted. Threaded (NPT) or socket weld available

Strainer size	Blowdown valve
1/2"	1/4"
3/4" and 1"	1/2"
1 1/2"	1"
2" to 4"	1 1/4"
6" to 8"	2"

### Materials

No.	Part	Material	
1	Body	Stainless steel	EN 10213 1.4408 and ASTM A351 CF8M
2	Cover	Stainless steel	EN 10213 1.4408 and ASTM A351 CF8M
3	Cover gasket	Stainless steel + Graphite	Spiral wound
4	Strainer screen	Stainless steel	AISI 316L
5	Cover stud	Stainless steel	ASTM A193 Gr. B8M2
6	Cover nut	Stainless steel	ASTM A194 Gr. 8M

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

## TP1 and TP2 Stainless Steel Temporary Cone Shaped Strainers

### Description

The conical (TP1) and truncated conical (TP2) temporary strainers have been designed to fit between two flanges and are generally used during commissioning and start-up to remove any coarse debris. They are suitable for use on a wide range of fluids for applications in process lines, hot water systems, steam and condensate systems etc. The standard screens are manufactured using 3 mm perforated stainless steel. Other perforations or material of construction are available on request.

Temporary strainers are not intended to be used for permanent applications. Contact Spirax Sarco when permanent applications are required.

### Standards

Designed in accordance with BS EN 14341:2006. These products fully comply with the requirements of the European Pressure Equipment Directive 97 / 23 / EC and carry the  mark when so required.

### Certification

These products are available with certification to EN 10204 3.1 and NACE approval. **Note:** All certifications/inspections requirements must be stated at the time of order placement.

### Sizes and pipe connections

1½" – 28"

Designed for installation between the following flanges:

ASME (ANSI) 150, 300 and 600

### Materials

No.	Part	Material
1	Collar	Stainless steel AISI 304L
2	Screen	Stainless steel AISI 304L
3	Mesh lining	Stainless steel AISI 304L

### Optional extras

The following optional extras are available for all unit sizes at an extra cost and must be stated at the time of order placement:

**Perforations:** 3 mm (standard), 1.6 mm and 6 mm. Contact Spirax Sarco for availability of perforations not displayed.

**Mesh:** M40, M100 and M200. Contact Spirax Sarco for availability of mesh screens not displayed.

**Screen material:** AISI 304L (standard), AISI 316L and Monel 400.

**Specific surface finish for collar:** Ra 0.025 µm to 50 µm.

TI-P169-06-US 10.11

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.*

*In the interests of development and improvement of the product, we reserve the right to change the specification.*

# BT6-B Sanitary Balanced Pressure Thermostatic Steam Trap

### Description

The Spirax Sarco BT6-B sanitary balanced pressure thermostatic steam trap is designed to remove condensate from clean and pure steam applications with minimal condensate retention. Applications include sterile steam barriers, block and bleed installations, mains drainage and CIP/SIP of vessels and reactors and process lines. Manufactured in 316L, the crevice free body design of the BT6-B incorporates a 15° angled seat to ensure full drainability. The standard element is extremely sensitive to changes in condensate temperature and is designed to open with a minimum of sub-cooling, less than 3.6°F (2°C) from steam saturation temperature at pressures below 36 psig (2.5 barg) for typical operating conditions. Exact operating performance may be affected by operating pressure, installation and ambient conditions. Each trap is individually packaged within a 'clean' environment with protective end caps and sealed in a protective plastic bag.

### Available types

<b>BT6-BL</b>	Low capacity
<b>BT6-BH</b>	High capacity

### Body surface finish (measured to ISO 4287-1997 and ISO 4288-1997):

- Internal surfaces have a finish of mechanical and electropolishing to 0.375 µm (15 µ-in Ra)
- External surfaces have a finish of 1.0 µm (40 µ-in Ra)

### Options:

- For applications requiring closer to steam saturation temperatures, for example, critical SIP applications, please consult Spirax Sarco.

### Standard

This product fully complies with ASME BPE and the requirements of the European Pressure Equipment Directive 97/23/EC. All seals comply with FDA CFR title 21, part 177, section 1550 and USP24 class VI.

### Certification

This product is available with the following certification at extra cost:

- EN 10204 3.1 material certificates.
- Typical internal surface finish certificates.
- Typical certification of seals FDA/USP/ADI and 3-A compliance.

**Note:** All certification / inspection requirements must be stated at the time of order placement.

### Sizes and pipe connections

½", ¾", 1" and 1½" sanitary clamp ends to ASME BPE. For other connections please consult Spirax Sarco.

### Materials

No.	Part	Material
1	Body (inlet)	Stainless steel ASTM A276 316L
2	Body (outlet)	Stainless steel ASTM A276 316L
3	Capsule element	Stainless steel AISI 316L
4	Body clamp	Stainless steel AISI 316
5	Seal	Tuf-Steel® PTFE & AISI 316

### Pressure / temperature limits (ISO 6552)

- Light grey shaded area: The product must not be used in this region.
- Dark grey shaded area: The product should not be used in this region as damage to the internals may occur.

**Note:** For hygienic/sanitary clamp ends the maximum pressure / temperature may be restricted by the gasket or sanitary clamp used. Please consult Spirax Sarco.

Body design condition	PN10
PMA Maximum allowable pressure	145psig@284°F (10barg@140°C)
TMA Maximum allowable temperature	350°F@133psig (177°C@9.2barg)
Minimum allowable temperature	-425°F (-254°C)
PMO Maximum operating pressure for saturated steam service	87 psig (6barg)
TMO Maximum operating temperature	329°F@87psig (165°C@6barg)
Minimum operating temperature	32°F (0°C)
Designed for a maximum cold hydraulic test pressure of	218 psig (15 barg)

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.

In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-P180-30-US 1.15

High Purity

## Capacities (in accordance with ISO 7842)

## Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P180-31) supplied with the product.

### Installation note

The BT6-B is designed to be installed in vertical lines with the flow downwards so that the body is self-draining. Check the flow arrow on the body for correct orientation. Fittings and pipe clamps are not supplied.

Installation should include a suitable cooling leg to avoid condensate back-up into process equipment under normal operating conditions.

Do not expose the capsule element to superheat conditions. Handle all components carefully to avoid damage to surfaces.

### Operation

The operation relies on a stainless steel capsule that is filled with a temperature sensing fluid. During cold or start-up conditions the capsule will be fully open allowing large volumes of air, condensate and/or CIP fluid to be drained. As the system approaches steam temperature the fluid in the capsule expands and the valve closes the trap to prevent live steam loss. This closure occurs very close to steam temperature to ensure efficient drainage of the system.

### How to order

**Example:** 1 off Spirax Sarco 1/2" BT6-BH sanitary balanced pressure thermostatic steam trap with self-draining body. Connections to be sanitary clamp ends to meet the requirements of ASME BPE. Suitable for pressure up to 6 bar g. Internal surface finish to be electropolished to 15 µ-in Ra (0.375 µm). Material certification to EN 10204 3.1 for pressure containing parts.

### Sample Specification

Balanced pressure steam traps with in-line connections shall be designed for specific use in sanitary/hygienic applications. The trap shall be suitable for CIP/SIP systems requiring large cold condensate discharge capacities at low pressures typically encountered at the start of sterilizing cycles. The trap must be available in both high and low capacity versions. High capacity traps must discharge at least 2400 lb/h (1100 kg/h) of cold condensate with 3'3" (1.4 psi) water column differential. Traps must open approximately 3.6°F (2°C) below steam temperature at discharge pressures of 36 psig (2.5 barg) or less for minimal sub-cooling of condensate, and typical condensate back up shall be 6" (150 mm) or less at all times. The trap shall have a sanitary safety body clamp and housing design to prevent accidental disassembly and incorrect reassembly. The trap shall be self-draining with at least a 15° angled seat to ensure full drainability when mounted vertically. Construction shall be of 100% 316L, including bodies, internals and related systems. The maximum allowable internal surface finish for wetted parts shall be 15 µ-inch Ra (0.375 µm), and 40 µ-inch Ra (1 µm) for external surfaces. Traps must comply fully with ASME BPE and the European PED 97/23/EC, and all seals must comply with FDA CFR title 21, part 177, section 1550 and USP24 class VI.

## Dimensions/weights (approximate) in inches and pounds (mm and kg)

## BTM7

# Stainless Steel Thermostatic Clean Steam Trap

### Description

The Spirax Sarco BTM7 is a maintainable thermostatic steam trap designed to remove condensate from clean steam systems with minimal backing up. Applications include sterile steam barriers, process vessels and CIP/SIP systems. Manufactured in 316L stainless steel with minimal crevices, it is self-draining and operates close to steam temperature. Traps are individually packaged with protective end caps and sealed in a polythene bag.

### Standards

The BTM7 has been designed in general accordance with ASME BPE. It also complies with the requirements of the European Pressure Equipment Directive 97 / 23 / EC.

All wetted parts of this trap are manufactured from FDA approved materials.

Part 3, 'O' ring - Complies with USP Class VI and FDA CFR title 21, Paragraph 177, Section 2600.

### Certification

This product is available with certification to EN 10204 3.1.

**Note:** All certification / inspection requirements must be stated at the time of order placement.

**Fixed bleed** to ensure fail open operation available at extra cost

### Sizes and pipe connections

¼", ½", ¾", 1" screwed BSP or NPT.

½", ¾", 1" O/D x 16 swg (0.065") wall thickness tube end.

½", ¾", 1" sanitary clamp compatible hygienic connection.

### Pressure and Temperature Limits

Body design conditions	PN7
PMA Maximum allowable pressure	102 psig @ 338°F (7 barg @ 170°C)
TMA Maximum allowable temperature	338°F @ 102psig (170°C @ 7 barg)

### Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P180-05) supplied with the product.

Installation note:

The trap is designed for installation in vertical lines with the flow downward to ensure self-draining operation. Do not expose element to superheat conditions since over-expansion may result. Suitable isolation valves must be installed to allow for safe maintenance / replacement.

### Sample Specification

Steam trap shall be self-adjusting balanced pressure type capable of operating close to saturated steam temperature. All wetted parts shall be manufactured from 316L stainless steel. Trap shall be sealed construction and shall be completely self-draining when installed in vertical pipeline. Connections shall be 0.065" extended O.D. tube, Tri-Clamp® compatible, or screwed NPT. All wetted parts of this trap are manufactured from FDA/3-A approved materials.

## BTS7 and BTS7.1 Stainless Steel Clean Steam Traps

### Description

The Spirax Sarco BTS7 and BTS7.1 are sealed thermostatic steam traps designed to remove condensate from clean steam systems with minimal back up. Applications include sterile steam barriers, process vessels and CIP / SIP systems. Manufactured in 316L stainless steel with minimal crevices, it is self-draining and operates close to steam temperature. When supplied, they are individually packaged with protective end caps and sealed in a polythene bag.

### Options

Fixed bleed to ensure fail open operation.

### Standards

The BTS7 and BTS7.1 fully comply with the ASME BPE, where applicable. They also comply with the requirements of the European Pressure Equipment Directive 97/23/EC. All wetted parts of these traps are manufactured from FDA/3-A approved materials.

### Certification BTS7: Certification to EN 10204 2.2

This product is available with certification to EN 10204 3.1. **Note:** All certification/inspection requirements must be stated at the time of order placement.

### Surface Finish

BTS7.1	Internal 20µin (0.5µm) Ra. SF1 External 32 µin (.075µm) Ra.
BTS7	Machined finish

### Sizes and pipe connections

**BTS7.1:** 1/2" and 3/4" with sanitary clamp connections.

### BTS7:

## Thermo-Dynamic® Steam Trap BTD52L

The BTD52L Thermo-Dynamic® Steam Trap is constructed entirely of 316L stainless steel and is suitable for aggressive condensate often found in clean steam systems using deionized water. Condensate and air are discharged at saturated steam temperature without the need for a water seal.

<b>Model</b> □	<b>BTD52L</b>
<b>PMO</b>	150 psig
<b>Sizes</b>	1/4", 3/8" & 1/2"
<b>Connections</b>	NPT, 0.065" O.D. Tube (1/2" only) Tri-Clamp®* compatible (1/2" only)
<b>Construction</b>	316L Stainless Steel
<b>Options</b>	BSP connections Insulcap

\* A registered trademark of Tri-Clover Inc.

### Typical Applications

In the biotechnology, pharmaceutical, fine chemical, food, dairy and beverage industries: main drip service, WFI system sterilization, and drainage of steam filter housing and separators.

### Limiting Operating Conditions

**Max. Operating Pressure (PMO)** 150psig (10 barg)

Minimum pressure for satisfactory operation is 3.5 psi (0.24 bar)  
Maximum back pressure should not exceed 80% of the inlet pressure under any conditions of operation, otherwise the trap may not shut.

**Max. Operating Temperature** 850°F(454°C)  
at all operating pressures

### Pressure Shell Design Conditions

**PMA** 230 psig/0-850°F 16 barg/0-454°C

## Options

**Insulcap** – The insulcap is a friction-fit cover designed to reduce the effect of excessive heat loss resulting from low ambient temperatures, wind, rain, etc. Available as a spare part.

## Sample Specification

Steam trap shall be all ANSI 316L stainless steel thermodynamic disc type with connections on a common center line which can be installed in any position. Integral seat design. Shall not require any water seal for normal operation. Spirax Sarco type BTD52L for all pressures between 3.5 psig (0.24 barg), and 150 psig (10 barg).

## Installation

Preferably install in a horizontal line as close as possible to equipment or pipeline being drained. For freeze proof or self-draining installations, or where horizontal fitting is not possible, the BTD52L may be installed vertically. Full-flow isolating valves should be installed upstream and downstream of the trap.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation of the trap from both supply and return line is required before any servicing is performed.

The trap should be disassembled periodically for inspection and cleaning of the disc and seat.

The only wearing parts of the trap are the disc and seat rings, which should be inspected and cleaned periodically. Slight wear can often be corrected by resurfacing on a lapping plate.

Complete installation and maintenance instructions are given in the IMI sheet, which accompanies the product.

# Horizontal BT6 Hygienic Sanitary Balanced Pressure Steam Trap

## Description

The Spirax Sarco Horizontal BT6 thermostatic balanced pressure steam trap is designed to remove condensate from hygienic and sanitary steam systems with minimal backing up. Applications include sterile steam barriers, block and bleed systems, drainage of steam distribution lines, process vessels and CIP/SIP systems. Manufactured in 316L stainless steel with a crevice free body, it is self-draining and operates close to steam temperature. Traps are individually packaged with protective end caps and sealed in a polythene bag.

## Surface finish

All internal wetted surfaces have a finish of 32 µm in Ra (0.8 µm).

## Standards

The Horizontal BT6 fully complies with the ASME BPE, where applicable. It also complies with the requirements of the European Pressure Equipment Directive 97/23/EC. The seal complies with FDA CFR title 21, paragraph 177, section 1550. All wetted parts of this trap are constructed from FDA/3-A approved materials.

## Certification

This product is available with certification to EN 10204 3.1.B. Note: All certification/inspection requirements must be stated at the time of order placement.

## Sizes and pipe connections

½" sanitary clamp compatible connections.

## Capacities

Body design conditions		PN10
PMA	Maximum allowable pressure	338°F@145psig (140°C@10 bar g)
TMA	Maximum allowable temperature	350°F@132psig (177°C@9.2 barg)
Minimum allowable temperature		-425°F (-254°C)
PMO	Maximum operating pressure	87 psig (6 bar g)
for saturated steam service		
TMO	Maximum operating temperature	329°F@87psig (165°C@6 bar g)
Minimum operating temperature		32°F (0°C)
Designed for a maximum cold hydraulic test pressure of		217 psig (15 bar g)

## Construction Materials

No.	Part	Material	
1	Body (Inlet Side)	Stainless Steel	ASTM A276-87 Gr. 316L
2	Body (Outlet Side)	Stainless Steel	ASTM A276-87 Gr. 316L
3	Element	Stainless Steel	AISI 316L
4	Body Clamp	Stainless Steel	AISI 304L
5	Gasket	PTFE Jacketed Viton	

**Note:** PTFE complies with FDA, CFR title 21, paragraph 177, section 1550. All wetted parts of this trap are constructed from FDA approved materials.

## Material Certification

Actual mill test reports covering the Horizontal BT6 body material are available if specified at the time of ordering.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

# Horizontal BT6 Hygienic Sanitary Balanced Pressure Steam Trap

## Dimensions/weights (approximate) in inches and lb

Size	A	B	C	D	E	Weight
½"	2.6"	2.1"	2.1"	1.4"	3.3"	1.9 lb

## Spare parts

### Available spares

Element assembly	1
Seal Gasket Kit (set of 3)	2

## How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the size and type of trap.

**Example:** 1 - Element assembly for a Spirax Sarco ½" Horizontal BT6 hygienic sanitary balanced pressure steam trap.

## Installation

The trap is designed to be fitted in horizontal lines with the flow downwards so that it can be completely self-draining. Check flow arrow for correct orientation. Fittings, clamps and gaskets for pipe end connections are not supplied. Do not over expose the element to superheat conditions since over expansion may result.

Note: The body and element must be handled carefully to ensure that the machined surfaces are not damaged.

## Sample Specification

Steam trap shall be self-adjusting balanced pressure type capable of operating close to saturated steam temperature. All wetted parts shall be manufactured from 316L grade stainless steel with body parts finished internally and externally to 32 µ in Ra. Trap shall have body clamp to allow maintenance of internals, and shall be completely self-draining when installed in vertical pipeline.

## Maintenance

Before undertaking any maintenance on the trap, it must be isolated from the supply line and return line and any pressure allowed to normalize to atmosphere. The trap assembly should then be allowed to cool.

## Stainless Steel Balanced Pressure Thermostatic Air Vent AVM7

### Description

The AVM7 (maintainable) is a vertical body thermostatic air vent, with all AISI 316L construction designed for use in clean steam systems. Normal operation is close to saturated steam temperature.

Model	AVM7
PMO	102 psig
Sizes	1/4, 1/2", 3/4", 1"
Connections	0.065" O.D. Tube, NPT or Tri-Clamp®*
Construction	All 316L Stainless Steel
Options	3.1B available (upon request) FEP encapsulated silicone 'O' ring is recommended and available. For use on systems where there is, or maybe lactic acid present.

\* A registered trademark of Tri-Clover Inc.

### Typical Applications

Fermenter sterilization, steam barriers (block & bleed systems), sterilizer drainage and air venting, CIP/SIP system condensate drainage, and sterilization of process vessels and pipes.

### Limiting Operating Conditions

Max. Operating Pressure (PMO) 102 psig (7 barg)

Max. Operating Temperature Saturated Steam Temperature

## Sample Specification

Steam trap shall be self-adjusting balanced pressure type capable of operating close to saturated steam temperature. All wetted parts shall be manufactured from 316L stainless steel. Air Vent shall be maintainable, and shall be completely self-draining when installed in vertical pipeline. Connections shall be 0.065" extended O.D. tube, Tri-Clamp® compatible, or screwed NPT.

## Installation

The traps are designed for installation in vertical lines with the flow downward to ensure self-draining. The element may be damaged if it is exposed to superheated steam. Full-flow isolating valves, such as Spirax Sarco Model M70i Clean Steam Ball Valve, should be installed so as to permit servicing.

## Maintenance

The AVM7 is a maintainable trap. Maintenance on the AVM7 can be performed once the steam trap is isolated from system and return line pressure. Complete Installation & Maintenance instructions are given in IM-P123-23, which is included with the product.

## Stainless Steel Sanitary Pressure Regulator SRV6

The SRV6 is an angle pattern, sanitary pressure regulator with polished 316/316L stainless steel construction for use on steam, process liquids and gases.

<b>Model</b>	SRV6
<b>Sizes</b>	1", 1-1/2", 2"
<b>Connections</b>	Sanitary Clamp
<b>Construction</b>	All 316/316L Stainless Steel Wetted Parts

### Typical Applications

Clean steam, gas, and liquid supplies to bioreactors, centrifuges, freeze dryers (lyophilizers), sterilizers, autoclaves, process tanks, production suites, humidifiers, and culinary equipment.

### Construction Materials

No.	Part	Material
1	Adjusting screw	Stainless Steel (PTFE coated) AISI 303
2	Lock nut	Stainless Steel AISI 304
3	Spring chamber	Stainless Steel AISI 316L
4	Spring pusher	Stainless Steel AISI 304
5	Spring	Stainless Steel
6	Diaphragm nut	Stainless Steel AISI 304
7	Spring washer	Stainless Steel
8	Spacer ring	Stainless Steel AISI 304
9	Retainer	Stainless Steel AISI 304
10	Upper disc	Stainless Steel AISI 304
11	V-band clamp	Stainless Steel AISI 300 Series
12	Lower disc	Stainless Steel AISI 316
13	Main valve	Stainless Steel AISI 316
14	Body	Stainless Steel AISI 316L
15	Diaphragm	Viton/PTFE (FDA approved)

### Surface Finish

All wetted parts mechanically polished to 20 microinch Ra then electropolished. All external parts electropolished.

### Pressure Ranges

Downstream Control Range: 7-75 psi 0.5– 5.2 bar

### Shutoff

ANSI Class III

Note: The SRV6 should **not** be used for line isolation. If line isolation is required, a suitable shut-off valve should be installed upstream of the SRV6.

### Limiting Operating Conditions

Max. Operating Pressure (PMO) 116 psig 8.0 barg

Max. Operating Temperature 347°F 175°C

### Pressure Shell Design Conditions

PMA 232 psig 15 barg

Max. allowable pressure

TMA 347°F 175°C

Max. allowable temperature

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

High Purity

# Stainless Steel Sanitary Pressure Regulator SRV6

## Valve Selection:

### Step 1

#### For Steam:

Establish whether the flow is critical or non-critical, and calculate the required  $C_v$  using one of the following formula:

$$\text{Critical } \Delta P \quad C_v = \frac{Q}{1.6 \times P_1}$$

$P_2 < 1/2 P_1$

$$\text{Noncritical } \Delta P \quad C_v = \frac{Q}{3.2 \times \sqrt{(P_1 - P_2) \times P_2}}$$

$P_2 > 1/2 P_1$

All pressures in psi absolute

#### For Liquids:

Calculate the required  $C_v$  using the following formula:

$$C_v = W \sqrt{\frac{S.G.}{\Delta P}}$$

Q = Steam load lb/h  
P1 = Primary pressure (psia)  
P2 = Secondary pressure (psia)  
W = Liquid flow rate (GPM)  
SG = Specific gravity of liquid  
 $\Delta P$  = Pressure differential

### STEP 2

For highest control accuracy, especially on widely fluctuating loads, select the valve size with the closest  $C_v$  at 20% droop to the required value.

For steady load applications, or where high accuracy of control is not required, the maximum  $C_v$  figure can be used for selection.

C <sub>v</sub> Values				
Valve size	1"	1-1/2"	2"	
Average C <sub>v</sub> at 20% droop	2.5	3.0	4.2	
Maximum C <sub>v</sub>	5.5	13.5	27	

## Dimensions

### Dimensions (nominal) in inches and millimeters

## Installation

The SRV6 should be installed with the inlet vertical and the spring chamber upward. Full installation instructions accompany each valve.

## Maintenance

Complete isolation of the valve is required before any servicing is performed. Full installation & maintenance instructions are given in IMI 3.111 which accompanies the product.

## Spare Parts

Main Valve A  
Diaphragm B  
Only parts listed above are available as spares.

## Sample Specification

Stainless steel sanitary pressure regulator shall be diaphragm actuated with integral valve guide and have all wetted parts in AISI 316/316L mechanically polished to 20 microinch Ra then electropolished. All parts AISI 300 series with electropolished external surfaces. Angle pattern design shall be fully self-draining when installed with inlet vertical. Spirax Sarco SRV6 sanitary pressure regulator

High Purity

# SSC20 Sanitary Sample Cooler

## Description

The Spirax Sarco SSC20 sanitary sample cooler has been specifically designed for taking high quality chemical, conductivity and microbiological samples quickly and safely from clean/pure steam, water for injection (WFI) and other high purity media systems.

The unit consists of high quality 316L stainless steel components and utilizes a counter current flow to maximize cooler efficiency, resulting in a compact, space saving design.

All sample contact surfaces are compliant to current ASME BPE requirements, surface finish of better than 20  $\mu$ -in Ra (0.5  $\mu$ -m Ra).

The unit is provided with an integral pre drilled mounting bracket to allow simple installation at point of use.

## Principal features:

- Internal surface finish of coil better than 20  $\mu$ -in Ra (0.5  $\mu$ -m Ra) to ensure high sterility.
- Coil manufactured from fully traceable 316L stainless steel.
- Self-draining design to eliminate sample retention.
- Fully sterilizable/autoclavable - to ensure integrity of unit between samples.
- Integral mounting bracket to facilitate simple installation.

## Sizes and pipe connections

Cooling water inlet and outlet connections	NPT version	1/2" NPT
	Optional - BSP version	1/2" BSP

Sample tube inlet and outlet connections	1/2" adaptor for clamp fitting (clamp not supplied) on sample inlet. 6 mm O/D on sample outlet.
--	--

## Limiting conditions

Part	Design temperature	Design pressure
Body	212°F	145 psig
Cold hydraulic test pressure		232 psig

The product must not be used in this region.

**Clamp** - Pressure and temperature dependent on clamp manufacturers recommendation.

## Materials

Body	Austenitic stainless steel grade 316L
Coil	Austenitic stainless steel grade 316L

## Surface finish

Sample contact surfaces are compliant to current ASME BPE requirements.

Ra Maximum 20  $\mu$ -in Ra (0.5  $\mu$ -m Ra).

## Packaging

All packaging of the SSC20 sanitary sample cooler is conducted in a clean environment segregated from other non stainless steel manufacture and is in accordance with ASME BPE:

- Sample Inlet and outlet connections are capped.
- Sample coolers are sealed in 100-micron thick plastic bags.

## Certification

If requested at the time of order the SSC20 can be supplied with the following certification:

- Materials certificates to EN 10204 3.1
- Internal coil surface finish certification.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-P403-82-US 5.13

High Purity

# SSC20 Sanitary Sample Cooler

## Performance

The tables below show typical sample outlet temperatures above cooling water inlet temperatures for several pressures and cooling water flowrates.

### Example

A sample flowrate of 0.13 GPM is required from a boiler operating at 145 psig. For a cooling water flowrate of 4.8 GPM from Table 1 the sample outlet temperature would be 7°F above the cooling water inlet temperature. If the cooling water is at 60°F, the sample temperature would be 67°F. Table 2 is used in the same way for steam. Samples may not be taken where marked '-' as the flow is limited by the sample inlet valve capacity.

**Table 1 Saturated water (e.g. boiler water)**

## Dimensions (approximate) in inches

A	B	C	D	E	F	G	H	J
16.1	13.8	11.8	3.5	1.0	0.9	0.5	17.7	2.2

## How to order

Example: 1 of Spirax Sarco type SSC20 sanitary sample cooler with 1/2" sanitary clamp sample inlet connection and maximum coil internal surface finish of 20 µ-in Ra (0.5 µ-m Ra). The cooling water connections are to be BSP.

## Installation

See Installation and Maintenance Instructions for full details, as insufficient information is given here for safe installation.

### Notes on installation

**WARNING:-** To avoid the risk of scalding, it is essential that a full flow of cooling water is present before opening the sample inlet valve. Always close the sample inlet valve before turning off the cooling water. Sample pipework becomes very hot under normal working conditions, and will cause burns if touched.

We recommend the use of corrosion resistant pipework suitable for the fluid being sampled.

Keep the length of all pipe runs to the minimum.

Cooling water must be clean and free from scale forming salts.

The sample cooler must be mounted vertically.

The cooling water inlet is connected in 1/2" nominal bore pipe via an inlet valve.

The cooling water outlet should be piped to an open drain or funnel.

The sample inlet pipe should be in 6 mm O/D tube.

We recommend that a funnel piped to drain is located under the outlet, with sufficient space below it for a beaker or similar sample container.

## Weights (approximate)

Cooler	6.8 lbs

## Stainless Steel Filter CSF26

The CSF26 is an in-line all 316 stainless steel filter suitable for use in steam, gas and liquid systems. The CSF26 is USDA approved, and conforms to the requirements of 3-A Accepted Practice Number 609-03 for the production of culinary steam. The CSF26 utilizes a fully cleanable sintered stainless steel element for reduced cost of ownership.

Model	CSF26
Sizes	1/2", 3/4", 1", 1-1/2", 2", 2-1/2", 3"
Connections	NPT (1/2" - 2"), ANSI 150 (2-1/2" & 3")
Construction	Body: 316 Stainless Steel Element: 316 Stainless Steel
Element Rating	2.8 microns Absolute
Options	Tri-Clamp® compatible, flanged ANSI 150 (1/2"-2") and BSP connections, 4" & 6" sizes

### Typical Applications

The CSF26 is ideally suited for culinary applications, where steam is being directly injected into food product, wash-down water, etc. Other applications include autoclaves, sterilizers and humidification systems often found in the healthcare and pharmaceutical industries.

### Limiting Operating Conditions

Max. Operating Pressure (PMO) 150 psig/(10.3 barg)

Max. Operating Temperature (TMO) 366°F/(186°C)

### Pressure Shell Design Conditions

PMA 275 psig/0-100°F 19 barg/0-38°C

Max. allowable pressure

TMA 750°F/0-95 psig 399°C/0-6.5 barg

Max. allowable temp.

Element Design Conditions 15 psi/1 bar

Max. element differential pressure

For liquid and gas applications, consult factory.

Higher capacities are available with 4" and 6" size filters. For further information, consult factory.

## Steam Filter Efficiency

The 2.8 micron absolute rated filter element will remove 95% of all particles exceeding 2 microns.

## Filter Stations

Also available from Spirax Sarco are a range of steam filter stations which conform to the requirements of the 3-A Accepted Practice Number 609-03. Each filter station includes a moisture separator with trap-set, strainer, CSF26 filter, together with the necessary auxiliary products required for efficient steam filtration. Further details are available upon request.

## Sample Specification

Steam filter shall be all 316 stainless steel, with cleanable sintered stainless steel element. Filter element to utilize double O-Ring seal, and be capable of removing 95% of all particles 2 microns and above. Body and element seals to be an FDA approved material. Vent and drain connection on all sizes.

## Installation & Maintenance

When used in steam service, it is recommended to remove the plastic drain plug and fit the CSF26 with a condensate drain trap and an air vent (Spirax Sarco MST 21). To prolong service life and ensure optimum filter efficiency, a strainer and separator should be installed upstream of the filter. This will ensure that entrained moisture and larger solid particles such as rust and pipescale are removed prior to filtration.

It is recommended that the element be removed for cleaning when the differential pressure across the filter reaches 10 - 15 psi. Cleaning can be achieved either chemically or ultrasonically. **Complete installation and maintenance instructions, which include element cleaning procedures, accompany the product.**

Inlet	6" - 150 lb ANSI RFSO Flange
Outlet	6" - 150 lb ANSI RFSO Flange
Drain	3/4" NPT 3000 lb Half Coupling
Vent	3/4" NPT 3000 lb Half Coupling
Pressure Tap	1/4" NPT 3000 lb Half Coupling

**Capacities** – The following table lists CSF26 capacities, in lb/h of saturated steam, based on a pipeline velocity of 100 ft/s and an approximate differential pressure across the filter of 1 psi.

Steam Supply Pressure psig	Filter Size
	6"
10	4050
20	5625
40	8900
60	12050
100	18100
150	25000

For liquid and gas applications, consult factory.

### Steam Filter Efficiency

The 2.8 micron absolute rated filter element will remove 100% of particles 2.8 micron particles and larger and 95% of 1 micron particles.

### Filter Stations

Also available from Spirax Sarco are a range of steam filter stations which conform to the requirements of the 3-A Accepted Practice Number 609-03. Each filter station includes a moisture separator with trap-set, strainer, CSF26 filter, together with the necessary auxiliary products required for efficient steam filtration. Further details are available upon request.

### Sample Specification

Steam filter shall be all 316 stainless steel, with cleanable sintered stainless steel element. Filter element to utilize double O-Ring seal, and be capable of removing 100% of all particles 2.8 microns and above. Body and element seals to be an FDA approved material.

### Installation & Maintenance

When used in steam service, it is recommended to remove the plastic drain plug and fit the CSF26 with a condensate drain trap and an air vent (Spirax Sarco MST 21). To prolong service life and ensure optimum filter efficiency, a strainer and separator should be installed upstream of the filter. This will ensure that entrained moisture and larger solid particles such as rust and pipescale are removed prior to filtration. It is recommended that the elements be removed for cleaning when the differential pressure across the filter reaches 15 - 20 psi. Cleaning can be achieved either chemically or ultrasonically. **Complete installation and maintenance instructions, which include element cleaning procedures, accompany the product.**

## CS10-1 Stainless Steel Clean Steam Separator

### Description

Even in the cleanest and best designed clean steam system entrained moisture can still occur, resulting in an unacceptably low dryness fraction, non-compliance of critical sterilization standards, damage to control valves/instrumentation and a generally low efficiency of the system.

The CS10-1 clean steam separator has been designed in full accordance with the latest edition of ASME BPE to overcome the issues of removing entrained moisture from clean and pure steam systems.

It has been designed with the feature of a removable baffle plate, allowing the unit to be fully inspected prior to installation and to ease periodic cleaning and de-rouging.

### Available types

#### Model CS10-1

**Internal** 20  $\mu$ -in Ra (0.5  $\mu$ m) maximum/SF5 as outlined in ASME BPE, with all welds ground and electropolished.

**External** 63  $\mu$ -in (1.6  $\mu$ m) Ra maximum, with a satin bead blast finish.

### Optional surface finish (CS10-1 only)

**Internal** Polish to 20  $\mu$ -in Ra (0.5  $\mu$ m) maximum + Electropolished.

### Standards

This product has been designed in accordance with the latest standard of the ASME BPE guide (2005 edition). It also complies with the requirements of the European Pressure Equipment Directive 97/23/EC. All elastomers used comply with FDA regulation CFR 21 paragraph 177 section 2600.

1/2", 3/4" and 1" sizes are available with USP class VI.

### Certification

This product is available with the following certification:

- EN 10204 3.1 material certifications.
- Certificate of conformities.
- Passivation certificates.
- Welding certificates.
- Internal surface finish certificate.

**Note:** All certification/inspection requirements must be stated at the time of order placement.

### Packaging

Packaging for this product is conducted in a clean environment, segregated from other non stainless steel products, and in accordance with ASME BPE for optimum protection and cleanliness; The inlet and outlet connections of the product are fitted with protective caps before being sealed in a plastic bag.

### Sizes and pipe connections

**Steam inlet and outlet pipe** 1/2", 3/4", 1", 1 1/2" and 2" Sanitary clamp ASME BPE (Tri-clamp®) Extended tube weld ends (ETO) ASME BPE.

**Drain** 1" ASME BPE (Tri-clamp®)

**Vent** 1/2" ASME BPE (Tri-clamp®)

**Note:** Other connections are available upon request.

### Materials

No. Part	Material		
1	Body	Fabricated stainless steel	ASTM A312 316L
			ASTM A240 316L
			ASTM A276 316L
2	Cover + Baffle	Fabricated stainless steel	ASTM A240 316L
			ASTM A276 316L
3	Seal	Viton	
4	Clamp	Stainless steel	AISI 316

### Pressure/temperature limits (ISO 6552)

**The product must not be used in this region.**

**Note:** For hygienic/sanitary clamp ends the maximum pressure / temperature may be restricted by the gasket or sanitary clamp used. Please consult Spirax Sarco.

Body design conditions	PN10
PMA Maximum allowable pressure	10 bar g @ 50°C (145 psig @ 122°F)
TMA Maximum allowable temperature	250°C (482°F)
Minimum allowable temperature	-10°C (14°F)
PMO Maximum operating pressure for saturated steam service	7.6 bar g (110 psi g)
TMO Maximum operating temperature	250°C @ 6.8 bar g (99 psig @ 482°F)
Minimum operating temperature	0°C (32°F)
Designed for a maximum cold hydraulic test pressure of 15 bar g (217 psig)	

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.

In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-P023-59-US 3.14

## Steam sizing example

- Plot point A** where the steam pressure and flowrate cross, e.g. 6 bar g / 500 kg/h: Draw a horizontal line.
- Select line size.** Any separator curve that is bisected by this line within the shaded area will operate at near 100% efficiency, e.g. 1½" (DN40), point B.
- Ascertain velocity.** Line velocity for any size can be determined by dropping a vertical line from this intersection. From point B this line crosses the velocity axis at 23 m/s.
- Pressure drop.** Where the line extended from point B crosses the line C - C, plot a horizontal line. Now drop a vertical line from point A. The point of intersection, D, is the pressure drop across the separator, i.e. about 0.035 bar.
- Separators should be selected on the basis of the best compromise between line size, velocity and pressure drop for each application.**

**Note:** For larger sizes and alternative, metals and pressure and temperatures that exceed these operating conditions please contact Spirax Sarco for a bespoke product. Independent research carried out by Liverpool University in England provided the experimental data from which the above graph was derived.

## Dimensions, weights and volume (approximate) mm, kg and litres (inches, lbs and gallons)

Steam inlet/outlet size	A	B	C	D	F (drain)	G (vent)	H	J	Weights	Volume

## Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P023-60) supplied with the product.

### Installation note

The CS10-1 is designed for installation in horizontal lines. Check arrow for correct orientation.

**Note:** The body and internals must be handled carefully to ensure that the surface finishes are not damaged.

### How to order

**Example:** 1 off 2" Spirax Sarco CS10-1 stainless steel clean steam separator with removable baffle plate. Sanitary clamp connections to ASME BPE, internal surface finish of 20 micro-inch complete with material certification to EN 10204 3.1.

### Spare parts

Please refer to the dimension drawing to the left.

#### Available spares

Seal	<b>3</b>
Clamp	<b>4</b>

#### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the size and type of separator.

**Example:** 1 x Seal for a Spirax Sarco 1½" CS10-1 stainless steel clean steam separator.

# spirax sarco

## CVS10 Sanitary Check Valve with Metal Seat

### Description

The CVS10 sanitary in-line spring assisted check valve is manufactured from 316L stainless steel and prevents reverse flow in fluid lines. The CVS10 with metal seat is designed for steam applications or other aggressive applications where a soft seat is not suitable, within the food, medical and pharmaceutical industries.

### Optional:

For water, process fluid and gas applications soft-seated versions with EPDM, Viton or FEP-Silicone seats are available - See Technical Information sheet TI-P029-10-US for further data.

### Available types and surface finish

**CVS10-1** has an internal surface finish of 20  $\mu$ -in (0.5 micron) Ra (within ASME BPE SF1), and external surface finish of 32  $\mu$ -in (0.8 micron) Ra and a metal seat.

**CVS10-2** has an electropolished internal surface finish of 15  $\mu$ -in 0.38 Ra (within ASME BPE SF4), and external surface finish of 32  $\mu$ -in (0.8 micron) Ra and a metal seat.

### Standards

- The CVS10 fully complies with the European Pressure Equipment Directive 97/23/EC.
- The CVS10 is designed in accordance with ASME-BPE.

### Standard shut-off

The standard shut-off of the CVS10 with metal seat conforms to EN 12266-1: 2003 Rate D.

### Certification:

- EN 10204 3.1 material certification.
- Typical surface finish certificates.

**Note:** All certification inspection requirements must be stated at time of order placement.

### Packaging

Packaging for this product is conducted in a clean environment segregated from other non stainless steel products, and in accordance with ASME BPE. Inlet and outlet connections are capped and the product is sealed in a plastic bag prior to boxing.

No.	Part	Material
1	Body	Stainless steel 316L
2	Valve head	Stainless steel 316L
3	Spring	Stainless steel 316

### Sizes and pipe connections

1/2", 3/4", 1", 1 1/2" and 2" to ASME BPE available as standard.

Sanitary clamp:

- ASME BPE clamp.

**Please note:** other connections, sizes and opening pressures are available on request.

1" valve shown

### Pressure/temperature limits

■ The product **must not** be used in this region.

Body design conditions	PN10
PMA Maximum allowable pressure	157 psig @ 392°F (10.8 barg @ 200°C)
TMA Maximum allowable temperature	428°F @ 152 psig (220°C @ 10.5 bar g)
Minimum allowable temperature	-425°F (-254°C)
PMO Maximum operating pressure for saturated steam service	145 psig (10 bar g)
TMO Maximum operating temperature	428°F @ 145 psig (220°C @ 10 bar g)
Minimum operating temperature	32°F (0°C)
Designed for a maximum cold hydraulic test pressure of 218 psig (15 barg)	

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.

In the interests of development and improvement of the product, we reserve the right to change the specification.

## Sanitary Pressure Gauge

### Description

The hygienic pressure gauge for clean steam applications is made of stainless steel and can be used in adverse service conditions where pulsation or vibration exists. It is 3A compliant and suitable for corrosive environments and gaseous or liquid media that will not obstruct the pressure system.

### Available dial size and ranges:

Dial Size	Range	Range	Range	Range
2-1/2"	0-30 psi	0-60 psi	0-100 psi	0-160 psi
4"	0-30 psi	0-60 psi	0-100 psi	30hg/60psi

Note: Other sizes and ranges are available through special request.

### Certification

All certification/inspection requirements must be stated at the time of order placement.

### Pipe connection 1 1/2" sanitary clamp connection.

Note: Other pipe connections are available through a special quote.

### Pressure/temperature limits

PMA	Maximum allowable pressure	Short time	1.3 x Full scale reading
		Steady	Full scale reading
		Fluctuating	0.9 x Full scale reading
TMA	Maximum allowable temperature	200°C	
	Minimum allowable temperature	-20°C	
PMO	Maximum operating pressure	Range 1	6 bar
		Range 2	10bar
TMO	Maximum operating temperature	184°C	

### Accuracy

Accuracy	4" Dial = 0.5% Full Scale (ANSI Grade 2A)
	2-1/2" Dial = 1.0% Full Scale (ANSI Grade 1A)

When the temperature of the pressure element rises above 68°F add the accuracy error and when it falls below 68°F subtract the accuracy error.

Note: These errors are computer generated and for guidance only.

### Installation note:

It is recommended that all gauges are fitted with suitable isolation valves to allow for safe maintenance/replacement. Fittings, clamps and gaskets for pipe end connections are not supplied.

### Maintenance note:

The only maintenance work necessary is regular cleaning of the polycarbonate window. Solvents should not be used to clean the window as it may impair clarity.

### Caution

Do not over-tighten the clamp as this may cause the gasket to spread/extrude.

### Disposal

The product is recyclable. Care must be taken to ensure disposal of oil is carried out in accordance with national and local regulations regarding disposal of waste oil.

### Spare parts

No spare parts are available for the hygienic pressure gauge.

### How to order

Example: 1 off Spirax Sarco 2 1/2" hygienic pressure gauge with a pressure range of 0 - 100 psi and having sanitary clamp connections.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.

In the interests of development and improvement of the product, we reserve the right to change the specification.

## Clean Steam Sampling Cart

### Description

The Clean Steam Sampling Cart is engineered and fabricated to improve safety, efficiency, and operability in the collection of clean steam samples for testing. The unit is specifically designed for taking critical quality samples for total organic carbon (TOC), conductivity and microbiological/endotoxin monitoring. The highest regard is given to maintaining the integrity of your quality samples.

The Clean Steam Sampling Cart is a complete and comprehensive package for pure or clean steam systems.

### Typical applications

Pure/clean steam sampling, point-of-use cooling in hot purified water systems.

### Principal features

- Cooling Heat Exchanger
- Sample Outlet Valve
- Cooling Water Pressure Gauge
- Cooling Water Isolation Valve
- Pressure Relief Valve
- Sanitary Pipe Supports
- Swivel Casters With Brakes
- Tri-Clamp Connections
- Cleanroom Compatible Construction

### Sizes, Pipe, and Connections

- All piping is 316L SS
- Steam side piping will be fully documented
- Cooling water supply, cooling water return, clean steam supply, sample outlet
- All 1/2" Tri-Clamp connections

### Limiting conditions

Steam  
PMO Maximum operating pressure 100 psig  
TMO Maximum operating temperature 347°F @ 100 psig

Water  
PMO Maximum operating pressure 145 psig  
TMO Maximum operating temperature 212°F

<sup>1</sup>Maximum operating pressure for sanitary fittings is determined by the sanitary flange clamp rating used for connections. Refer to manufacturer's literature for details.

### Materials

Cart	304 Stainless Steel, 1x1x11 gauge, #4 finish
Clean Steam Piping	316L Stainless Steel, SF4, 15Ra Ep
Cooling Water Piping	316L Stainless Steel
Casters	304 Stainless Steel with non-marking polyurethane wheels

Material certification documents provided.

High Purity

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-7-010-US 10.13

## Packaging

All packaging of the cart is conducted in a clean environment segregated from other non stainless steel manufacturing and is in accordance with ASME BPE.

## How to order

Time to produce the sample volume is based on the SSC20 heat transfer area. Actual sample delivery rates are dependent upon clean steam pressure, cooling water inlet temperature and available cooling water flow.

## Specification

The mobile steam sampling cart shall be of all-stainless steel, clean room-compatible construction, with sanitary, self-draining piping design. The steam condenser shall be a clean steam-compliant and shall be able to accommodate chilled water, cooling tower water or municipal water as a cooling source. The system shall include the following instrumentation and controls at minimum: a sample temperature gauge, a cooling water pressure gauge, a sample outlet valve, a cooling water isolation valve and a pressure relief valve. All wetted-surface pipeline components shall be manufactured from 316L stainless steel and provided with Tri-Clamp sanitary couplings. Service connections shall be ½" Tri-Clamp. Vertical clearance beneath the sample outlet valve shall be at least 6 in. A validatable documentation package shall be provided upon delivery, including drawings, material certification documents and weld certification documents.

## Weights (nominal)

Standard cart in pounds	110-125
-------------------------	---------

## Installation

Approach piping for both clean steam and cooling water should be evaluated by a qualified engineer and necessary modifications undertaken to minimize the potential for destructive and/or dangerous water hammer events during operation.

Cooling water pressure, including momentary spikes, should be controlled so as not to exceed the heat exchanger operational specification. Soft opening and closing control valves are recommended.

Correct condensate drainage within the clean steam line is important to protection of clean steam sample cooler cart as well as other steam system components to guard against potential water hammer damage.

## Safety and operation

**NOTE:** This cart is engineered to provide a safer way of obtaining clean steam samples efficiently. However, no steam sample collection device is completely fail-safe. The prudent manager will consider the capabilities of employees and evaluate potential risks and advisability of configuring the system with additional safety-related instrumentation and controls. Your Spirax Sarco representative is available to offer advice.

**WARNING:** To avoid the risk of scalding, it is essential that cooling water is flowing before opening the sample valve. Always close the sample inlet valve before turning off the cooling water.

## C - C Compact Clean Steam Generator

The M 600 compact clean steam generator is designed to provide clean steam suitable for treated water using plant steam as the heating medium.

The M 600 generator produces up to a maximum of 1275 lbs of clean steam at 45 psig depending on plant steam pressure and feed water temperature. The unit comes complete fully assembled tested and ready to produce clean steam once connected to the plant steam supply. The generator pressure vessel is designed and manufactured in accordance with ASME Section VIII. The generator pressure vessel is made of 316 stainless steel.

The unit is supplied as standard in a compact frame protected by a stainless steel enclosure. The standard features include dual 2" NPT steam supply and feedwater inlet. A piston actuated valve is fitted to the bottom of the generator vessel or timed to control the flow. The standard options are listed in the table below.

### Applications

The CSM-C 600 is suitable for a wide range of sterilization, humidification and process applications within the Healthcare, Institutional, Food and Beverage, Pharmaceutical and Electronics industries.

### Principal features

- Produces clean steam for sterilization, humidification and direct injection processes using plant steam and treated feed water.
- Fully assembled skid-mounted system (transportable).
- Pneumatic modulated steam and feed water control.
- All clean steam and feed water parts in 316 stainless steel.
- Produces clean steam in accordance with ASME Section VIII, Part 1 and 285 standards.
- Clean steam and feed water sample points with stainless steel fittings.
- Pressure controller with 5.7" orifice and 1/2" NPT connection.
- Manual control panel enclosure with optional components.

### Performance

Connection	Size	Material	Pressure

## Iron Liquid Drain Traps FA-30, FA-75, FA-150

The float-operated liquid drain trap discharges continuously in direct response to variations in liquid flow rate, assuring thorough drainage of the system.

Model	FA-30	FA-75	FA-150
Sizes	3/4", 1", 1-1/2", 2"		
Connections	NPT		
Construction	Cast Iron Body, Stainless Steel Internals		

### Typical Applications

Receiver and air line drainage, draining a liquid from its vapor phase

Liquid Drain Traps

### Limiting Operating Conditions

#### Max. Operating Pressure (PMO)

Up to 150 psig. The PMO depends on the model selected and the specific gravity of the liquid being drained. See TIS 7.318.

**Max. Operating Temperature**    **FA-30, 75**    450°F (232°C)  
    **FA-150**    200 °F (93°C)

### Pressure Shell Design Conditions

**PMA**                                    **FA-30,75:** 125 psig/0-450°F    9 barg/0-232°C  
 Max. allowable pressure    **FA-150:** 150 psig/0-200°F    10 barg/0-93°C

**TMA**                                    **FA-30,75:** 450°F/0-125 psig    232°C/0-9 barg  
 Max. allowable temperature **FA-150:** 200°F/0-150 psig    93°C/0-10 barg

# Iron Liquid Drain Traps FA-30, FA-75, FA-150

## Capacity

The discharge capacity depends on the differential pressure (inlet pressure minus outlet pressure) and the specific gravity of the liquid being drained. See TIS 7.318.

## Sample Specification

The liquid drain trap shall be of the float type with screwed NPT connections. Valve mechanism and float shall be stainless steel with hardened working surfaces, designed to retain a water seal at all times. A 1/2" NPT tapping shall be provided for a balance pipe. All internals are to be renewable and field serviceable.

## Installation

The trap must be fitted in a horizontal pipe line with direction of flow as indicated and so that the float mechanism is free to rise and fall in a vertical plane. Full-flow isolating valves should be placed to permit servicing. The high point of the body is provided with a 1/2" NPT tapping for a balance pipe, which is essential for satisfactory operation of this unit. The balance pipe must be connected with a continuous rise between the tapping provided on the body of the trap and the vessel being drained. The trap discharge should be piped to a safe place.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation of the trap from both supply and return line is required before any servicing is performed.

The trap should be disassembled periodically for inspection and cleaning of the valve head and seat.

Worn or damaged parts should be replaced using a complete repair kit.

**Complete installation and maintenance instructions are given in IMI 7.306 which accompanies the product.**

Liquid drain traps can be used to drain most liquids from most gases. However, some applications, particularly those involving hazardous or unusual fluids, may be subject to regulation or may otherwise require special consideration.

Spirax Sarco will endeavor to provide whatever data is necessary to assist in product selection.

## Spare Parts

Replacement Module Kit (1/2", 3/4", 1" only)- Consists of: Valve Mechanism (w/Float) attached to a Cover and supplied with a Cover Gasket, Nameplate and a set of Cover Bolts.

Gasket Kit (Set of 3 cover and mechanism gaskets)

# Ductile Iron Liquid Drain Trap CA14

## SAMPLE SPECIFICATION

The liquid drain trap shall be of the float type with screwed NPT connections (top inlet, side outlet.) Body material shall be Ductile (SG) Iron. Valve mechanism shall be stainless steel with viton valve head designed to retain a water seal at all times. All internals are to be renewable field servicable without disturbing the piping connections.

## INSTALLATION

The trap must be fitted in a horizontal plane, as shown, with the inlet at the top so that the float mechanism is free to rise and fall vertically. The discharge should be piped to a safe place.

## MAINTENANCE

This product can be maintained without disturbing the piping connections. Complete isolation of the trap from both supply and return line is required before any servicing is performed. The trap should be disassembled periodically for inspection and cleaning of the valve head and seat.

Worn or damaged parts should be replaced using a complete repair kit.

Complete the installation with the following parts:

Maintenance Kit	A, B (2 off), C, D, E, F, G, O
Seal it	C, O

Available spare parts are shown in heavy outline. Parts drawn in broken line are not supplied as spares.

Liquid Drain Traps

# spirax sarco

## Steel Liquid Drain Trap FA450

The float-operated liquid drain trap discharges continuously in direct response to variations in liquid flow rate, assuring thorough drainage of the system.

<b>Model</b>	<b>FA450</b>
<b>PMO</b>	465 psig (see below)
<b>Sizes</b>	3/4" to 2"
<b>Connections</b>	NPT
<b>Construction</b>	Carbon Steel Body Stainless Steel Internals
<b>Options</b>	ANSI 150, 300 or 600 flanges SW Connections to ANSI B16.11 1/2" Bottom Drain

**Note:** 1-1/2" and 2" valves are double-seated, and may not shut tight under no-load conditions. Normally, the liquid load will always be greater than the small residual leakage.

### Construction Materials

No.	Part	Material	
1	Body	Steel	ASTM A216 WCB
2	Cover Bolts	Steel	ASTM A 193 B7
	Cover Nuts	3/4" & 1" 7/16 - 14 UNC-2A 1-1/2" & 2" 5/8-11UNC-2A	ASTM A 194 2H
3	Cover Gasket	Stainless Steel Reinforced Exfoliated Graphite	
4	Cover	Steel	ASTM A216 WCB
5	Valve Seat (3/4" & 1")	Stainless Steel	ASTM A276 Type 420F
	Main Valve Assembly w/ erosion deflector (1-1/2" & 2")	Stainless Steel	AISI 431
6	Valve Seat Gasket (3/4" & 1")	Stainless Steel	ASTM A240 Type 301
	Main Valve Assy Gasket 1-1/2" & 2"	Stainless Steel Reinforced Exfoliated Graphite	
7	Pivot Frame Assy	Stainless Steel	AISI 18-8
	Set Screws (3/4" & 1")	10-24 Fillister Head	ANSI B 18.6.3
	Main Valve Assembly	Steel	
	Cap Screws (1-1/2")	1/4-20	ASTM 276 Type 304
8	Studs & Nuts (2")	5/16-18	ASTM 276 Type 431 & 304
	Ball Float & Lever	Stainless Steel	ASTM A240 Type 304
11	Support Frame	Stainless Steel	ASTM A240 Type 304
12	Pivot Frame	Stainless Steel	ASTM A240 Type 304
13	Erosion Deflector	Stainless Steel	ASTM A582 Type 303
19	Plug	Stainless Steel	
20	Plug Gasket	Stainless Steel	ASTM A240

### Typical Applications

Receiver and air line drainage, draining a liquid from its vapor phase

### Limiting Operating Conditions\*

**Max. Operating Pressure (PMO)** Up to 465 psig. The PMO depends on the model selected and the specific gravity of the liquid being drained. See TIS 7.318.

**Max. Operating Temperature** 750 °F (400°C)

### Pressure Shell Design Conditions\*

**PMA** 535 psig/650°F 37 barg/343°C  
Max. allowable pressure 505 psig/750°F 35 barg/400°C

**TMA** 750°F/0-505 psig 400°C/0-34 barg  
Max. allowable temperature

\* The limiting operating and design conditions for ANSI 150 flanged units will be limited by the flange rating

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-7-315-US 04.14

# Steel Liquid Drain Trap FA450

## Capacity

The discharge capacity depends on the differential pressure (inlet pressure minus outlet pressure) and the specific gravity of the liquid being drained. See TIS 7.318.

## Sample Specification

Liquid drain traps shall be of the mechanical ball float type having steel bodies, horizontal in-line connections, and stainless steel valve heads, seats and ball floats. Internals of the trap shall be completely servicable without disturbing the piping.

## Installation

The trap must be fitted in a horizontal pipe line with direction of flow as indicated and so that the float mechanism is free to rise and fall in a vertical plane. Full-flow isolating valves should be placed to permit servicing.

The high point of the body is provided with a 1/2" NPT tapping for a balance pipe, which is essential for satisfactory operation of this unit. The balance pipe must be connected with a continuous rise between the tapping provided on the body of the trap and the vessel being drained. The trap discharge should be piped to a safe place.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation from both supply and return line is required before any servicing is performed.

The trap should be disassembled periodically for inspection and cleaning of the valve head and seat.

Worn or damaged parts should be replaced using a complete valve mechanism kit.

**Complete installation and maintenance instructions are given in IMI 7.306, which accompanies the product.**

**Dimensions**  
(nominal) in inches and millimeters

Size	A	A1	B	C	D	E	F	G	H	Scr/SW	Flg

## Spare Parts

Valve Mechanism w/ Float (3/4" & 1")	it	A,B,C,D,E,F,G
Valve Mechanism (1-1/2" & 2")	it	A,B,D,P
Gasket Kit (3 sets of cover and Mechanism Gaskets)		B,T
Float Kit (1-1/2" & 2")		C

The erosion deflector is pressed into the body during manufacture and not available as a spare.

Liquid drain traps can be used to drain liquids from most gases. However, some applications, particularly those involving hazardous or unusual fluids, may be subject to regulation or may otherwise require special consideration.

Spirax Sarco will endeavor to provide whatever data is necessary to assist in product selection.

## Steel Liquid Drain Trap 3" and 4" FA450

The float-operated liquid drain trap discharges continuously in direct response to variations in liquid flow rate, assuring thorough drainage of the system.	Model	FA450	
	Sizes	3"	4"
	Connections	NPT, SW, Flanged	Flanged
	Construction	Carbon Steel Body Stainless Steel Internals	

### Typical Applications

Draining a liquid from a gas in large process applications.

### Standards

The product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC, and carries the CE mark when so required.

### Certification

This product is available with certification to EN 10204 3.1. Designed in accordance with ASME VIII Div 1. **Note:** All certification/inspection requirements must be stated at the time of order placement.

**Note:** The double seated valve may not shut tight under no-load conditions. Normally, the liquid load will always be greater than the small residual leakage.

### Construction Materials

No.	Part	Material	
1	Body	Cast Carbon Steel	ASTM A216 WCB
2	Cover	Cast Carbon Steel	ASTM A216 WCB
3	Cover Gasket	Graphite with SS insert	
4	Cover Bolts	Steel	ASTM A193 GR B7
5	Lockwashers	Steel	
6	Main Valve Assembly	Stainless Steel	AISI 300 & Hardened Head and Seat
	Valve Mech. Gasket	Graphite	
	Valve Mech. Screws	Stainless Steel	
7	Float	Stainless Steel	ASTM A240 Type 304
8	Cover Plug (3/4" NPT)	Steel	
	Drain Plug (3/4" NPT)	Steel	
9	Companion Flange	Forged Steel	
10	Flange Bolts	Steel	ASTM A193 GR B7

### Capacities

For liquids other than cold water, see TIS 7.318.

### Limiting Operating Conditions\*

**Max. Operating Pressure (PMO)** Up to 450 psig, depending on the specific gravity of the liquid being drained. See TIS 7.318.

**Max. Operating Temperature** 650°F (343°C) at 450 psig (31 barg)

750°F (400°C) at operating pressures below 375 psig (26 barg)

### Pressure Shell Design Conditions\*

**PMA** 450 psig/0-650°F 31 barg/0-343°C  
 Max. allowable pressure 425 psig/700°F 29 barg/371°C  
 375 psig/750°F 26 barg/400°C

**TMA** Max. allowable temperature 750°F/0-375 psig 400°C/0-26 barg

\* The limiting operating and design conditions for ANSI 150 flanged units will be limited by the flange rating.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-7-3151-US 2.14

# Steel Liquid Drain Trap 3" and 4" FA450

## Dimensions (nominal)

## Sample Specification

Liquid drain traps shall be of the mechanical ball float type having steel bodies with stainless steel internal parts. The piping connections shall be horizontal in-line, and the body shall incorporate mounting legs with drilled pads. The trap body shall be horizontally split and all internal parts shall be completely serviceable without disturbing the inlet and outlet piping.

## Installation

The trap should be located below and close to the equipment drain point. A pipeline strainer should be installed ahead of the trap, and full-flow isolating valves should be placed to permit servicing. The mounting legs should be bolted to a firm horizontal support. Access above the trap must be provided for servicing. The cover has a plugged 3/4" NPT balance pipe connection. The balance pipe must be connected with a continuous rise between the trap and the equipment being drained.

Complete installation instructions are given in IMI 7.3151.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation from both supply and return line is required before any servicing is performed. The trap should be disassembled periodically for inspection and cleaning of the valve mechanism.

Complete installation and maintenance instructions are given in IMI 7.3151, which accompanies the product.

Liquid drain traps can be used to drain most liquids from most gases. However, some applications, particularly those involving hazardous or unusual fluids, may be subject to regulation or may otherwise require special consideration.

Spirax Sarco will endeavor to provide whatever data is necessary to assist in product selection.

# Steel Liquid Drain Trap

## F-150V, F-300V

### Conversion Factors

for equivalent cold water capacity of light liquids

Specific gravity	.95-.99	.90-.94	.85-.89	.80-.84	.75-.79	.70-.74	.65-.69	.60-.64	.55-.59	.50-.54
Conversion Factor	1.03	1.06	1.09	1.12	1.16	1.20	1.24	1.29	1.35	1.42

### Draining Cold Water & Liquids of specific gravity 1.0

Obtain the required cold water capacity by multiplying the peak load by a safety factor of 1.5. Select the drain trap from the capacity table which satisfies the required cold water capacity and operates at the minimum pressure differential of the application.

### Sample Specification

The liquid drain trap shall be of the float type with screwed NPT connections. Valve mechanism shall be stainless steel with hardened working surfaces designed to retain a water seal at all times. A 1/4" NPT tapping shall be provided for a balance pipe. All internals are to be renewable and field serviceable.

### Draining Liquids of specific gravity 0.5 to 0.95

Determine the "Equivalent Cold Water Capacity" of the light liquid by multiplying its peak load (include a safety factor of 1.5) by the conversion factor given in the table above. If the maximum load is accurately known, the safety factor can be reduced or eliminated.

Refer next to Limiting Conditions table which gives the maximum operating pressure with various gravity liquids. For liquids between those listed, use the next lower specific gravity. Determine the maximum operating pressure equal to, or greater than, the inlet pressure of the application.

### Installation

The trap must be fitted in a vertical pipe line with direction of flow as indicated and so that the float mechanism is free to rise and fall in a vertical plane.

The cover is provided with a 1/4" tapping for a balance pipe, which is essential for satisfactory operation of this unit. The balance pipe must be connected with a continuous rise between the tapping provided on the trap and the vessel being drained. The trap discharge should be piped to a safe place.

### Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation of the trap from both supply and return line is required before any servicing is performed. The trap should be disassembled periodically for inspection and cleaning of the valve head and seat. Worn or damaged parts should be replaced using a complete repair kit.

**Complete installation and maintenance instructions are given in the IMI 7.306 which accompanies the product.**

Liquid drain traps can be used to drain most gases. However, some applications, particularly those involving hazardous or unusual fluids, may be subject to regulation or may otherwise require special consideration. Spirax Sarco will endeavor to provide whatever data is necessary to assist in product selection.

# Stainless Steel Liquid Drain Trap FA-150

## Conversion Factors

for equivalent cold water capacity of light liquids

<b>Specific gravity</b>	.95-.99	.90-.94	.85-.89	.80-.84	.75-.79	.70-.74	.65-.69	.60-.64	.55-.59
<b>Conversion Factor</b>	1.03	1.06	1.09	1.12	1.16	1.20	1.24	1.29	1.35

## Draining Cold Water & Liquids of specific gravity 1.0

Obtain the required cold water capacity by multiplying the peak load by a safety factor of 1.5. Select the drain trap from the capacity table which satisfies the required cold water capacity and operates at the minimum pressure differential of the application.

## Draining Liquids of specific gravity 0.55 to 0.95

Determine the "Equivalent Cold Water Capacity" of the light liquid by multiplying its peak load (include a safety factor of 1.5) by the conversion factor given in the table above. If the maximum load is accurately known, the safety factor can be reduced or eliminated.

Refer next to Limiting Conditions table which gives the maximum operating pressure with various gravity liquids. For liquids between those listed, use the next lower specific gravity. Ensure that the maximum operating pressure is equal to, or greater than, the inlet pressure of the application.

## Sample Specification

The liquid drain trap shall be of the float type with screwed NPT connections. Body shall be stainless steel, and valve mechanism shall be stainless steel with hardened working surfaces designed to retain a water seal at all times. An NPT tapping shall be provided for a balance pipe. All internals are to be renewable and field serviceable.

## Installation

The trap must be fitted in a vertical pipe line so that the float mechanism is free to rise and fall in a vertical plane.

The high point of the cover is provided with a 1/4" NPT tapping for a balance pipe, which is essential for satisfactory operation of this unit. The balance pipe must be connected with a continuous rise between the tapping provided on the cover of the trap and the vessel being drained. The trap discharge should be piped to a safe place.

## Maintenance

This product can be maintained without disturbing the inlet piping connections. Complete isolation of the trap from both supply and return line is required before any servicing is performed.

The trap should be disassembled periodically for inspection and cleaning of the valve head and seat.

Worn or damaged parts should be replaced using a complete repair kit. **Complete installation and maintenance instructions are given in IM-7-306-US which accompanies the product.**

Liquid drain traps can be used to drain most liquids from most gases. However, some applications, particularly those involving hazardous or unusual fluids, may be subject to regulation or may otherwise require special consideration.

Spirax Sarco will endeavor to provide whatever data is necessary to assist in product selection.

## Spare parts

The spare parts available are shown in heavy outline. Parts drawn in broken line are not supplied as spares.

### Available spares

Maintenance Kit	CAS14	3, 5, 6, 7 (2 off), 8, 9, 12, 14, 15
Seal Kit	CAS14S	3, 5, 6, 7 (2 off), 8, 9, 12, 14+16 (1" only), 15

### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the size and type of trap.

**Example:** 1 - Maintenance kit for a Spirax Sarco 1/2" CAS14 austenitic stainless steel liquid drain trap.

### Recommended tightening torques

Item	Part	or		FT./LBS
		mm		
2	Cover bolt	M10 x 30		15 - 18
5	Main valve seat	17 A/F		36 - 37
7	Main valve assembly screws	Pozidrive	M4 x 6	2 - 2.2
10	Blanking plug	17 A/F		36 - 37

Liquid Drain Traps

# spirax sarco

## Stainless Steel Liquid Drain Trap CA46S

The float-operated liquid drain trap discharges continuously in direct response to variations in liquid flow rate, assuring thorough drainage of the system.

Model	CA46S-4.5	CA46S-10	CA46S-14	CA46S-21
Sizes	1/2", 3/4", and 1"			
Connections	ANSI 150 and ANSI 300			
Sizes	1 1/2", 2"	N/A	N/A	1 1/2", 2"
Connections	ANSI 150	N/A	N/A	ANSI 300
Construction	316 Stainless Steel Body, Stainless Steel Internals			

**Note:** 1-1/2" and 2" CAS46 drain trap are double-seated, and may not shut tight under no-load or light load condition. Normally, the liquid load will always be greater than the residual leakage.

### Construction Materials

No.	Part	Material	
1	Body	Stainless Steel	AISI 316
2	Cover Bolts 1/2", 3/4", 1" 1-1/2", 2"	Stainless Steel	Class A2 Gr80
		M10 x 60 mm	
		M16 x 85 mm	
3	Cover Gasket	Stainless Steel	BS 1449 304 S16
4	Cover Main Valve Assembly w/ Erosion Deflector 1-1/2", 2"	Stainless Steel	AISI 316
		Stainless Steel	BS 970 431 S29
		Stainless Steel	BS 3146 Pt2 type ANC2 BS 970 416 S37
6	Valve Seat Gasket 1/2", 3/4", 1" Main Valve Assembly Gasket 1-1/2", 2"	Stainless Steel	BS 1449 304 S11
		Stainless Steel	AISI 316
		Stainless Steel	
7	Pivot Frame Assembly Set Screws 1/2", 3/4", 1" Main Valve Assembly Bolts 1-1/2" Studs & Nuts 2"	Stainless Steel	
		M5 x 20 mm	BS 4183 18/8
		Stainless Steel	
		M6 x 20 mm	BS 970 304 S15
8	Ball Float & Lever	Stainless Steel	BS 1449 304 S16
		Stainless Steel	BS 6105 A4.80
11	Support Frame	Stainless Steel	BS 1449 304 S16
12	Pivot Frame	Stainless Steel	BS 1449 304 S16

### Limiting Operating Conditions

**Max. Operating Pressure (PMO)** Up to 304 psig (21 barg)  
The PMO depends on the model selected and the specific gravity of the liquid being drained. See TIS 7.318.

**Max. Operating Temperature** 752°F (400°C)

### Pressure Shell Design Conditions

**PMA** 580 psig/up to 121°F 40 barg/up to 49°C  
Max. allowable pressure 398 psig/448°F 27 barg/231°C  
304 psig/752°F 21 barg/400°C

**TMA** 752°F/0-304 psig 400°C/0-21 barg  
Max. allowable temperature

### Typical Applications

Process applications requiring an austenitic stainless steel liquid drain trap.

# Stainless Steel Liquid Drain Trap CA46S

Size/DN	Dimensions (nominal) in inches and millimeters					Weight
	A	B	C	D	E	
1/2" 15	5.8 150	3.2 80	3.2 80	8.4 215	4.7 120	23.8 lb 10.8 kg
3/4" 20	5.8 150	3.2 80	3.2 80	8.8 225	4.7 120	23.8 lb 10.8 kg
1" 25	6.2 160	4.5 115	3.4 85	10.8 276	6.7 170	33 lb 15 kg
1-1/2" 40	9.0 230	4.8 130	4.5 115	12.7 326	7.9 200	72.8 lb 33 kg
2" 50	9.0 230	5.5 141	4.8 123	12.9 332	7.9 200	94.8 lb 43 kg

## Capacity

The discharge capacity depends on the differential pressure (inlet pressure minus outlet pressure) and the specific gravity of the liquid being drained. See TIS 7.318.

## Sample Specification

Steam traps shall be of the mechanical ball float type having stainless steel bodies, horizontal line connections, and all stainless steel internals. A 1/2" NPT tapping shall be provided for a balance pipe. All internals are to be renewable and field serviceable.

## Installation

The trap must be fitted in a horizontal pipe line with direction of flow as indicated and so that the float mechanism is free to rise and fall in a vertical plane. Full-flow isolating valves should be placed to permit servicing. The high point of the body is provided with a 1/2" NPT tapping for a balance pipe, which is essential for satisfactory operation of this unit. The balance pipe must be connected with a continuous rise between the tapping provided on the body of the trap and the vessel being drained. The trap discharge should be piped to a safe place.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation of the trap from both supply and return line is required before any servicing is performed. The trap should be disassembled periodically for inspection and cleaning of the valve head and seat. Worn or damaged parts should be replaced using a complete repair kit.

**Complete installation and maintenance instructions are given in IM-7-306 which accompanies the product.**

Liquid drain traps can be used to drain most liquids from most gases. However, some applications, particularly those involving hazardous or unusual fluids, may be subject to regulation or may otherwise require special consideration. Spirax Sarco will endeavor to provide whatever data is necessary to assist in product selection.

## Spare Parts

Main Valve Assembly w/ Float	A,B,C,D,E,F,G
Main Valve Assembly w/ Erosion Deflector (1-1/2", 2")	A,B,D
Ball Float (1-1/2", 2")	C
Three complete sets of Gaskets (Pkt of 3 sets)	B,T

## Thermo-Dynamic® Liquid Drain Trap TDA52

The Thermo-Dynamic® liquid trap cycles periodically, discharging liquid as quickly as it accumulates, so as to prevent harmful back-up.

<b>Model</b>	<b>TDA52</b>
<b>PMO</b>	250 psig
<b>Sizes</b>	1/2"
<b>Connections</b>	NPT
<b>Construction</b>	stainless steel

### Typical Applications

Receiver and air line drainage,  
gas line drainage

### Limiting Operating Conditions

• **Operating Pressure (P)** 250 psig (17 barg)

• **Operating Temperature** 800°F (427°C)  
Minimum pressure for satisfactory operation is 50 psi (3.5 bar). Maximum back pressure should not exceed 80% of the inlet pressure under any conditions of operation, otherwise the trap may not shut.

### Pressure Shell Design Conditions

**PA** 600 psig/0-800°F 42 barg/0-427°C  
Max. allowable pressure

**TA** 800°F/0-600 psig 427°C/0-42 barg  
Max. allowable temperature

### Construction Materials

No.	Part	Material	
1	Body	Stainless Steel	AISI 420F
2	Cap	Stainless Steel	AISI 416
3	Disc	Stainless Steel	AISI 420

**Weight**  
.9 lb  
0.41 kg

### Capacities

Pounds of water per hour continuous discharge to atmosphere

Inlet Pressure		1/2" TDA52
psig	bar	
50	3.5	1140
75	5.2	1400
100	6.9	1650
150	10.3	2050

250	17.2	2800

For kg/hr, multiply lb/hr by .454

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-7-314-US 11.00

# Thermo-Dynamic® Liquid Drain Trap TDA52

## Sample Specification

Drain trap shall be all stainless steel Thermo-Dynamic® type with connections on a common center line. Integral seat design with hardened disc and seating surfaces, Spirax Sarco type TDA52 for all pressures from 50 psig 250 psig.

## Installation

The trap should be installed in a vertical position (discharging downward) as close as possible to the equipment being drained. The discharge should be piped to a safe place.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation of the trap from both supply and return line is required before any servicing is performed.

The trap should be disassembled periodically for inspection and cleaning of the seat and disc.

Worn or damaged parts should be replaced using a complete repair kit.

## ADV Automatic Drain Valve

### Description

The Spirax Sarco Automatic Drain Valve (ADV) has been designed to remove condensate from low points in a compressed air system where automatic drainage is required. The mentioned condensate is a mixture of water, petroleum or synthetic based oil, system particulates and dirt.

### Principle Features

- Adjustable "on" and "off" cycle times
- Low power consumption
- Bright LED lights indicating operational status.
- Cycle test button
- Brass body with FKM elastimers for both petroleum and synthetic based oils.
- Simple reliable construction.
- Easy serviceability with Strainer Ball Valve.

### Applications

The ADV can be installed at any low point in a compressed air system where condensate forms or is collected. Applications include: after coolers, separators, receivers, compressor accumulators, large filter units, drain legs, etc.

### Sizes and pipe connection

1/2" NPT inlet at strainer ball valve  
1/4", 3/8" and 1/2" NPT outlet from valve body

### Technical Data

Operating temperature range	Ambient temperature:	14°F (-10°C) to 122°F (50°C)
	Media temperature:	14°F (-10°C) to 266°F (130°C)
Pressure rating:	300 psig	
Voltage/ Power:	120V AC/30VA inrush, 15VA holding current	
	240V AC/30VA inrush, 15VA holding current	
Timer adjustment:	ON time:	0.5 to 10 seconds.
	OFF time:	0.5 to 45 minutes.
Electrical connection:	DIN 43650 — ISO4400 / 6952	
Coil insulation:	class F (155°C).	
Environmental protection:	IP65.	
Agency approvals:	c UR us, CE	

### Product complies with:

EN50081-1: 1995EMC Generic Emissions Standards - Residential, commercial and light industry.

EN61010-1/A2: 1995 Safety requirements for electrical equipment, for measurement, control and laboratory use.

**Note:** This product may be affected by electro-magnetic interference in an industrial environment.

The Spirax Sarco ADV can be used with compressed air, synthetic or petroleum based oils, water and some non-corrosive gasses.

# ADV Automatic Drain Valve

## ADV25, 38 & 50 Series (Heavy Duty)

These ADV lines are of heavy duty construction and are designed to allow high flow for quick and efficient dumping of condensate. They are available in 1/4", 3/8" and 1/2" NPT pipe sizes. Construction includes brass bodies stainless steel internals and FKM seals.

### Component parts

Part	Material
Coil	Thermoplastic
Timer	ABS
Valve body	Brass
Seals	FKM (not shown)
Powercord	ABS and PVC
Strainer Ball Valve	Brass and Stainles Steel

### Dimensions/Weight (approx.) in. / lbs.

A	B	C	D	E	Wgt.
2.92	4.13	1.74	2.13	0.61	1.3

### Cv values (approximate)

Valve size	ADV25 ADV26 1/4"	ADV38 ADV39 3/8"	ADV50 ADV51 1/2"
Cv	1.5	1.7	1.8
Discharge-gallons (5 sec, at 90 psig)	1.2	1.3	1.4

### Product Number Information

Listed below are the variations for the **Heavy Duty** 1/4", 3/8" and 1/2" ADV sizes.

<b>ADV25</b> 1/4"	120V AC	<b>ADV38</b> 3/8"	120V AC	<b>ADV50</b> 1/2"	120V AC
<b>ADV26</b> 1/4"	240V AC	<b>ADV39</b> 3/8"	240V AC	<b>ADV51</b> 1/2"	240V AC

For a system with 1/2" NPT piping, 120V ac voltage available you would select (1) **ADV50** Automatic Drain Valve (ADV)

### Spare parts

The spare parts are available for only those components listed below.

**Seal Kit:** A replacement diaphragm assembly (D) is available for all the above sizes. Request "Diaphragm Assembly" for the ADV valve in your system.

Ex.: Diaphragm Assembly for the ADV38.

Component parts available:

- Coil (B) specify voltage
- Timer (A)
- Powercord (C)

Request the specific "component" for the ADV valve in your system.

EX.: 120V Coil for the ADV51.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

Liquid Drain Traps

# ADV Automatic Drain Valve

## ADV10 Series (Standard Duty)

The ADV line is of standard construction and designed to allow adequate flow from smaller systems or those producing lesser condensate. This line is available only in the 1/4" NPT pipe size. Construction includes brass body, stainless steel internals and FKM seals.

### Component parts

Part	Material
Coil	Thermoplastic
Timer	ABS
Valve body	Brass
Seals	FKM
Powercord	ABS and PVC

### Cv values (approximate)

Valve size	1/4"
Cv	0.1
Discharge-gallons (5 sec, at 90 psig)	0.08

### Product Number Information

Listed below are the variations for the 1/4" Standard Duty ADV's

ADV10	1/4"	120V AC
ADV11	1/4"	240V AC

For system with 1/4" NPT piping, 120V AC voltage available with little condensate yield you would select (1) **ADV10** Automatic Drain Valve.

### Spare parts

The spare parts are available for only those components listed below.

**Seal kit:** None, replace valve

**Component parts available:**

- Coil (B) specify voltage,
- Timer (A)
- Powercord (C)
- Valve (D)

Request the specific "component" for the ADV valve in your system.  
Ex.: 120V Coil for the ADV 10.

### Dimensions/Weight (approx.) in. / lbs.

A	B	C	D	E	Wgt.
2.92	3.55	1.74	1.50	0.61	0.85

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-P509-06-US 6.14

# ADV Automatic Drain Valve

## Strainer Ball Valves

The Strainer Ball Valve is a very important part of your condensate drain system, because it allows the isolation of the ADV from the pressurized compressor tank as well as containing a 30 mesh stainless steel screen to collect debris that has been produced upstream. The major benefit is that it allows servicing of the ADV without removal and/or depressurizing the system. Also, the use of this device greatly

improves the life of the ADV by not allowing the system debris to enter the solenoid valve, which likely will cause damage to the moving parts and/or the main seal. It is strongly recommended that the Strainer Ball Valve be used in all ADV applications. Failure to use this device could void warranties associated with the ADV product.

**Note: All Strainer Ball Valves are packed with the ADV but detached to allow ease of assembly.**

## Product Number Information

Listed below are the variations for the 1/4", 3/8" and 1/2" sizes.

**360/01** 1/2" NPT IN x 1/4" NPT OUT  
**360/02** 1/2" NPT IN x 3/8" NPT OUT  
**360/03** 1/2" NPT IN x 1/2" NPT OUT

## Spare parts

**Screen:** A stainless steel, 30 mesh screen is available in one size (package of three) for all ADV sizes. Request the "Strainer Ball Valve filter screen" for the ADV valve in your system.

Ex.: Strainer Ball Valve "filter screen" pack for the ADV25361.

## Ordering Your Automatic Drain Valve

**Note: All ADV packages will include the appropriate strainer ball valve.**

When ordering, know the pipe connection size, available voltage and the amount of condensate that is to be drained. Also, the size of the compressor tank should be considered, as in the volume that is contained within. Listed below are the variations for the Standard 1/4" & Heavy Duty 1/4", 3/8" and 1/2" ADV sizes.

Size	ADV	SBV	Order no.	Description
1/4"	ADV10 + 360/01		<b>ADV10361</b>	1/4" standard flow, 120V AC ADV with Strainer Ball Valve.
	ADV11 + 360/01		<b>ADV11361</b>	1/4" standard flow, 240V AC ADV with Strainer Ball Valve.
1/4"	ADV25 + 360/01		<b>ADV25361</b>	1/4" high flow, 120V AC ADV with Strainer Ball Valve.
	ADV26 + 360/01		<b>ADV26361</b>	1/4" high flow, 240V AC ADV with Strainer Ball Valve.
3/8"	ADV38 + 360/02		<b>ADV38362</b>	3/8" high flow, 120V AC ADV with Strainer Ball Valve.
	ADV39 + 360/02		<b>ADV39362</b>	3/8" high flow, 240V AC ADV with Strainer Ball Valve.
1/2"	ADV50 + 360/03		<b>ADV50363</b>	1/2" high flow, 120V AC ADV with Strainer Ball Valve.
	ADV51 + 360/03		<b>ADV51363</b>	1/2" high flow, 240V AC ADV with Strainer Ball Valve.

Liquid Drain  
Traps

## Liquid Drain Traps Selection and Sizing

The discharge rate depends on the differential pressure across the trap (that is, the pressure at the trap inlet minus the pressure at the outlet). The capacity charts show the maximum cold water discharge rate versus the differential pressure. **Note:** Although the differential pressure is used for sizing, the trap body must be designed for the full maximum system pressure.

### Operation Against Return Line Back-Pressure

If the pressure in the return line (the "back-pressure") is above atmospheric at all times, the maximum operating pressure (PMO) of the trap is increased by the amount of the back-pressure. (But the increased PMO must never be higher than the PMA — the maximum allowable pressure.)

### Example:

If the nameplate PMO is 100 psig, and the back-pressure is always at least 25 psig, the drain trap may be used at a working pressure of up to 125 psig, provided that the nameplate PMA is at least 125 psig at the operating temperature. The excess pressure will not hold the valve closed because the differential pressure is not greater than the nameplate PMO.

### Safety Factors

Both the amount of liquid to be discharged and the differential pressure may fluctuate. To ensure continuous drainage during periods of high load and/or low pressure, the liquid drain trap should be selected to handle the estimated load times a safety factor of 1.5 at the lowest expected differential pressure. If the capacity requirements or operating conditions cannot be predicted accurately, the safety factor should be increased accordingly. If the maximum peak load and minimum differential pressure are accurately known, the safety factor may be reduced or eliminated.

### Liquids other than cold water

For liquids higher than cold water (that is, liquids with a specific gravity less than 1.0), both the discharge capacity and the maximum operating pressure will be reduced. The required capacity of the light liquid (including the safety factor) must be multiplied by the appropriate conversion factor from figure 1. The resulting equivalent cold water capacity is used to select a trap using the cold water capacity charts. Table 1 must be consulted to ensure that the reduced PMO of the selected trap is higher than the expected maximum system pressure. If there is a back-pressure in the return line, the PMO of the trap may be increased (see above).

### Flashing Liquids

The capacity charts are based on single-phase (liquid only) flow. If the pressure/temperature conditions upstream and downstream of the trap are such that a portion of the liquid will re-evaporate, or "flash" as it passes through the valve, the resulting two-phase (liquid and gas) flow will reduce the capacity of the trap. If two-phase flow is expected, the safety factor should be increased by 1-1/2 to 2 times.

**Table 1: Maximum Operating Pressure with Light Liquids**

Model(s)*	Size(s) s.g.	Maximum Operating Pressure, psig											
		1.00	.99 to .95	.94 to .90	.89 to .85	.84 to .80	.79 to .75	.74 to .70	.69 to .65	.64 to .60	.59 to .55	.54 to .50

## Manual Ball Valve 1/4" to 2 1/2"

### (Medium Pressure Applications)

#### Description

The M10S three-piece body ball valve has been designed for use as an isolating valve, not a control valve, and can be serviced without removal from the pipeline (screwed and welded versions only). It can be used with the majority of industrial fluids for services ranging from vacuum to the higher temperatures and pressures.

#### Available types

**M10S2** Zinc plated carbon steel body, PDR 0.8 seats.

**M10S4** Complete stainless steel, PDR 0.8 seats.

**Note:** The nomenclature will be followed with either **FB** (full bore) or **RB** (reduced bore).

#### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the **CE** mark when so required.

#### Certification

This product is available with certification to EN 10204 3.1.

**Note:** All certification / inspection requirements must be stated at the time of order placement.

#### Sizes and pipe connections

Full bore	Flanged 1/2" to 2"		
1/4", 3/8", 1/2", 3/4", 1", 1 1/4", 1 1/2" and 2"	ASME	Class	150,
<b>Screwed and welded</b> NPT, BW, SW	ASME	Class	300,
<b>Reduced bore</b>	Flanged 1/2" to 2 1/2"		
1/4", 3/8", 1/2", 3/4", 1", 1 1/4", 1 1/2", 2" and 2 1/2"	ASME	Class	150,
<b>Screwed and welded</b> NPT, BW, SW	ASME	Class	300,

#### Technical data

Flow characteristic	Modified linear
Port	Full and reduced port versions
Leakage test procedure to ISO 5208 (Rate A)	
Antistatic device	Complies with ISO 7121

#### Pressure/temperature limits

The product **must not** be used in this region.

- A - B** Screwed, SW and BW 1/4" - 1 1/2" FB, RB and 2" RB.
- A - C** Screwed, SW and BW 2" FB and 2 1/2" RB only.
- A - D** Flanged ASME 300.
- A - F** Flanged ASME 150.

**Note 1:** On the 2" FB and 2 1/2" RB a PTFE gasket is fitted between the body and cap.

**Note 2:** The flange standard may restrict the maximum operating pressure. Please check with Spirax Sarco.

#### Limiting Conditions

Body design conditions*		
PMA	Maximum allowable pressure	1450 psig @ 140°F
TMA	Maximum allowable temperature	500°F @ 0 psig
Minimum allowable temperature		-20°F
PMO	Maximum operating pressure for saturated steam service	254 psig
TMO	Maximum operating temperature	500°F @ 0 psig
Minimum operating temperature		-20°F
<b>Note:</b> For lower operating temperatures consult Spirax Sarco		
ΔPMX	Maximum differential pressure is limited to the PMO	
Designed for a maximum cold hydraulic test pressure of 2175 psig		
<b>*Note:</b> Do not exceed end connection design conditions.		

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

**Please note:**  
Screwed, butt weld and socket weld M10V ball valves have bolts and nuts.  
Flanged M10V ball valves have studs and nuts.

### C<sub>v</sub> values

Size	1/4"	3/8"	1/2"	3/4"	1"	1 1/4"	1 1/2"	2"	2 1/2"
Reduced bore	3	8	7	12	31	57	81	119	194
Full bore	3	8	20	42	67	102	176	240	-

### Operating torque (ft / lbf)

Size	1/4"	3/8"	1/2"	3/4"	1"	1 1/4"	1 1/2"	2"	2 1/2"
Reduced bore	1.5	1.5	1.5	3	10	15.5	23	29.5	33.5
Full bore	1.5	1.5	3	10	15.5	23	29.5	33	-

The indicated torque values are for valves frequently operated, that are submitted to a maximum differential pressure of 1500 psig. Valves that are subject to long static periods, may require greater break-out torque.

### Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions, IM-P133-16.

### How to order example:

1 off Spirax Sarco 1/2" screwed NPT M10S2FB ball valve.

### Optional extras:

- Self-venting ball.
- Extended stems 2" (50 mm) and 4" (100 mm) to allow full insulation.
- Lockable handle.
- Oval handle for confined spaces. Ideal for trap modules.

### Spare parts

The spare parts available are shown in solid outline. Parts drawn in broken line are not supplied as spares.

### Available spares

Seat and stem seal set	<b>5, 6</b>
------------------------	-------------

### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the size and type of ball valve.

**Example:** 1 - Seat and stem seal set for a 1/2" M10S2FB ball valve.

# spirax sarco

## M10V

### Manual Ball Valve 1/4" to 2-1/2" (Low Pressure Applications)

#### Description

The M10V three-piece body ball valve has been designed for use as an isolating valve, not a control valve, and can be serviced without removal from the pipeline (screwed and welded versions only). It can be used with the majority of industrial fluids.

#### Available types

**M10V2** Zinc plated carbon steel body, PTFE seats.

**M10V4** Complete stainless steel, PTFE seats.

**Note:** The nomenclature will be followed with either **FB** (full bore) or **RB** (reduced bore).

#### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the **CE** mark when so required.

#### Certification

This product is available with certification to EN 10204 3.1.

**Note:** All certification/inspection requirements must be stated at the time of order placement.

#### Sizes and pipe connections

Full bore	Flanged 1/2" to 2"		
1/4", 3/8", 1/2", 3/4", 1", 1 1/4", 1 1/2" and 2"	ASME Class 150, ASME Class 300,		
<b>Screwed and welded</b> API/NPT, BW, SW			
Reduced bore	Flanged 1/2" to 2 1/2"		
1/4", 3/8", 1/2", 3/4", 1", 1 1/4", 1 1/2", 2" and 2 1/2"	ASME Class 150, ASME Class 300,		
<b>Screwed and welded</b> API/NPT, BW, SW			

#### Technical data

Flow characteristic	Modified linear
Port	Full and reduced port versions
Leakage test procedure to ISO 5208 (Rate A)	
Antistatic device	Complies with ISO 7121

#### Pressure / temperature limits

The product **must not** be used in this region.

- A - B** Screwed, SW and BW 1/4" - 1 1/2" FB, RB and 2" RB.
- A - C** Screwed, SW and BW 2" FB and 2 1/2" RB only.
- A - D** Flanged ASME 300.
- A - F** Flanged ASME 150.

**Note 1:** On the 2" FB and 2 1/2" RB a PTFE gasket is fitted between the body and cap.

**Note 2:** The flange standard may restrict the maximum operating pressure. Please check with Spirax Sarco.

#### Body design conditions\*

PMA	Maximum allowable pressure	1015 psig @ 104°F
TMA	Maximum allowable temperature	446°F @ 0 psig
Minimum allowable temperature		-20°F
PMO	Maximum operating pressure for saturated steam service	145 psig @ 363°F
TMO	Maximum operating temperature	449°F @ 0 psig
Minimum operating temperature		-20°F
<b>Note:</b> For lower operating temperatures consult Spirax Sarco		
ΔPMX Maximum differential pressure is limited to the PMO		
Designed for a maximum cold hydraulic test pressure of 1523 psig		

\*Note: Do not exceed end connection design condition

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-P133-08-US 4.14

**Please note:**  
 Screwed, butt weld and socket weld M10V ball valves have bolts and nuts.  
 Flanged M10V ball valves have studs and nuts.

### C<sub>v</sub> values

Size	1/4"	3/8"	1/2"	3/4"	1"	1 1/4"	1 1/2"	2"	2 1/2"
Reduced bore	2.9	2.9	7	12	32	57	82	121	197
Full bore	2.9	8.0	20	42	68	104	179	240	-

### Operating torque (ft/lbf)

Size	1/4"	3/8"	1/2"	3/4"	1"	1 1/4"	1 1/2"	2"	2 1/2"
Reduced bore	1.5	1.5	7.5	3	10	15.5	23	29.5	33.5
Full bore	1.5	1.5	3	10	15.5	23	29.5	33.5	-

The indicated torque values are for valves frequently operated, that are submitted to a maximum differential pressure of 62 bar. Valves that are subject to long static periods, may require greater break-out torque.

### Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions, IM-P133-15.

### How to order example:

1 off Spirax Sarco 1/2" screwed NPT M10V2FB ball valve.

### Optional extras:

- Self-venting ball.
- Extended stems 2" (50 mm) and 4" (100 mm) to allow full insulation.
- Lockable handle.
- Oval handle for confined spaces. Ideal for trap modules.

### Spare parts

The spare parts available are shown in solid outline. Parts drawn in broken line are not supplied as spares.

### Available spares

Seat and stem seal set	<b>5, 6</b>
------------------------	-------------

### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the size and type of ball valve.

**Example:** 1 - Seat and stem seal set for a 1/2" M10V2FB ball valve.

# M10Si ISO Automation Ball Valve

## 1/4" to 2-1/2"

### (Medium Pressure Applications)

#### Description

The M10Si ISO Automation three piece body ball valve has ISO mounting as standard. It is designed for use as an automated isolating valve, not a control valve, on applications that use steam and other industrial fluids for services ranging from vacuum to the higher temperatures and pressures.

The M10Si ISO Automation ball valve is specifically designed for pneumatic or electric actuation and not manual operation and can be serviced without removing the valve from the pipeline (screwed and welded versions only).

#### ISO mounting

The integral ISO body mounting allows the valve to be automated without losing seal integrity, as the body does not require disassembly. Manual to remote control may therefore be easily accomplished by the ISO range of Spirax Sarco ball valves.

#### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the mark when so required.

#### Certification

This product is available with certification to EN 10204 3.1.

**Note:** All certification / inspection requirements must be stated at the time of order placement.

#### Available types

<b>M10Si2 ISO Automation</b>	Zinc plated carbon steel body, PDR 0.8 seats.
<b>M10Si4 ISO Automation</b>	Complete stainless steel, PDR 0.8 seats.

**Note:** The nomenclature will be followed with either **FB** (full bore) or **RB** (reduced bore).

#### Options

- Self-venting ball.
- Operation by pneumatic actuator URPA series.

#### Technical data

Flow characteristic	Modified linear
Port	Full and reduced bore versions
Leakage	Test procedure to ISO 5208 (rate A)
Antistatic	Complies with ISO 7121 and BS 5351

#### Sizes and pipe connections

1/4", 3/8", 1/2", 3/4", 1", 1-1/4", 1-1/2", 2", (2-1/2" only available with reduced bore). Screwed NPT, BW, SW full bore and reduced bore. The 1/4" to 2" (2 1/2" only available with reduced bore) flanged ASME 150 and ASME 300 full bore and reduced bore.

#### Pressure / temperature limits

The product must not be used in this region.

**A - B** 2" FB and 2-1/2" RB only

**A - C** 1/4" - 1-1/2" FB, RB and 2" RB

**Note:** The flange standard may restrict the maximum operating pressure. Please check with Spirax Sarco.

PMA Maximum allowable pressure	1450 psig @ 140°F
TMA Maximum allowable temperature	500°F @ 0 psig
Minimum allowable temperature	-21°F
PMO Maximum operating pressure for saturated steam service	254 psig
TMO Maximum operating temperature	500°F (260°C) @ 0 psig
Minimum operating temperature	-21°F

**Note:** For lower operating temperatures consult Spirax Sarco

$\Delta$ PMX Maximum differential pressure is limited to the PMO

Designed for a maximum cold hydraulic test pressure of 2175 psig

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-P133-70-US 12.14

## M10HPi ISO Ball Valve

1/4" to 2 1/2"

(High Pressure Applications) \*Not suitable for steam

### Description

The M10HPi ISO three-piece body ball valve has a lockable handle and ISO mounting as standard. It features a special floating ball, which has received a surface hardening and a blow-out proof stem. This particular ball valve has been specially designed for manual isolation of applications using high-pressure gas. The M10HTi ISO has been designed for use as an isolating valve, not a control valve, and can be serviced without removal from the pipeline.

### ISO mounting

The integral ISO body mounting allows the valve to be automated without losing seal integrity, as the body does not require disassembly. Manual to remote control may therefore be easily accomplished by the ISO range of Spirax Sarco ball valves.

### Available types

**M10HPi2 ISO** Zinc plated carbon steel body and caps.

**M10HPi3 ISO** Stainless steel body and caps.

**Note:** The nomenclature will be followed with either **FB** (full bore) or **RB** (reduced bore).

### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the **CE** mark when so required.

### Certification

This product is available with certification to EN 10204 3.1. **Note:** All certification / inspection requirements must be stated at the time of order placement.

### Options

- Self-venting ball.
  - Extended stem 4" (100 mm) to allow full insulation.\*
  - Oval handle for confined spaces. Ideal for trap modules.\*
- \*manual operation only

### Technical data

Flow characteristic	Modified linear
Port	Full and reduced bore versions
Leakage test procedure to ISO 5208 (Rate A)/EN 12266-1 (Rate A)	
Antistatic device	Complies with ISO 7121 and BS 5351

### Sizes and pipe connections

#### Full bore

1/4", 3/8", 1/2", 3/4", 1", 1 1/4" and 1 1/2"  
Screwed NPT, BW, SW

#### Reduced bore

1/4", 3/8", 1/2", 3/4", 1", 1 1/4", 1 1/2" and 2"  
Screwed NPT, BW, SW

### Pressure / temperature limits

**The product must not be used in this region.**

- A - B** 1/4", 3/8" and 1/2" RB
- A - C** 1/2" FB; 3/4" and 1" RB
- A - D** 1" FB; 1 1/4", 1 1/2" and 2" RB

	Maximum allowable (operating) pressure (PMO)	1/4", 3/8" and 1/2" RB	5075 psi
PMA	Maximum allowable (operating) pressure (PMO)	1/2" FB; 3/4" and 1" RB	4567 psi
		1" FB; 1 1/4", 1 1/2" and 2" RB	4060 psi
TMA	Maximum allowable temperature		176°F
	Minimum allowable temperature		-20°F
TMO	Maximum operating temperature	176°F @ 3045 psi g	
	Minimum operating temperature		-20°F

**Note:** For lower operating temperatures consult Spirax Sarco

ΔPMX Maximum differential pressure is limited to the PMO  
Designed for a maximum cold hydraulic test pressure of 1.5 x PMO

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

The indicated torque values are for valves frequently operated, that are submitted to a maximum differential pressure. Valves that are subject to long static periods, may require greater break-out torque.

**Safety information, installation and maintenance**  
Installation and Maintenance Instructions, IM-P133-74.

**How to order example:**

1 off Spirax Sarco 1/2" screwed NPT M10HPi2FB ISO ball valve.

**Spare parts**

The spare parts available are shown in solid outline. Parts drawn in broken line are not supplied as spares.

**Available spares**

Seat, seals, body / cap 'O' ring and seat 'O' ring set **5, 6, 15, 17, 20, 22**

**How to order spares**

Always order spares by using the description given in the column headed 'Available spares' and state the size and type of ball valve.

**Example:** 1 - Seat, seals, body / cap 'O' ring and seat 'O' ring set for a Spirax Sarco 1/2" M10HPi2FB ISO ball valve.

# M10Ti ISO "Teflon Free" Ball Valve

## 1/4" to 2 1/2"

### (Not Suitable for Steam)

#### Description

The M10Ti ISO three-piece body ball valve has been designed for use as an isolating valve, not a control valve, has a lockable handle as standard and can be serviced without removal from the pipeline (screwed and welded versions only). It has been specially designed for applications that cannot use Teflon, for example the tobacco industry. The seat and seals are of UHMWPE (Ultra High Molecular Weight Polyethylene).

#### ISO mounting

The integral ISO body mounting allows the valve to be automated without losing seal integrity, as the body does not require disassembly. Manual to remote control may therefore be easily accomplished by the ISO range of Spirax Sarco ball valves.

#### Available types

<b>M10Ti2 ISO</b>	Zinc plated carbon steel body and caps.
<b>M10Ti4 ISO</b>	Complete stainless steel construction.

**Note:** The nomenclature will be followed with either **FB** (full bore) or **RB** (reduced bore).

#### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the **CE** mark when so required.

#### Certification

This product is available with certification to EN 10204 3.1. **Note:** All certification/inspection requirements must be stated at the time of order placement.

#### Options

- Self-venting ball.
- Extended stem 4" (100 mm) to allow full insulation. (manual operation only)

#### Technical data

Flow characteristic	Modified linear
Port	Full and reduced bore versions
Leakage test procedure to ISO 5208 (Rate A)/EN 12266-1 (Rate A)	
Antistatic device (optional)	Complies with ISO 7121 and BS 5351

# M10HTi ISO "Teflon Free" Ball Valve

## 1/4" to 2 1/2"

### (Medium Pressure Applications)

#### Description

The M10HTi ISO three-piece body ball valve has a lockable handle and ISO mounting as standard and features a special ball, which has received a surface hardening. This particular ball valve has been specially designed for applications that cannot use Teflon at high temperatures, for example the tobacco industry. The M10HTi ISO has been designed for use as an isolating valve, not a control valve, and can be serviced without removal from the pipeline.

#### ISO mounting

The integral ISO body mounting allows the valve to be automated without losing seal integrity, as the body does not require disassembly. Manual to remote control may therefore be easily accomplished by the ISO range of Spirax Sarco ball valves.

#### Available types

<b>M10HTi2 ISO</b>	Zinc plated carbon steel body and caps.
<b>M10HTi4 ISO</b>	Complete stainless steel construction.

**Note:** The nomenclature will be followed with either **FB** (full bore) or **RB** (reduced bore) and needs to be stated when placing an order.

#### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the **CE** mark when so required.

#### Certification

This product is available with certification to EN 10204 3.1. **Note:** All certification / inspection requirements must be stated at the time of order placement.

#### Options

- Self-venting ball.
- Extended stem 4" (100 mm) to allow full insulation. (manual operation only)

#### Technical data

Flow characteristic	Modified linear
Port	Full and reduced bore versions
Leakage test procedure to ISO 5208 (Rate A)/EN 12266-1 (Rate A)

## Operating torque (Lb-Ft)

Size	1/4"	3/8"	1/2"	3/4"	1"	1-1/4"	1-1/2"	2"	2-1/2"
Reduced Bore	2.4	2.4	2.4	4.0	9.7	14.7	36.8	44.2	55.3
Full Bore	2.4	2.4	4.0	9.7	14.7	36.8	44.2	55.3	-

The indicated torque values are for valves frequently operated, that are submitted to a maximum differential pressure of 580 psi. Valves that are subject to long static periods, may require greater break-out torque.

## Safety information, installation and maintenance

Installation and Maintenance Instructions, IM-P133-75.

### How to order example:

1 off Spirax Sarco 1/2" screwed NPT M10HTi2FB ISO ball valve.

### Spare parts

The spare parts available are shown in solid outline. Parts drawn in broken line are not supplied as spares.

### Available spares

Seat, seals, body / cap 'O' ring and seat 'O' ring set

5, 6, 16, 18, 21, 23

### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the size and type of ball valve.

**Example:** 1 - Seat, seals, body / cap 'O' ring and seat 'O' ring set for a Spirax Sarco 1/2" M10HTi2FB ISO ball valve.

# M10Pi ISO Ball Valve

## 1/4" to 2 1/2"

### (High Static Pressure Applications)

#### Description

The M10Pi ISO three-piece body ball valve has been designed for use as an isolating valve, not a control valve, has a lockable handle as standard and can be serviced without removal from the pipeline (screwed and welded versions only). It can be used with process fluids for services ranging from vacuum to the higher temperatures and pressures.

#### ISO mounting

The integral ISO body mounting allows the valve to be automated without losing seal integrity, as the body does not require disassembly. Manual to remote control may therefore be easily accomplished by the ISO range of Spirax Sarco ball valves.

#### Available types

**M10Pi2 ISO** Zinc plated carbon steel body and caps.

**M10Pi4 ISO** Complete stainless steel construction.

**Note:** The nomenclature will be followed with either **FB** (full bore) or **RB** (reduced bore).

#### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the **CE** mark when so required.

#### Certification

This product is available with certification to EN 10204 3.1. **Note:** All certification/inspection requirements must be stated at the time of order placement.

#### Options

- Self-venting ball.
- Extended stem 4" (100 mm) to allow full insulation.\*
- Oval handle for confined spaces. Ideal for trap modules.\*

\*manual operation only

#### Technical data

Flow characteristic	Modified linear
Port	Full and reduced bore versions
Leakage test procedure to ISO 5208 (Rate A)/EN 12266-1 (Rate A)	
Antistatic device	Complies with ISO 7121 and BS 5351

#### Sizes and pipe connections

##### Full bore

1/4", 3/8", 1/2", 3/4", 1", 1 1/4", 1 1/2" and 2"  
Screwed NPT, BW, SW

##### Reduced bore

1/4", 3/8", 1/2", 3/4", 1", 1 1/4", 1 1/2", 2" and 2 1/2"  
Screwed NPT, BW, SW

#### Pressure/temperature limits

The product **must not** be used in this region.

PMA	Maximum allowable pressure	2030 psi g @ 89°F
TMA	Maximum allowable temperature	500°F @ 0 psi g
	Minimum allowable temperature	-20°F
PMO	Maximum operating pressure for saturated steam service	254 psi g
TMO	Maximum operating temperature	500°F @ 0 psi g
	Minimum operating temperature	-20°F
<b>Note:</b> For lower operating temperatures consult Spirax Sarco		
ΔPMX	Maximum differential pressure is limited to the PMO	
Designed for a maximum cold hydraulic test pressure of 3045 psi g		

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-P133-69-US 12.14

### Safety information, installation and maintenance

Installation and Maintenance Instructions, IM-P133-72.

### How to order example:

1 off Spirax Sarco 1/2" screwed NPT M10Pi2FB ISO ball valve.

### Spare parts

The spare parts available are shown in solid outline. Parts drawn in broken line are not supplied as spares.

### Available spare

Seat, seals and body gasket set

5, 6, 18, 21

### How to order spares

Always order spares by using the description given in the column headed 'Available spare' and state the size and type of ball valve.

**Example:** 1 - Seat, seals and body gasket set for a Spirax Sarco 1/2" M10Pi2FB ISO ball valve.

## M70i ISO Forged Stainless Steel Ball Valve for Sanitary Applications (up to 2")

### Description

The M70i forged 316L stainless steel, three-piece body ball valve has ISO mounting as standard. It has been designed in accordance with ASME BPE for use as an isolating valve, not a control valve on clean steam and other high purity and aseptic processes where bacteria and media deposits can put product quality at risk. The low maintenance, clean design is suitable for steam, liquid and gas services ranging from vacuum to the higher temperatures and pressures. Applications include the pharmaceutical, biotech, food and beverage and cosmetics industries.

#### Principal features:

- **True port design** - The internal diameter of the end connections and ball precisely match that of the connecting tubing to guarantee drainability.
- **Forged material** - The M70i is manufactured from high integrity ASTM A182 F316L.
- **Low ferrite** - Body and end connections have <1% ferrite content to help prevent rouge.
- **Designed with orbital welding in mind** - ASME BPE compliant extended tube weld end connections means that automatic orbital welding can be performed without valve disassembly and low sulphur (0.005% to 0.017%) content helps a consistent and fully penetrated weld.
- **Designed for automation** - ISO 5211 mounting pad as standard enabling simple actuator mounting.
- **Lockable handle** - A spring loaded lockable handle allows the valve to be locked in the chosen position – ensuring system integrity.

#### Surface finish

Standard internal surface finish is 0.5 micron Ra (20 micro inch). Electro-polishing to 0.375 micron Ra (15 micro inch) is available to special order. External surface finishes are as forged / machined.

#### Available types

<b>M70iV ISO</b>	Virgin PTFE TFM 1600
<b>M70iVEP ISO</b>	Virgin PTFE TFM 1600 electro-polished to 0.375 micron Ra
<b>M70iG ISO</b>	Mineral filled RPTFE
<b>M70iGEP ISO</b>	Mineral filled RPTFE electro-polished to 0.375 micron Ra

#### Optional extras:

- Extended stem 4" (100 mm) to allow for insulation. (manual operation only)
- Cavity fillers are provided as standard. If cavity fillers are not required please specify when placing an order.

#### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC.

#### Certification:

- Material Certification to EN 10204 3.1
- Elastomer FDA / USP compliance certificate.
- Surface finish certification.

**Note:** All certification / inspection requirements must be stated at the time of order placement.

#### Packaging

The M70i is finished and packaged in a segregated clean environment. Each valve is end capped and sealed in a plastic bag, in accordance with ASME BPE, to ensure the ingress of dirt is avoided.

#### Sizes and pipe connections

1/2", 3/4", 1", 1-1/2", 2" sanitary clamp (ASME BPE).

1/2", 3/4", 1", 1-1/2", 2" extended O/D tube weld ends (ETO) (ASME BPE).

Sanitary clamp / ETO combinations are also available.

2-1/2", 3" and 4" forged valves are also available to special order.

**Alternatively:** 2-1/2", 3" and 4" investment cast sanitary ball valves are available through our M80i range - see TI-P182-06-US.

**Note:** Other connection options are available on request. Please consult Spirax Sarco.

## M80i ISO Stainless Steel Ball Valve for Sanitary Applications (2½" to 4")

### Description

The M80i cast 316L stainless steel, three-piece body ball valve has ISO mounting as standard. It has been designed in accordance with ASME BPE for use as an isolating valve, not a control valve on clean steam and other high purity and aseptic processes where bacteria and media deposits can put product quality at risk. The low maintenance, clean design is suitable for steam, liquid and gas services ranging from vacuum to the higher temperatures and pressures. Applications include the pharmaceutical, biotech, food and beverage and cosmetics industries.

### Principal features:

- **True port design** - The internal diameter of the end connections and ball precisely match that of the connecting tubing to guarantee drainability.
- **Low ferrite** - M80i has <3% ferrite content on all wetted parts helping to prevent rouge.
- **Designed with orbital welding in mind** - ASME BPE compliant extended tube weld end connections means that automatic orbital welding can be performed without valve disassembly and low sulphur (0.005% to 0.017%) content helps a consistent and fully penetrated weld.
- **Designed for automation** - ISO 5211 mounting pad as standard enabling simple actuator mounting.
- **Lockable handle** - A spring loaded lockable handle allows the valve to be locked in the closed position – ensuring system integrity.

### Surface finish

The M80i standard internal surface finish is electro-polished to 0.375 micron Ra (15 micro inch). External surface finishes are as cast / machined.

### Available types

<b>M80iV ISO</b>	Virgin PTFE TFM 1600 electro-polished to 0.375 micron Ra
------------------	---

### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC.

### Certification:

- Material Certification to EN 10204 3.1
- Elastomer FDA / USP compliance certificate.
- Surface finish certification.

**Note:** All certification / inspection requirements must be stated at the time of order placement.

### Packaging

The M80i is finished and packaged in a segregated clean environment. Each valve is end capped and sealed in a plastic bag, in accordance with ASME BPE, to ensure the ingress of dirt is avoided.

### Sizes and pipe connections

2-1/2", 3" and 4" Sanitary clamp (ASME BPE).  
2-1/2", 3" and 4" extended O/D tube weld ends (ETO) (ASME BPE).

**Alternatively:** 1/2", 3/4", 1", 1-1/2" and 2" sanitary ball valves are available through our M70i range - see TI-P182-05-US.

**Note:** Other connection options are available on request. Please consult Spirax Sarco.

The product **must not** be used in this region.

**A - B** Virgin PTFE TFM 1600

PMA Max. allowable pressure	900 psig @ 68°F
TMA Max. allowable temperature	390°F @ 0 psig

Isolation  
Valves

# M33S ISO Full Bore Ball Valve API 6D 2" to 8" ASME 150 and ASME 300 (Medium Pressure Applications)

## Description

Produced in accordance with API 6D the M33S ISO full bore two-piece body ball valve with floating ball, has been designed for use as an isolating valve, not a control valve. It can be used with the majority of industrial fluids on applications, which include steam, condensate, water, oil, gases, and other fluids within its operating range.

The M33S ISO ASME has as standard an ISO mounting pad in accordance with ISO 5211.

## Available types

<b>M33S2 ISO</b>	Zinc plated carbon steel body, PDR 0.8 seats (for high temperatures) and ISO mounting.
<b>M33S3 ISO</b>	Stainless steel body, PDR 0.8 seats (for high temperatures) and ISO mounting.

## Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the CE mark when so required.

## Certification

This product is available with certification to EN 10204 3.1. **Note:** All certification / inspection requirements must be stated at the time of order placement.

## Options

- Hollow ball for 6" and 8" sizes - Not API 6D rated.
- Self-venting ball.
- Ring joint flanges.
- Extended stems to allow full insulation for 3" and 4" sizes.\*
- Operation by mechanical or pneumatic actuator URPA series for all sizes.
- Operation by pneumatic actuator URPA series and mechanical declutchable actuator.
- Lockable handle.\*
- Materials according to NACE MR 0175.
- Surge valve.
- Drain plug.

\*manual operation only

## Sizes and pipe connections

2", 2½", 3", 4", 6" and 8"  
Standard flange ASME Class 150 and 300 with face-to-face dimensions according to B 16.10.

## Technical data

Flow characteristic	Modified linear
Port	Full bore
Leakage test procedure to ISO 5208 (Rate A) / EN 12266-1 (Rate A) and BS 5351	
Antistatic device	Complies with ISO 7121 and BS 5351

6"	15.8	33.5	11.1	12.5	5.9	7.0	245
8"	19.7	37.4	12.5	15.0	7.9	8.4	409

### C<sub>v</sub> values

Inches	2"	2½"	3"	4"	6"	8"
C <sub>v</sub>	346	497	867	1191	2786	5549

### Operating torque lb/ft

Inches	2"	2½"	3"	4"	6"	8"
lb/ft	44	59	73	147	442	553

The torque figures shown are for a valve at maximum operating pressure that is operated frequently. Valves that are subject to long static periods, may require greater break-out torque.

### Safety information, installation and maintenance

Installation and Maintenance Instructions, IM-P133-65.

### How to order

<b>Size</b>	2", 2½", 3", 4", 6", 8"
<b>Model</b>	M33S_ISO
<b>Specify:</b>	
<b>Body material</b>	2 = Carbon steel 3 = Stainless steel
<b>Flanges</b>	ASME 150 or ASME 300

**Example:** 1 off Spirax Sarco 2" flanged ASME 150 M33S2 ISO ball valve.

## Spare parts

The spare parts available are shown in solid outline. Parts drawn in broken line are not supplied as spares.

### Available spares

Seats, body gasket, steam seals, stem 'O' ring set and seat 'O' ring

4, 5, 7, 8, 9, 28

### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the size and type of ball valve.

**Example:** 1 - Seats, body gasket, stems seals and stem and seat 'O' ring set for a Spirax Sarco 3" flanged ASME M33S2 ISO ball valve

# M33V ISO Full Bore Ball Valve API 6D 2" to 8" ASME 150 and 300 (Low Pressure Application)

## Description

Produced in accordance with API 6D the M33V ISO full bore two-piece body ball valve with floating ball, has been designed for use as an isolating valve, not a control valve, on applications at low temperatures which use natural gas and most of the hydrocarbon fluids in the OPC refinery sites.

The M33V ISO ASME has as standard an ISO mounting pad in accordance with ISO 5211.

## Available types

**M33V2 ISO** Zinc plated carbon steel body, PTFE seats and ISO mounting.

**M33V3 ISO** Stainless steel body, PTFE seats and ISO mounting.

## Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the CE mark when so required.

## Certification

This product is available with certification to EN 10204 3.1. **Note:** All certification / inspection requirements must be stated at the time of order placement.

## Options

- Hollow ball for 6" and 8" sizes - Not API 6D rated.
- Self-venting ball.
- Ring joint flanges.
- Extended stems to allow full insulation for 3" and 4" sizes.\*
- Operation by mechanical or pneumatic actuator URPA series for all sizes.
- Operation by pneumatic actuator URPA series and mechanical declutchable actuator.
- Lockable handle.\*
- Materials according to NACE MR 0175.
- Surge valve.
- Drain plug.

\*manual operation only

## Sizes and pipe connections

2", 2½", 3", 4", 6" and 8"

**Standard flange** ASME Class 150 and 300 with face-to-face dimensions according to B 16.10.

## Technical data

Flow characteristic	Modified linear
Port	Full bore
Leakage test procedure to ISO 5208 (Rate A) / EN 12266-1 (Rate A) and BS 5351	
Antistatic device	Complies with ISO 7121 and BS 5351

2" shown

Isolation  
Valves

# M33F ISO Full Bore Ball Valve API 6D Firesafe API 607 2" to 8" ASME 150 and 300

## Description

Produced in accordance with API 6D the M33F ISO full bore two-piece body ball valve with floating ball, has an API 607 firesafe proof design. It is designed for use as an isolating valve, not a control valve and can be used with the majority of industrial fluids on applications, which include steam, condensate, water, oil, gases, and other fluids within its operating range.

The M33F ISO ASME has as standard an ISO mounting pad in accordance with ISO 5211.

## Firesafe design

In normal working conditions, the ball rests against two TAT seats ensuring total closure. When the valve is submitted to temperature above the limits the seats can withstand, the seat becomes deformed and renders to extrusion. When the seats have been totally destroyed, the ball will come to rest firmly against the metal seat in the cap, producing a metal-to-metal closing. This secondary seat in the valve cap ensures the valve will operate to international API 607 standards.

## Available types

**M33F2 ISO** Zinc plated carbon steel body, TAT seats (for high temperatures) and ISO mounting.

**M33F3 ISO** Stainless steel body, TAT seats (for high temperatures) and ISO mounting.

## Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the **CE** mark when so required.

## Certification

This product is available with certification to EN 10204 3.1. **Note:** All certification / inspection requirements must be stated at the time of order placement.

## Options

- Hollow ball for 6" and 8" sizes - Not API 6D rated.
- Self-venting ball.
- Ring joint flanges.
- Extended stems to allow full insulation for 3" and 4" sites.\*
- Operation by pneumatic actuator URPA series and mechanical declutchable actuator.
- Operation by mechanical or pneumatic actuator URPA series for all sizes.

C <sub>v</sub>	34	46	93	119	227	286	671	849

### Operating torques (ft - lb)

Inches	1"	1¼"	1½"	2"	2½"	3"	4"	6"
ft-lb	14	18	26	33	41	66	89	103

**Note:** The torque figures shown are for a valve that is frequently operated at the maximum operating pressure. Valves that are subject to long static periods, may require a greater break-out torque.

### Safety information, installation and maintenance

Installation and Maintenance Instructions, IM-P133-79.

### How to order

Specify	Size	Seats	S
	Model		V
	Seats		2 = Carbon steel
	Material		3 = Stainless steel

**Example:** 1 off Spirax Sarco 2" M40Vi2 ISO ball valve having flanged ASME 150 connections.

### Optional extras:

- Self-venting ball.
- Extended stems 50 mm (2") and 100 mm (4") to allow full insulation.\*
- Lockable handle.\*
- 100 mm extended stem with lockable handle.\*

\*manual operation only

## 1" to 2" - Spare parts

The spare parts available are shown in solid outline. Parts drawn in broken line are not supplied as spares.

### Available spares

Seats, insert 'O' ring and stem seals

5, 6, 9, 10

### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the size and type of ball valve.

**Example:** 1 set of seats, insert 'O' ring and stem seals for a Spirax Sarco 2" flanged ASME 150 M40Si2 ball valve.

## 2½" to 6" - Spare parts

The spare parts available are shown in solid outline. Parts drawn in broken line are not supplied as spares.

### Available spares

Seats, insert 'O' ring, seat 'O' ring, stem 'O' ring, lower stem seals and upper stem packaging

5, 6, 7, 8, 11, 12

### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the size and type of ball valve.

**Example:** 1 set of seats, insert 'O' ring, seat 'O' ring, stem 'O' ring, lower stem seals and upper stem packaging for a Spirax Sarco 2" flanged ASME 150 M40Si2 ball valve.

## BVA300 Series Pneumatic Actuators for Spirax Sarco Ball Valves

### Description

The BVA300 series are pneumatic rotary actuators which automate Spirax Sarco ball valves in a wide range of industrial applications. BVA300 actuators are provided with bi-directional travel stop that allow a rotation of 90°±5°. Linkage is made with the new BVL\_X kits with extended stem.

### The pneumatic actuated ball valve range comprises:-

#### Actuators combined with three-piece ball valves:

M10Vi ISO, M10Si ISO, M10HPi ISO, M10Pi ISO\*, M10Ti ISO, M10F ISO, M10Hi ISO, M10HTi, M70i ISO and M80i ISO

#### Actuators combined with two-piece ball valves:

M33V ISO, M33S ISO and M33F ISO

#### Actuators combined with one-piece ball valves:

M21S ISO, M20S, M20H\*, M40V ISO, M40S ISO, M40F ISO and M40H ISO\*

\***BVA300 note:** For use with these valves, contact Spirax Sarco.

### Available types of BVA actuator

<b>Double acting:</b>	310D, 315D, 320D, 325D, 330D, 335D, 340D, 345D, 350D, 355D, 360D, 365D
<b>Single acting (spring return):</b>	310S, 315S, 320S, 325S, 330S, 335S, 340S, 345S, 350S, 355S, 360S, 365S.

**Note:** The BVA365D will be selected when higher torques are required for further data contact Spirax Sarco.

### Spring quantity selection

According to the available air pressure, the BVA has different spring configurations. For more details, see the Installation and Maintenance Instructions IM-P372-24.

BVA	Springs					
	S/4	S/6	S/8	S/10	S/12	S/14
310	•	•	•			
315 - 365			•	•	•	•

**Example:** BVA325S/10 has 10 springs.

### Optional extras

**Solenoid valve:** a range of Namur electrical valves with an encapsulation rating to IP65 minimum is available for use with BVA actuators. These can be used to drive actuators with compressed air or non-corrosive gas.

Solenoid	Coil voltage
3/2 NAMUR for BVAS	220 Vac
	110 Vac
	24 Vac/dc
5/2 NAMUR for BVAD	220 Vac
	110 Vac
	24 Vac/dc

**Note: IP65 and IP67 Electric Protection** Explosion proof solenoid valves and ASI option available on request.

**Limit switch box:** a range of limit switch boxes are available to indicate ball valve position. It also allows switching points to be adjustable over the full range of actuators. See TI-P372-26 for details.

#### Available types

LSB3_IP67 Protection	IP68 (optional)
LSB7_Exp. Proof Exd IIc	T6, IP67 (optional)

Adjustable switches

### Technical data

Maximum pressure	(8 bar g) 120 psig
Minimal pressure	(3 bar g) 45 psig
Operating pressure range (standard)	(3, 4, 5 or 6 bar g) 45, 60, 75 or 90 psig
Operating temperature range	(-30°C to 100°C) -22°F to 212°F
<b>Note:</b> Other operating temperature ranges available on request.	
Operating media	Compressed air (clean and dry) Non corrosive gas Light hydraulic oil (must be compatible with 'O' rings)
Rotation 90 ±5°	Anti-clockwise with port 'A' pressurised

### Materials

No	Part	Material
1	Body	Aluminium hard anodized
3	Pinion	Nickel plated carbon steel
4	End caps	Aluminium epoxy coated
20	Bolt	Stainless steel
21	Indicator cap	Polyamide
22	Colored indicator	Polyamide

**Note:** Item 3 is shown clearly in the spares drawing on page 2.

### BVL\_X linkage kit components and materials

**Note:** The BVL\_X for the M20 is made in zinc plated carbon steel.

Frame	Stainless steel AISI 304
Stem adapter	Stainless steel AISI 304
Frame-to-actuator screws	Stainless steel Gr. 5
Washers	Stainless steel
Frame-to-valve screws	Stainless steel Gr. 5
Stem nut	Stainless steel

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

# Compressed air consumption

Nm<sup>3</sup>/stroke

BVA365	37.04 (940)	24.82 (630)	17.10 (434)	16.35 (415)	8.39 (213)	7.92 (201)	404 (183)	286 (129.4)

Note: 1/4 NPT adaptor fitting is available

## How to order

Note: You will need to refer to the selection tables (pages 3 to 8) before placing an order.

- How to order example:**  
 1 - Spirax Sarco BVA320S/8 actuator  
 1 - 3/2 NAMUR solenoid 24 VAC  
 1 - BVL337X linkage kit  
 1 - LSB3 limit switch box

Note: Actuated ball valves may be supplied completely assembled to suit the application.

Exploded view of the spring set

## Typical assembly

- A - BVA300 series actuator
- B - Spirax Sarco ball valve
- C - Linkage kit (BVL\_X)
- D - Solenoid valve
- E - Limit switch box

## Spare parts

The spare parts available are detailed below. No other parts are supplied as spares.

Available spares	
'O' rings set	7, 8, 11, 12, 16
BVA300 series maintenance kit	(available either in NBR, Viton or Silicon)
Pinion washers	13, 14, 15
Others	5, 6, 10, 17, 18

## How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the nomenclature of the pneumatic actuator that they are intended for. Note: all the spares mentioned above are sold together in one spare part kit.

Example: 1 - BVA300 series maintenance kit with 'O' rings in NBR for a Spirax Sarco BVA320S/08 pneumatic actuator.

## URPA Series

### Pneumatic Rack and Pinion Actuators for Spirax Sarco Ball Valves (M10Si, M10Vi, M10Ti, M33, & M40)

#### Description

The URPA series is a range of spring return (90°) pneumatic rack and pinion actuators which automate Spirax Sarco ball valves in a wide range of industrial applications. Actuators will operate at temperatures between -10°F to 195°F and input pressures at 80 psig. Two types of service are available: Light Service and Heavy Service. Patented spring cartridges are preloaded and designed to remain self-contained.

**Note:** A Double Acting model (90°, 120°, 135° and 180°) is available upon request.

#### Standards and Approvals

The URPA series pneumatic rack and pinion actuators are manufactured in compliance with the following agency standards and approvals:

- UL & CSA approved
- Safety Integrity Level (SIL) 3 certified under IEC Standards 61508 and 61511
- ISO 9001:2008
- ATEX certified under Directive 94/9/CE

Accessory mounting patterns on the actuator body conform to NAMUR standards and the actuator drive shaft meets all ISO 5211 dimensional standards.

#### The pneumatic actuated ball valve range

Actuators combined with three-piece ball valves:

M10Si, M10Vi and M10Ti

Actuators combined with two-piece ball valves:

M33S, M33V and M33F

Actuators combined with one-piece ball valves:

M40Si, M40Vi and M40Hi

For all other ranges to be mounted with URPA actuators, please contact Spirax Sarco, Inc, Blythwood, SC

#### Spring Cartridges

The patented spring cartridges are preloaded and uniquely designed to remain self-contained. The actuators can easily be changed in the field from double acting to spring return by simply inserting the required number of our spring cartridges into the actuator body.

According to the available air pressure, the URPA has different cartridge spring configurations. The actuator can accept up to 6 cartridge springs in each end cap, but not less than 2 spring cartridges per end cap. The number of cartridge springs loaded into the actuator affects the amount of torque the actuator will be able to generate during the closing and opening cycles. For more details, see the Installation and Maintenance Instructions.

Total # of Cartridge Springs	2	3	4	5	6
Spring Location (Right cap)	1/4	1/3/5	2/3/5/6	1/3/4/5/6	All Positions
Spring Location (Left cap)	1/4	1/3/5	2/3/5/6	1/3/4/5/6	All Positions

#### Materials

No	Part	Material
1	Body	Extruded Aluminium Alloy ASTM 6063 Anodized 10681
	Pinion	Steel IISMNP337 Electroless Nickel plated
4	End caps	Die Cast Aluminium Alloy EN AC-46100 UNII EN 1706:1999
20	Bolt	Stainless steel
21	Indicator cap	Polyamide
22	Colored indicator	Polyamide

#### URPA linkage kit components and materials

Frame	Stainless steel AISI 304
Stem adapter	Stainless steel AISI 304
Frame-to-actuator screws	Stainless steel Gr. 5
Washers	Stainless steel
Frame-to-valve screws	Stainless steel Gr. 5
Stem nut	Stainless steel

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

## Pneumatic Rack and Pinion Actuators for Spirax Sarco Ball Valves

Dimensions / weights approximate in inches and pounds

### Optional extras

**Solenoid valve:** a range of direct Namur electrical valves. 5/2 or 3/2 NC operation. Intended for use with URPA actuators. These can be used to drive actuators with compressed air or non-corrosive gas. UL, CSA and CE certification is available.

### Performance Data

CV Rating	Body	Positions	Airports
1.4	Anodized aluminum SS available	5/2 or 3/2 NC	¼" NPT
Working Temperature	Working Medium	Working Life	Frequency
23°F - 176°F	Less than 40 microns of filtered and dried air	1 million cycles	5 cycles per second

### Number of Coils

1 - Single Coil

### Enclosure Rating

Nema 4, 4x (UL CSA)

### Voltage

110/120VAC

24VDC Standard (6.9 Watt)

### Option

SC - Speed Control Needle Valve

**Note: IP65 and IP67 Electric Protection** Explosion proof solenoid valves and ASI option available on request.

**Limit switch box:** a range of limit switch boxes are available to indicate ball valve position. It also allows switching points to be adjustable over the full range of actuators.

### Available types

SENITEC NEMA 4 Copolyester NAMUR

### Technical data

Maximum pressure 120 psig

Minimal pressure 45 psig

Operating pressure range 80 psig (standard)

**Note:** Other operating pressure ranges available on request

Operating temperature range -22°F to 212°F

Operating media Compressed air (clean and dry)

Non corrosive gas

Light hydraulic oil

(must be compatible with 'O' rings)

Rotation 90 ±5° Anti-clockwise with port 'A' pressurised

Actuator	A	B	C	Weight
URPA-K20K33	4.6	3.4	2.4	2.0

URPA-K633K55	14.9	9.0	6.8	34.0
URPA-K1831K44	24	13.1	10.7	132.3
URPA-K2928K55	24	13.1	10.7	132.3

### Typical assembly

A - URPA series actuator

B - Spirax Sarco ball valve

C - Linkage kit

D - Solenoid valve

E - Limit switch box

### Spare parts

The spare parts available are detailed below. No other parts are supplied as spares.

### Available spares

URPA series 'O' rings set

maintenance kit Pinion washers

### How to order

You will need to refer to the selection tables on this technical sheet before placing an order.

**Example:** Pneumatic Rack and Pinion Actuator needed to fit a 1½" M10Si2FB. Available air operating pressure is 80 psi

### How to order example:

1 - URPA-K105K44 Actuator

1 - B/6 Linkage Kit

## Air Eliminators 13WS, 13WHS

13WS and 13WHS Air Eliminators improve the circulation of pressurized liquids by eliminating air and other non-condensable gases which may collect at high points in the system. The EPDM valve head ensures tight shut-off.

Model	13WS	13WHS
PMO	150 psig	300 psig
Sizes	3/4" x 3/8", 1" x 3/8"	3/4" x 3/8"
Connections	NPT	
Construction	Cast Iron Body Stainless Steel internals w/ EPDM valve head	
Options	Brass Body; 13WS only	

### Limiting Operating Conditions

**Max. Operating Pressure (PMO)** 13WS: 150 psig (10 barg)  
13WHS: 300 psig (21 barg)

**Max. Operating Temperature** 13WS & 13WHS: 338°F (170°C)

### Pressure Shell Design Conditions

**PMA** 13WS: 150 psig/0-353°F 10 barg/0-178°C  
Max. allowable pressure 13WHS: 300 psig/0-317°F 21 barg/0-158°C

**TMA** 13WS: 450°F/0-125 psig 232°C/0-9 barg  
Max. allowable temperature 13WHS: 450°F/0-250 psig 232°C/0-17 barg

### Construction Materials

No.	Part	Material	
1	Body	Cast Iron	ASTM A126 CL B
	Optional 13WS	Brass	ASTM B62
2	Cover	Cast Iron	ASTM A126 CL B
	Optional 13WS	Brass	ASTM B62
3	Cover Bolts	Steel	ASTM A449
4	Cover Gasket	Graphite	
5	Valve Seat	Stainless Steel	Type 303
6	Seat Gasket	Stainless Steel	Type 304
7	Valve Head	EPDM	
8	Float Arm	Stainless Steel	Type 304
9	Bracket	Stainless Steel	Type 301
10	Float	Stainless Steel	Type 304

### Typical Applications

Air vents can be used on both hot and cold liquid services. Typical applications are cold water lines, suction lines to pumps, mixing tanks, condensate return lines, cooling water lines on air compressors, and water storage tanks.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-4-006-US 10.15

# Air Eliminators 13WS, 13WHS

## Air Capacity (discharge to atmosphere)

SCFM cubic feet per minute at standard conditions of 14.7 psia at 60°F. For dm<sup>3</sup>/s multiply by .4719.

### Inlet Pressure

Type	psi	25	50	75	100	150	200	250	300
	bar	1.7	3.4	5.2	6.9	10.3	13.8	17.2	20.7
13WS		1.6	2.7	3.7	4.8	6.9	-	-	-
13WHS		1.1	1.8	2.5	3.2	4.6	6.0	7.4	8.8

### Dimensions (nominal) in inches and millimeters

Size		A	B	Weight
3/4"	13WS	5.1	4.4	4.75 lb
		129	111	2.2 kg
1"	13WS	5.1	4.4	4.75 lb
		129	111	2.2 kg
3/4"	13WHS	6.0	4.75	5.0 lb
		152	121	2.3 kg

## Installation

An air vent is required at all high points of a liquid system, on terminal equipment and wherever air can collect. The air vent must be installed vertically above the pipe or equipment with the inlet at the bottom. The inlet piping should be the same size as the body piping connection, and a full-port isolating valve should be installed to permit servicing. The discharge must be piped to drain or other safe place to prevent damage if the air vent should malfunction.

## Maintenance

This product can be maintained without disturbing the inlet piping connection. Complete isolation is required before any servicing is performed.

The air vent should be disassembled periodically for inspection and cleaning of the valve head and seat and operating mechanism.

Worn or damaged parts should be replaced using a complete valve mechanism assembly and new cover gasket.

Complete installation and maintenance instructions are given in IM-4-006, which accompanies the product.

## Sample Specification

Automatic Air Eliminators shall be mounted at high points to provide for immediate removal of contained air or other non-condensable gases in liquid piping systems. They shall be of the float type design, having cast iron (brass or stainless steel) bodies with threaded connections. Valve head shall be of EPDM material to provide positive shut-off. All other internals to be stainless steel. Air vent shall have minimum venting capacity of 4.8 SCFM at 100 psig. Spirax Sarco model 13WS for 150 psig service and model 13WHS for 300 psig service.

# spirax sarco

## Air Eliminators AE30, AE30A

AE30 and AE30A Air Eliminators are designed to improve the circulation of pressurized liquids by eliminating air and other non-condensable gases which may collect at high points in the system. The AE30A has a check valve in the outlet orifice.

Model	AE30 AE30A
PMO	116 psig
Sizes	1/2" x 1/4"
Connections	NPT
Construction	Brass Body Stainless Steel, Rubber and Plastic Internals
Options	BSP Connections

### LIMITING OPERATING CONDITIONS

• e t i g P e e ( P ) 116 psig (8 barg)

• e t i g T e e t e 230°F (110°C)

### PRESSURE SHELL DESIGN CONDITIONS

**P A** 145 psig/0-230°F 10 barg/0-110°C  
Max. allowable pressure

**T A** 230°F/0-145 psig 110°C/0-10 bar  
Max. allowable temperature

### TYPICAL APPLICATIONS

Air vents can be used on both hot and cold liquid services. Typical applications are cold water lines, suction lines to pumps, mixing tanks, condensate return lines, cooling water lines on air compressors, and water storage tanks.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification. TIS 4.009 US 01.97

# Air Eliminators AE30, AE30A

**i** te e i t ti e give  
**i** e the t.

## SAMPLE SPECIFICATION

Automatic Air Eliminators shall be mounted at high points to provide for immediate removal of contained air or other non-condensable gases in liquid piping systems. They shall be of the float type design having brass body with threaded connections, valve head shall be of viton rubber material to provide positive shut-off. Air vent shall have a minimum venting capacity of 5.0 SCFM at 100 psig.

## INSTALLATION

An air vent is required at all high points of a liquid system, on terminal equipment and wherever air can collect. The air vent must be installed vertically above the piping with the inlet at the bottom so that the float mechanism is rising and falling in the vertical plane. The inlet piping should be the same size as the piping connection on the body, and a full-port isolating valve should be installed upstream of the air vent. As with all air vents, dribbling may occur if the valve becomes fouled with dirt. For this reason, it is recommended that a pipe be fitted to the outlet discharge to drain or to a safe place where damage cannot occur.

## AE50S

### Automatic Air and Gas Vent for Liquid Systems

#### Description

The AE50S automatic air and gas vent is designed for use on liquid systems. It has a welded construction and the body is manufactured in 304L austenitic stainless steel.

#### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the CE mark when so required.

#### Certification

The product is available with material certification EN 10204 3.1 for bowl, cover and inlet connection as standard.

#### Sizes and pipe connections

<b>Inlet</b>	¾" female	NPT (optional BSP)
<b>Outlet</b>	½" female	NPT (optional BSP)

#### Pressure/temperature limits

The product **must not** be used in this region.

Body design conditions		ANSI 300
PMA	Maximum allowable pressure	600 psig @ 86°F (41.4 barg @ 30°C)
TMA	Maximum allowable temperature	800°F (427°C)
Minimum allowable temperature		425.2°F (-254°C)
PMO	Maximum operating pressure	600 psig @ 86°F (41.4 barg @ 30°C)
TMO	Maximum operating temperature	800°F @ 342 psig (427°C @ 23.6 barg)
Minimum operating temperature		-40°F (-40°C)
<b>Note:</b> For lower operating temperatures consult Spirax Sarco		
ΔPMX	Maximum differential pressure	435 psig (30 bar g)
Designed for a maximum cold hydraulic test pressure of 914 psig (63 bar g)		
Minimum specific gravity of liquid		0.65

#### Materials

# AE50S

## Automatic Air and Gas Vent for Liquid Systems

### Free air discharge capacity

For air at 14.7 psi @ 60°F

psig	25	50	75	100	200	300	400
barg	1.7	3.4	5.2	6.9	13.8	20.7	27.6
Capacity (SCFM)	2.1	3.2	4.9	7.4	12.5	17.6	23.3

If the temperature of the air differs from 15°C, the discharge capacity from the graph can be corrected by multiplying it by the following equation:

$$\frac{289}{273 + T} \quad (T \text{ is the actual temperature in } ^\circ\text{C})$$

It may be assumed that the temperature of the air is equal to the temperature of the water.

### Dimensions / weight approx in inches (mm) and pounds (kg)

A	B	C	D	Weight
6.9 (175)	3.1 (79)	0.73 (18.5)	1.26 (32 A/F)	2.2 (1)

### Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P017-11) supplied with the product.

#### Installation note:

The AE50S should be installed vertically with the inlet at the bottom. We recommend piping the discharge to a safe visible point or drain via an air break.

#### Installation in superheated water:

For superheated water applications we recommend that 3 ft to 6 ft of 3/4" vertical pipeline be fitted prior to the inlet of the vent. On superheated water systems the outlet pipework must be sized to accommodate any flash steam created during discharge.

Direct the outlet pipework to a safe point of discharge where there is no risk of injury to personnel or damage to property.

### Spare parts

There are no spare parts available for this sealed, maintenance free product.

### How to order

**Example:** 1 off Spirax Sarco 3/4" AE50S automatic air and gas vent manufactured in austenitic stainless steel having screwed NPT connections.

# spirax sarco

## Air Vent 6A

The 6A Air Vent has both a float and a thermostatic bellows for use where air, condensate and steam may be present (as in one pipe steam heating systems.) The 6A will discharge air, while preventing the escape of either condensate or steam. An outlet check valve prevents the re-entry of air.

<b>Model</b>	<b>6A</b>
<b>PMO</b>	15 psig
<b>Sizes</b>	3/4"
<b>Connections</b>	NPT
<b>Construction</b>	Cast Iron Body Stainless Steel Internals Nylon Check Valve

### CONSTRUCTION MATERIALS

# Balanced Pressure Thermostatic Air Vent T202

## Sample Specification

Air Vents shall be installed at the end of all steam mains and headers, and on large equipment steam spaces to facilitate start-up and heat transfer. They shall be self-adjusting balanced pressure thermostatic type with precision welded multiple plate stainless steel bellows. Head shall be hardened and both head and seat shall be stainless steel. Body and cap shall be brass and internals shall be renewable.

## Installation

The air vent should be positioned at a high point of the piping system or equipment, or where the air collects. The discharge can be hot and wet; the outlet should therefore be piped to a safe place. An isolation valve should be fitted upstream of the air vent.

## Maintenance

This product can be maintained without disturbing the inlet piping connections. Complete isolation is required before any servicing is performed.

The air vent should be disassembled periodically for inspection and cleaning of the valve head and seat.

Worn or damaged parts should be replaced using a complete element set.

**Complete installation and maintenance instructions are given in IM-4-101, which accompanies the product.**

## Vacuum Breaker VB14, VB21

The VB14 and VB21 are designed to admit air to condensing vapor (steam) or liquid systems where vacuum formation may inhibit system drainage or operation.

Model	VB14	VB21
Sizes	1/2" x 1/8"	
Connections	NPT	
Construction	Brass Body	Stainless Steel Body
	Stainless Steel Valve	
Options	BSP Connections	

### Typical Applications

Used on steam inlet to air coils, heat exchangers, sparge systems, jacketed kettles, boiler feed water tanks, chilled water lines and liquid process lines, all of which at one time or another generate vacuum conditions which must be relieved to allow proper system operation.

### Construction Materials

No.	Part	Material
1	Cap	VB14 Brass
		VB21 Stainless Steel
2	Valve Check Ball	VB14 Stainless Steel
		VB21 Stainless Steel
3	Valve Seat	VB14 Stainless Steel
		VB21 Stainless Steel
4	Body	VB14 Brass
		VB21 Stainless Steel
5	Gasket	VB14 Nickel Reinforced Exfoliated Graphite
		VB21 Stainless Steel

### Limiting Operating Conditions

**Max. Operating Pressure (PMO)** VB14: 210 psig (14 barg)  
VB21: 304 psig (21 barg)

**Max. Operating Temperature** VB14: 500°F (260°C)  
VB21: 752°F (400°C)

### Pressure Shell Design Conditions

<b>PMA</b> Max. allowable pressure	VB14:	232 psig/0-500°F	16 barg/0-260°C
	VB21:	304 psig/0-752°F	21 barg/0-400°C
<b>TMA</b> Max. allowable temperature	VB14:	500°F/0-232 psig	260°C/0-14 barg
	VB21:	752°F/0-304 psig	400°C/0-21 barg

### Operating Characteristics

Maximum Cv – 0.625.  
Vacuum required to open – 2 in H<sub>2</sub>O (0.15 in Hg)

#### AIR HANDLING CAPACITIES

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification. TI-4-103-US 01.05

# Vacuum Breaker VB14, VB21

**Dimensions (nominal) in inches and millimeters**

Size		A	B	C	Weight
1/2"	VB14	2.2	1.3	1.5	0.77 lb
		55	34	39	0.35 kg
1/2"	VB21	2.0	1.3	1.5	0.73 lb
		52	34	39	0.33 kg

## Sample Specification

Vacuum Breakers shall be used on all modulating or on/off heat exchangers and coils, except in vacuum return systems. They shall be installed in the supply side between the control valve and equipment and be of hardened ball check valve design with all working parts manufactured from stainless steel. Bodies shall be made from either brass or stainless steel depending on the application, and shall be suitable for operating conditions of 210 psig (or 304 psig) saturated steam.

## Installation

Always install in a vertical position with cap at the top. Generally the device should be mounted on the highest point of the circuit. Large coils or equipment may require more than one vacuum breaker to be fitted. An isolating valve should be fitted to facilitate servicing.

## Maintenance

After the vacuum breaker is isolated from system pressure, the cap can be unthreaded to examine the valve and valve seat areas for debris which can become trapped and cause breakage of system pressure during normal operation. The vacuum breaker is not repairable.

# spirax sarco

## Combination Vacuum Breaker/Balanced Pressure Thermostatic Air Vent VB-VS

### Description

The VB-VS Vacuum Breaker/Air Vent is designed for use on steam systems to remove air and other non-condensable gases, which may impair heat transfer during start-up and normal operation, and admit air when system drops in vacuum.

11	Elbow	Cast Iron	
12	Nipple	Steel	
13	VB-14	See TIS 4.103 for material data	

### Typical Applications

For installation at end of all steam mains and headers, on all steam equipment such as air coils, heat exchangers, autoclaves, sterilizers, platen presses, rotating cylinders, jacketed kettles, laundry equipment and reboilers.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
 In the interests of development and improvement of the product, we reserve the right to change the specification. TI-4-107-US 9.14

# Combination Vacuum Breaker/Balanced Pressure Thermostatic Air Vent VB-VS

## Spare Parts

Cap Gasket	A
VB-14	B
Element Set	C, D, E, F

### Note

See VS-204 for Cap Gasket and Element Set in Spares book.

## Installation

The VB-VS should be positioned at the high point of the piping system or equipment or where air collects and vacuum needs to be broken. The VB-VS must be piped in a vertical position so only air and steam surround the thermostatic bellows and vacuum breaker. The discharge can be hot and wet. The outlet should be piped to a safe place. An isolation valve should be placed on the inlet side of the VB-VS.

## Air Capacity (discharge to atmosphere)

SCFM cubic feet per minute at standard conditions of 14.7 psia at 60°F.  
For dm<sup>3</sup>/s multiply by .4719

## Maintenance

This product can be maintained without disturbing the inlet piping connections. Complete isolation is required before any servicing is performed. The vent must be cooled down to prevent over-expansion of the thermostat and oil prevent steam from escaping from the unit which could burn the operator.

The VB-VS should be disassembled periodically for inspection and cleaning of the valve head and seat. Worn or damaged parts should be replaced.

Complete Installation and Maintenance Instructions are given in IM-4-107.

## Packless Radiator Supply Valve RV Series

The RV Series are packless, non-rising stem series brass radiator valves for steam and liquid services, available in angle pattern and straight connections.

<b>Model</b>	RV
<b>Sizes</b>	1/2" to 1-1/2"
<b>Connections</b>	Union /Threaded
<b>Construction</b>	Brass
<b>Options</b>	Lock Shields Vented Bypass Extension Stem Assembly

### Materials

No.	Part	Material	
1	Handle Screw	Yellow Brass	ASTM B-16
2	Valve Bonnet	Red Brass	ASTM B-62

## LCV1 Bronze Lift Check Valve

### Description

The LCV1 is a bronze lift check valve which is installed in horizontal lines to prevent reverse flow.

### Sizes and pipe connections

1/2", 3/4", 1", 1-1/4", 1-1/2", 2" and 3".  
Screwed NPT

### Limiting conditions

PMA - Maximum allowable pressure 200 psig  
TMA - Maximum allowable temperature 500°F  
Maximum cold hydraulic test pressure 406 psig

### Operating range

The product must not be used in this region

### Cv values

Size	1/2"	3/4"	1"	1-1/4"	1-1/2"	2"	3"
Cv	2.2	5.0	9.9	13.9	22.0	36.0	80.0

### Opening pressures in inches of water

Size	1/2"	3/4"	1"	1-1/4"	1-1/2"	2"
Without springs						
With springs	2.5	3.0	2.6	2.9	2.9	2.8

With springs fitted the opening pressure is the same as the spring strength.

### Materials

No	Part	Material
1	Body	Bronze
2	Cone	Brass
3	Cap	Brass
4*	Spring	Stainless steel

\* Not illustrated

### Installation

Always install with the flow in the direction as indicated on the body.

### How to order

1/2" NPT Spirax Sarco LCV1 lift check valve.

### Dimensions (approximate) in inches and lbs.

Size	A	B	C	D
1/2"	2.1	1.8	0.7	1.4
3/4"	2.8	2.3	0.8	1.6
1"	3.4	2.8	1.1	2.2

## LCV3, LCV4, LCV6 and LCV7 Lift Check Valves

### Description

The LCV3, LCV4, LCV6 and LCV7 lift check valves are designed in accordance with EN 12516 and **ASME B16.34** to prevent reverse flow in horizontal pipeline installations. The design of these valves allows them to be easily serviced without removing the valve from the pipeline - See Spare parts.

### Available types:

- LCV3** Cast iron bodied with stainless steel internals.
- LCV4** Cast steel bodied with stainless steel internals.
- LCV6** Stainless steel bodied with stainless steel internals.
- LCV7** SG iron bodied with stainless steel internals.

### Optional for the LCV4:

High temperature bolting (stainless steel A2-70).

### Standards

These products fully comply with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the **CE** mark when so required.

### Standard shut-off

This range of lift check valves conform to EN 12266-1: 2003 Rate F.

### Certification

With the exception of the LCV3 these products are available with certification to EN 10204 3.1. **Note:** All certification / inspection requirements must be stated at the time of order placement.

## Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P029-17) supplied with the product.

### Installation note:

Always install the lift check valve horizontally with the flow in the direction indicated on the body.

### Disposal

These products are recyclable. No ecological hazard is anticipated with the disposal of these products, providing due care is taken.

## How to order

**Example:** 1 off Spirax Sarco DN15 LCV4 lift check valve having flanged EN 1092 PN40 connections.

## Spare parts

The spare parts available are shown in solid outline. Parts drawn in broken line are not supplied as spares.

### Available spares

LCV Gaskets kit (Cover gasket and seat gasket) **Spare 1**

LCV Internals kit (Cover gasket, seat gasket, spring, disc and seat) **Spare 2**

### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the size and type of trap. Always order spares by using the description of the LCV and Spare 1 or Spare 2.

**Example:** 1 off LCV Internals kit – Spare 2, for a Spirax Sarco DN15 LCV4 lift check valve having flanged EN 1092 PN40 connections.

## DCV 4 Wafer Check Valve

The DCV 4 Wafer Check Valve is designed to be fitted between ANSI flanges. It is suitable for use on a wide range of fluids for applications in process lines, hot water systems, steam and condensate systems.

Model	DCV 4
<b>Sizes</b>	1/2", 3/4", 1", 1-1/2", 2", 3", 4"
<b>Connections</b>	ANSI 150 or 300
<b>Construction</b>	Austenitic Stainless Steel
<b>Standard Internals</b>	Standard Disk: Metal - Metal Seat Standard Spring: Stainless Steel
<b>Soft Seat Options</b>	Viton (for oils & gases): temp. limits: -5°F to +482°F (-15°C to +250°C) EPDM (for water): temp. limits: -58°F to +302°F (-50°C to +150°C)
<b>Spring Options</b>	high temperature nimonic or supplied without spring

### LIMITING OPERATING CONDITIONS

Maximum Working Pressure (ANSI 300)	725 psig (50 barg)
Maximum Working Temperature (Standard Spring)	752°F (400°C)
Maximum Working Temperature (High Temperature Spring)	752°F (400°C)
Minimum Working Temperature (Standard Spring)	-58°F (-50°C)
Maximum Allowable Working Pressure	1102 psig (76 barg)

E, C, D — Standard spring  
A, B, D — Nimonic spring without spring  
The product must not be used in this region.

### OPENING PRESSURES

Differential pressures with Zero Flow (in psi and mbar)

Flow	Size						
	1/2"	3/4"	1"	1-1/2"	2"	3"	4"
▲	0.36 25	0.36 25	0.36 25	0.41 28	0.42 29	0.45 31	0.48 33
▶	0.33 22.5	0.33 22.5	0.33 22.5	0.35 24	0.36 24.5	0.37 25.5	0.38 26.5
▼	0.29 20	0.29 20	0.29 20	0.29 20	0.29 20	0.29 20	0.29 20

Where lowest opening pressures are required, valves without springs can be installed in vertical pipes with bottom-to-top flow.

Without spring

▲	0.04 2.5	0.04 2.5	0.04 2.5	0.06 4	0.07 4.5	0.08 5.5	0.09 6.5
---	-------------	-------------	-------------	-----------	-------------	-------------	-------------

### STANDARDS

Designed and manufactured in accordance with BS 7438.

### Standard

Standard valves conform to DIN 3230 Part 3, BN 2. Valves conforming to DIN 3230 Part 3, BO3 available on request. Soft seated versions meet DIN 3230 Part 3 BN1 and BO1 provided a differential pressure exists.

### CONSTRUCTION MATERIALS

No.	Part	Material	
1	Body	Austenitic Stainless Steel	ASTM A351 CF3M
2	Disc	Austenitic Stainless Steel	BS 1449 316 S 11
3	Spring Retainer	Austenitic Stainless Steel	BS 1449 316 S 11
4	Standard Spring	Austenitic Stainless Steel	BS2056 316 S 42
	High Temperature Spring	Nickel alloy	Nimonic 90

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

# DCV 4 Wafer Check Valve

## PRESSURE LOSS DIAGRAM

Pressure loss diagram with open valve at 68°F (20°C). The values indicated are applicable to spring loaded valves with horizontal flow. With vertical flow, insignificant deviations occur only within the range of partial opening. The curves given in the chart are valid for water at 68°F (20°C). To determine the pressure drop for other fluids, the equivalent water volume flowrate must be calculated and used in the graph.

$$V_w = \sqrt{S.G.} \times V$$

$V_w$  Equivalent water volume flow in GPM  
 S.G. Specific Gravity  
 $V$  Volume of fluid GPM

Pressure loss information for steam, compressed air, and gases is available from Spirax Sarco.

### INSTALLATION

DCV 4 Wafer Check Valves must be fitted in accordance with the direction of flow arrow indicating correct fluid flow direction. When fitted with a spring they can be installed in any plane. When supplied without a spring these must be fitted in a vertical flow line with the flow from bottom to top.

**Note** Disc Check valves are not suitable for use where heavily pulsating flow exists, such as close to a compressor.

### HOW TO SPECIFY

Spirax Sarco DCV 4 Wafer Check Valve for fitting between ANSI 300 flanges.

- With**
- "N" — Have a nimon spring fitted for operating temperatures up to 752°F
  - "W" — Have no return spring fitted. These must be fitted with flow from bottom to top in a vertical line.
  - "T" — Valves tested to DIN 3230 Part 3, BO3.

- With**
- "V" — Have a Viton soft seating face—temperature limit 482°F
  - "E" — Have an EPDM soft seating face—temperature limit 302°F.

### HOW TO ORDER

1-1/2" Spirax Sarco DCV 4 Wafer Check Valve, steam at 400 psi, Austenitic stainless steel body to fit between ANSI 300 flanges.

## DCV 10 Stainless Steel Disc Check Valve for use with Automatic Pump Traps

### Description

The DCV10 disc check valve has been designed specifically for use with Spirax Sarco's APT14HC and APT14SHC automatic pump-traps. The check valve ensures the correct flow of condensate and other suitable fluids through these condensate pumps and also prevents reverse flow.

**Standards** - Designed in accordance with BS EN 14341:2006. This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC.

**Shut-off** - Shut-off conforms to EN 12266-1:2003 Rate F.

**Certification** - This product is available with certification to EN 10204 3.1. **Note:** All certification/inspection requirements must be stated at the time of order placement.

### Pressure/temperature limits

The product **must not** be used in this region.

**A - B** For fitting between Class 150 and Class 300 flanges.

**A - C** For fitting between EN 1092 PN16 and JIS/KS 10K flanges.

Body design condition		PN25 or Class 300	
PMA	Maximum allowable pressure	PN25	363 psig @ 32°F
		Class 300	719 psig @ 32°F
TMA	Maximum allowable temperature	PN25	392°F @ 250 psig
		Class 300	392°F @ 500 psig
Minimum allowable temperature		-10°C	
PMO	Maximum operating pressure	PN25	363 psig @ 32°F
		Class 300	718 psig @ 32°F
TMO	Maximum operating temperature	PN25	392°F @ 250 psig
		Class 300	392°F @ 500 psig
Temperature limits		14°F to 392°F	
Minimum operating temperature		14°F	
Designed for a maximum cold hydraulic test pressure of:		PN25	544 psig
		Class 300	1079 psig

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.

In the interests of development and improvement of the product, we reserve the right to change the specification. TI-P601-32-US 10.14

### Sizes and pipe connections

The PN25 design is available in sizes 1½" to fit between EN 1092 PN16 and JIS/KS 10K flanges.

**Please note:** The Class 300 design is available in size 1½" only to fit between ASME B 16.5 (ANSI) Class 150 and Class 300 flanges.

### Materials

No.	Part	Material	
1	Body	PN	Austenitic stainless steel 1.4308

## Operation

The DCV10 is opened by the pressure and flow of condensate and is closed by the pressure of the spring when flow ceases and before reverse flow occurs.

## Pressure loss diagram

Pressure loss diagram with open valve at 68°F (20°C).

The values indicated are applicable with to spring loaded valves with horizontal flow. With vertical flow, insignificant deviations occur only within the range of partial opening.

The curves given in the chart are valid for water at 68°F (20°C). To determine the pressure drop for other fluids, the equivalent water volume flowrate must be calculated and used in the graph.

$$V_w = \sqrt{S.G.} \times V$$

$V_w$  = Equivalent water volume flow in GPM

S.G. = Specific Gravity

$V$  = Volume of fluid GPM

Pressure loss information for steam, compressed air and gases is available from Spirax Sarco.

## Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P601-33) supplied with the product.

### Installation note:

The DCV10 must be installed close coupled to the pump. It can be fitted in either a horizontal or vertical line in accordance with the direction of flow arrow on the body. **Note:** Flanges, bolts (or studs), nuts and gaskets to be supplied by the installer.

## How to order

**Example:** 1 Spirax Sarco 1 1/2" DCV10 stainless steel check valve to fit between ANSI 150 flanges for use with an APT 14 HC pump.

1 1/2"	3.7	3.4	1.8	1.9	1.8	1.6	1.9	1.8

## DCV41

# Austenitic Stainless Steel Disc Check Valve

### Description

DCV41 is an austenitic stainless steel disc check valve with screwed or socket weld end connections. Its function is to prevent reverse flow on a wide variety of fluids for applications in process lines, hot water systems, steam and condensate systems. For oils and gases, a Viton seat is available and for water an EPDM seat is available. Soft seat versions provide a zero leakage rate or bubble tight shut-off, i.e. they meet DIN 3230 BN1 and DIN 3230 BO1, provided a differential pressure exists (**Note:** Soft seat options are not available with socket weld ends). The shut-off of the standard valve conforms to DIN 3230 BN2. When a heavy duty spring is installed with an EPDM seat, the valve is suitable for boiler feedwater check applications.

A high temperature spring version is available to operate at 752°F. (400°C)

### Sizes and pipe connections

1/2", 3/4", 1", Screwed NPT to ANSI B 1.20.1 and (screwed BSP to BS 21 female taper) socket weld to ANSI B 16.11 Class 3000.

### Optional extras

Heavy duty springs 10 psi (700 mbar) opening pressure for boiler feed applications.

High temperature spring.

Viton soft seals for water applications - screwed connections only

EPDM soft seals for water applications - screwed connections only.

### Limiting conditions

Maximum body design condition	PN50
PMO - Maximum operating pressure	(50 barg) 725 psig
	With metal seat and standard spring (300°C) 572°F
TMO - Maximum Operating Temperature	With metal seat and high temperature spring (400°C) 752°F
	Without spring (400°C) 752°F
	Viton seat (250°C) 482°F
	EPDM seat (150°C) 302°F
Minimum operating temperature	With metal seat (-29°C) -20°F
	With viton seat (-15 to +250°C) 5°F to 482°F
	With EPDM seat (-29 to +250°C) -20°F to 482°F

Designed for a maximum cold hydraulic test pressure of 1102 psig (76 barg)

**Note:** Special testing to allow lower temperature operation can be provided at extra cost. Consult Spirax Sarco.

### Operating range

This product must not be used in this region.  
 A - B - D High temperature spring and without spring  
 E - C - D Standard spring

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.

In the interests of development and improvement of the product, we reserve the right to change the specification. TI-P601-18-US 06.02

Soft seat option (screwed connections only)

### Certification

The product is available with certification to EN 10204 3.1.B for body as standard.

### Standards

Designed and manufactured in accordance with BS 7438.

### Standard shut-off

Standard valves conform to DIN 3230 BN2.

Soft seated versions meet DIN 3230 BN1 and DIN 3230 BO1 provided a differential pressure exists.

### Operation

Disc check valves are opened by the pressure of the fluid and closed by the spring as soon as the flow ceases and before the reverse flow occurs.

### Materials

1 Body	Austenitic stainless steel	ASTM A351 CF 3M
2 Seat	Austenitic stainless steel	ASTM A351 CF3M
3 Disc	Austenitic stainless steel	BS 1449 316 S11
Standard spring	Austenitic stainless steel	BS 2056 316 S42

1"	2.6 (67)	2.7 (68)	2.0 (50)	1.1 (0.5)

## How to order

**Example:** 1 Spirax Sarco DCV41 in an austenitic stainless steel body having 1/2" screwed NPT connections and complete with certification to EN 10204 3.1.B for the body.

## Pressure loss diagram

Pressure loss diagram with open valve at 68°F (20°C). The valves indicated are applicable to spring loaded valves with horizontal flow. With vertical flow, insignificant deviations occur only within the range of partial opening. The curves given in the chart are valid for water at 68°F (20°C). To determine the pressure for other fluids the equivalent water volume flow rate must be calculated and used in the graph.

$$V_w = \sqrt{S.G.} \times V$$

V<sub>w</sub> = Equivalent water volume flow in GPM

S.G. = Specific Gravity

V = Volume of fluid GPM

Pressure loss information for steam, compressed air, and gases is available from Spirax Sarco.

## Installation

For more detailed installation and maintenance instructions please refer to IM-P601-19 which is supplied with the product. The DCV41 must be fitted in accordance with the direction of flow arrow indicating correct fluid flow direction. When fitted with a spring, they can be installed in any plane. When supplied without spring, they must be fitted in a vertical flow line with the flow from bottom-to-top.

**Note:** Disc check valves are non-maintainable (no spares are available). Disc check valves are not suitable for use where heavily pulsating flow exists, such as close to a compressor.

Various options are denoted by a marking on the valve body: -

- 'N' -High temperature spring      -Standard metal seat
- 'W' -Without spring                -Standard metal seat
- 'H' -Heavy duty spring            -Standard metal seat
- 'V' -Standard spring                -Viton seat
- 'E' -Standard spring                -EPDM seat

**No identification** indicates a standard spring with a metal disc.

## Disposal

If a product which contains a Viton component has been subjected to a temperature approaching 599°F (315°C) or higher, then it may have decomposed and formed hydrofluoric acid. Avoid skin contact and inhalation of any fumes as the acid will cause deep skin burns and damage to the respiratory system. Viton must be disposed of in a recognized manner as stated in the Installation and Maintenance Instructions (IM-P601-19). No other ecological hazard is anticipated with the disposal of this product providing due care is taken.

# spirax sarco

## SDCV44 Austenitic Stainless Steel Split Disc Check Valve

### Description

A range of austenitic stainless steel split disc check valves in a wafer pattern suitable for fitting between ANSI Class 150 and class 300 flanges. Their function is to prevent reverse flow on a wide variety of fluids for applications in process lines, hot water systems, steam and condensate systems. The face-to-face dimension of the SDCV44 conforms to API 594. As standard the valve has a metal-to-metal seat. 4" SDCV44 Patent Pending.

### Size and pipe connections

2" (DN50), 3" (DN80), 4" (DN100)  
Suitable for installation between the following flanges:  
ANSI B 16.5 class 150, 300.

### Limiting conditions

Maximum Body Design Condition	
PMA - Maximum allowable pressure	720 psig (49.6 barg)
TMA - Maximum allowable temperature	650°F (343.3°C)
PMO - Maximum operating pressure	720 psig (49.6 barg)
TMO - Maximum Metal seat operating temperature	650°F (343.5°C)
Minimum operating Metal seat temperature	-20°F (-28.88°C)
Designed for a maximum Cold hydraulic test pressure	1100 psig (137.9 barg)

**Note:** Limited to flange rating

### Operating range

■ The product **must not** be used in this region.

A - B ANSI 150 flanges

A - C ANSI 300 flanges

### Materials

No.	Part	Material	
1	Body	Austenitic stainless steel	ASTM A351 CF8M
2	Plate	Austenitic stainless steel	ASTM A351 CF8M
3	Hinge/stop pin	Austenitic stainless steel	AISI 316
4	Spring	Nickel alloy	Inconel-718
5	Retainer plug	Austenitic stainless steel	AISI 316

### Certification

The product is available with certification to EN 10204 3.1.B for the body at extra cost. Certification must be specified at the time of order placement.

### Standard shut-off

Valve shut off to API 598 available on request.

### Operation

A split disc check valve is opened by the pressure of the fluid and closed by the spring as soon as the flow ceases and before the reverse flow occurs.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.

## Steam Injectors IN15, IN25M, IN40M

### Steam Injectors Type IN are:

- All stainless steel
- Ideal for boiler feedtank heating of water and other fluids
- Heats, mixes and circulates- no moving parts
- Compact design- minimizes noise and vibration

Model	IN15	IN25M	IN40M
Sizes	1/2"	1"	1-1/2"
Connections	NPT	NPT male & Butt-weld	
Construction	Austenitic Stainless Steel grade 316L		

### Description

Spirax Sarco steam injectors use steam to raise the temperature of water or other liquids. They work by using a jet of steam to draw in the liquid through radial ports, mix it, and distribute the heated liquid throughout the tank vessel. The circulation induced by the injector ensures thorough mixing and avoids temperature stratification. Three sizes of injectors are available to suit a wide range of applications.

The smallest, the IN15, has a male and a female thread for direct mounting to a tank wall from the outside, or to pipework within the tank.

The IN25M and IN40M are available in male thread or butt-weld form and are fitted to pipework in the tank, or to a tank wall connection.

For higher capacities, two or more injectors may be mounted in parallel.

### Limiting Operating Conditions

#### Body Design Rating

350 psig (PN25)

#### Maximum Saturated Steam Conditions

250 psig at 400°F  
(17 barg 207°C)

#### Maximum Heated Liquid Temperature

190°F (90°C)

### Available Types

Steam injectors for horizontal installation are available as type IN15, IN25M and IN40M. The choice of injector depends on the flowrate of steam required to heat the liquid. The IN15 can be fitted to the end of the steam supply pipework or directly through the tank weld using a female threaded connection.

Dimensions (approximate) in inches and (millimeters)				
Type	A	B	C	Weight (lb kg)
IN15	1/2"	8.2 (205)	1.1 28	.8 (.4)
IN25M	1"	3.4 (84)	2.8 (71)	2.0 (.8)
IN40M	1-1/2"	4.6 (115)	3.5 (88)	3.2 (1.6)

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.

In the interests of development and improvement of the product, we reserve the right to change the specification. TI-10-1430-US 04.01

### IN40M

(available screwed or butt-weld)

### IN25M

(available screwed or butt-weld)

### IN15

### Capacities -selecting a steam injector

The choice of steam injector depends on the flowrate of steam required to heat the liquid. The table below shows steam injector capacities in lb/h of injected steam when heating tanks are vented to atmosphere, and are up to 10 feet deep. The choice of control valve can affect the steam capacity. For higher capacities use two or more injectors in parallel.

	Injector type	IN15	IN25M	IN40M
	Steam pressure psig	Saturated steam capacity lb/h		
recommended steam pressures for quiet operation	15	44	297	880
	30	105	385	1226
	45	145	616	1771
	60	185	770	2134
	75	224	920	2475
	90	264	1100	2849
	105	303	1276	3179
	120	343	1408	3564
	135	382	1540	4004
	150	422	1683	4290
	165	462	1826	4950
	180	501	1980	5214
	195	541	2145	5709
	210	580	2299	5962
	225	620	2409	6193
240	661	2574	6743	
255	699	2697	7040	

Intermediate values may be obtained by linear interpolation. For higher capacities use 2 or more injectors in parallel.

$$* \text{ Steam pressure at inlet of injector} = \text{ Steam supply pressure to control valve} - \text{ Pressure drop across control valve}$$

### C<sub>v</sub> values

Injector type	IN15	IN25M	IN40M
C <sub>v</sub> 1.81	10.7	16.9	

### Sample Specification

Steam injectors shall be all 316L stainless steel, with radial inlet ports and full length discharge nozzle.

# Steam Injectors IN15, IN25M, IN40M

## Self-Acting Control System

## Installation

**WARNING:-** Your attention is drawn to Safety Information Leaflet IM GCM-10. Full Installation and Maintenance Instructions are provided with each unit. The reference notes below do not contain sufficient information to install the product safely, and any attempt to do so may be hazardous.

The injectors are installed at a low level in a tank, ideally along the center line, and discharging horizontally along the length. Pipework may be routed inside or outside the tank wall. We recommend the use of a suitable thread locking compound on all threaded connections.

Use the same size pipe as the injector, i.e. 1" pipe for IN25M. Pipe sizes for multiple injector installations are as follows:-

No. of injectors	Type	Minimum Pipe Size
2	IN15	3/4"
2	IN40M	2-1/2"
3	IN40M	3"

Allow a minimum of 6" between the injector(s) and the sides and bottom of the tank, and as much length as possible between the injector outlet and the end of the tank. See IMI for minimum limits. Space multiple injectors equally across the tank width.

200	470	900	-	-	-	5670	-	10,445

Each INS system also includes a valve size model 10 ball valve and type CT strainer, a stainless steel well, and VB14 vacuum breaker. Full technical details for each of the products contained in the INS systems are available upon request.

## Type INS Steam Injector Systems

The IN injectors are also available as part of a steam injection system, type INS. The table to the left covers eight preferred INS steam injection systems available from Spirax Sarco.

## Estimating Steam Flow by Calculation

The following formulas can be used to calculate an approximate steam load:

For general heating applications -

$$Q = \frac{W \times C_p \times \Delta T}{1000 \times t}$$

For boiler feedtanks -

$$Q = \frac{G \times \Delta T}{1000}$$

Q = Steam load (lb/h)

W = Mass of liquid (lb)

G = Feedwater flow rate (lb/h) Note: 1 Boiler hp = 34.5 lb/h

C<sub>p</sub> = Specific heat of liquid (Btu/lb°F)

ΔT = Temperature rise (°F)

t = heating time (hours)

## Sample Specification

Steam Injector system shall include an isolation valve, Y type strainer, self acting control system with stainless steel well, vacuum breaker and 316L grade stainless steel injector.

## Installation

Spirax Sarco steam injectors are designed to operate with the minimum of noise provided installation is correct. For full details refer to the Installation and Maintenance Instructions supplied with the product.

## Maintenance

Injectors require no maintenance. We recommend an annual inspection of the steam supply pipework and injector to check that the fittings are securely fastened. All other system components should be maintained in accordance with the relevant Installation and Maintenance Instructions which are available upon request.

## Sample Specification

Moisture Separator shall be of the high efficiency internal baffle type having a pressure drop that does not exceed an equivalent length of pipe. Body shall be iron with screwed or flanged connections. A screwed bottom drain shall be provided for the installation of a trap to discharge any accumulated liquid.

## Installation

Install in a horizontal pipeline with the drain directly below the line. Recommended trap is a continuous draining float operated type.

## Maintenance

The trap at the separator drain should be serviced periodically according to the manufacturer's instructions. The separator itself requires no maintenance.

# spirax sarco

## Steel Separator S4A

Moisture Separators are used to improve the quality of steam or compressed air either within the distribution system or on the supply inlet to equipment. Removal of moisture is by a series of baffles on which the suspended water droplets impinge and fall out by gravity to the drain, which must be piped to a trap.

# Steel Separator S4A

## S4A Steam Sizing Chart

### Sizing Example for Model S4A

1. Taking a steam pressure of 180 psig and flow rate of 1100 lb/h draw line A-A.
2. Draw horizontal line A-B.
3. Any separator curve that is bisected by line A-B within the shaded area will operate at near 100% efficiency.
4. Line velocity for any size can be determined by dropping a vertical line B-C (eg. 60 ft/s for 1-1/4" unit).
5. Pressure drop is determined by plotting lines C-D and A-D. The point of intersection is the pressure drop across the separator, ie: 0.5 psi.
6. Separators should be selected on the basis of the best compromise between line size, velocity and pressure drop for each application.

The shaded area denotes recommended selection for better than 99% separation efficiency.

### S4A Separator Flow Velocity & Pressure Drop for compressed Air

Note: Any Separator curve that is bisected within the shaded area will operate at near 100% efficiency.

### Sample Specification

Moisture Separator shall be of the high efficiency internal baffle type having a pressure drop that does not exceed an equivalent length of pipe. Separator shall be of steel construction in accordance with Section VIII, Division I of the ASME Boiler and Pressure Vessel Code. ASME Code Stamped for maximum working pressures of 150, 300, or 600 psig. A screwed bottom drain connection shall be provided for the installation of a trap to discharge accumulated liquid. A Spirax Sarco Float Operated Drain Trap and "Y" Type Strainer shall be installed on the drain connection.

# spirax sarco

## Steel Separator 8" to 18" S4A

Moisture Separators are used to improve the quality of steam or compressed air either within the distribution system or on the supply inlet to equipment. Removal of moisture is by a series of baffles on which the suspended water droplets impinge and fall out by gravity to the drain, which must be piped to a trap.

*Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.  
In the interests of development and improvement of the product, we reserve the right to change the specification.*

## Sample Specification

Moisture Separator shall be of the high efficiency internal baffle type having a pressure drop that does not exceed an equivalent length of pipe. Separator shall be of steel construction in accordance with Section VIII, Division I of the ASME Boiler and Pressure Vessel Code. ASME Code Stamped for maximum working pressures of 150, 300, or 600 psig. A screwed bottom drain connection shall be provided for the installation of a trap to discharge accumulated liquid. A Spirax Sarco Float Operated Drain Trap and "Y" Type Strainer shall be installed on the drain connection.

# spirax sarco

## S13 SG Iron Separator (Flanged)

### Description

The S13 separator is an SG iron baffle type separator used for the removal of entrained liquids in steam, compressed air or gas systems. The fitting of insulation jackets will increase the performance of the separator.

### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC.

### Certification

This product is available with a manufacturers' Typical Test Report.  
**Note:** All certification/inspection requirements must be stated at the time of order placement.

### Sizes and pipe connections

DN40, DN50, DN65, DN80, DN100, DN125, DN150 and DN200.  
 Flanged EN 1092 PN16 and PN25 with screwed BSP drain.  
 Flanged JIS/KS 10K with screwed BSP drain.  
 Flanged JIS/KS 20K with screwed BSP drain - DN40, DN50, DN65 and DN200 only.  
 Flanged ANSI 150 - DN200 (8") only.

### Materials

No.	Part	Material	
1	Body	SG iron	DIN 1693 GGG40 ASTM A395
2	Plug	Carbon steel	1.0460 (C22.8)
3	Gasket	Reinforced exfoliated graphite	
4	Drain reducing bush	Forged carbon steel	ASTM A105

### Pressure/temperature limits (ISO 6552)

The product **must not** be used in this region.

- A - A Flanged JIS 10K
- B - B Flanged EN 1092 PN16
- B - C - D Flanged EN 1092 PN25 and JIS 20K
- E - F Flanged ANSI 150

**Note:** S13 flanged type separators may be supplied with a lower pressure rating than that cast into the body. Reference should be made to the appropriate operating chart to determine the actual product limitations.

Body design conditions	PN25	
PMA Maximum allowable pressure	362psig@212°F (25bar@100°C)	
TMA Maximum allowable temperature	662°F@203psig (350°C@14bar g)	
Minimum allowable temperature	14°F(-10°C)	
PMO Maximum operating pressure for saturated steam service	JIS/KS 10K	178psig (12.3bar)
	PN16	199psig (13.7bar)
	PN25 and JIS/KS 20K	309psig (21.3bar)
	ANSI 150	200psig (13.8bar)
TMO Maximum operating temperature	662°F@203psig (350°C@14bar)	
Minimum operating temperature	14°F (-10°C)	
<b>Note:</b> For lower operating temperatures consult Spirax Sarco		
Designed for a maximum cold hydraulic test pressure of:	JIS/KS 10K	296psig (20.4bar)
	PN16	348psig (24.0bar)
	PN25 and JIS/KS 20K	544psig (37.5bar)
	ANSI 150	375psig (25.9bar)

	DN125	60 A/F M72	190 - 210
	DN150	60 A/F M72	190 - 210
	DN200	60 A/F M72	190 - 210

## Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P023-55) supplied with the product.

### Installation note:

Install in a horizontal pipeline with the drain directly below. **Note:** To ensure that any separated liquid is drained away quickly, a suitable liquid drainer or steam trap must be connected to the drain connection 'E' - consult Spirax Sarco for further details.

### Disposal

This product is recyclable. No ecological hazard is anticipated with the disposal of this product, providing due care is taken.

### How to order

**Example:** 1 off DN50 Spirax Sarco S13 separator with SG iron body having flanged EN 1092 PN16 connections.

# spirax sarco

## S5 Carbon Steel Separator

### Description

The S5 is a carbon steel baffle type separator used for the removal of entrained liquids in steam, compressed air and gas systems.

### Optional extras

Insulation jackets are available which will increase the performance of the separator, (see TI-P138-01).

### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the CE mark when so required.

### Certification

This product is available with certification to EN 10204 3.1. Note All certification/inspection requirements must be stated at the time of order placement.

### Connections

½", ¾", 1", 1¼", 1½" and 2"

Screwed NPT, butt weld, socket weld.

Flanged BS ANSI Class 150 or 300 with screwed NPT drain and air vent.

### Pressure-temperature limits

The product must not be used in this region.

\*PMO Maximum operating pressure for saturated steam

A - A Flanged ANSI Class 150

B - B Flanged ANSI Class 300, screwed NPT, socket weld and butt weld

For full details see the Installation and Maintenance Instructions (IM-P023-55) supplied with the product.

Install in a horizontal pipeline with the drain directly below. To ensure that any separated liquid is drained quickly, a suitable steam trap/liquid drainer must be connected to the drain connection. For those steam systems where air can be present, air can collect in the upper portion of the separator. In this situation a suitable air vent should be connected to the air vent connection. If an air vent is not being fitted then the connection must have the plastic transit protection plug removed and must have a carbon steel class 3000 lb plug fitted.

The product is recyclable. No ecological hazard is anticipated with disposal providing due care is taken.

## S6 Austenitic Stainless Steel Separator

### Description

The S6 is an austenitic stainless steel (316L) baffle type separator used for the removal of entrained liquids in steam, compressed air and gas systems.

### Optional extras

Insulation jackets are available which will increase the performance of the separator, (see TI-P138-01).

### Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the CE mark when so required.

### Certification

This product is available with certification to EN 10204 3.1. Note All certification/inspection requirements must be stated at the time of order placement.

### Available options

1/2", 3/4", 1", 1 1/4", 1 1/2" and 2"

Screwed BSP or NPT, butt weld, socket weld.

Flanged ANSI Class 150 or 300 with screwed NPT drain and air vent.

### Pressure-temperature limits

The product must not be used in this region.

## Sizing Chart for S5 & S6 Separators

### Steam Sizing Chart

#### Sizing Example

1. Taking a steam pressure of 180 psig and flow rate of 1100 lb/h draw line A-A.
2. Draw horizontal line A-B.
3. Any separator curve that is bisected by line A-B within the shaded area will operate at near 100% efficiency.
4. Line velocity for any size can be determined by dropping a vertical line B-C (eg. 60 ft/s for 1-1/4" unit).
5. Pressure drop is determined by plotting lines C-D and A-D. The point of intersection is the pressure drop across the separator, ie: 0.5 psi.
6. Separators should be selected on the basis of the best compromise between line size, velocity and pressure drop for each application.

The shaded area denotes recommended selection for better than 99% separation efficiency.

Steam pressure psi (approx.)

Flow velocity (ft/s)

Note: Any Separator curve that is bisected within the shaded area will operate at near 100% efficiency.

Pressure drop across separator psi (approx.)

# Sizing Chart for S5 & S6 Separators

## Separator Flow Velocity & Pressure Drop for compressed Air

Note: Any Separator curve that is bisected within the shaded area will operate at near 100% efficiency.

## Sample Specification

Sight Glass shall be single/double type having brass body with screwed connections and removable toughened glass windows.

## Installation

When installed on the outlet of a steam trap having a blast action discharge, the sight glass should be positioned at least 3 feet (1 meter) from trap outlet.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation of the sight glass is required before any servicing is performed.

The sight glass should be disassembled as necessary for cleaning of the glass. The glass should be examined carefully for any evidence of erosion or chemical attack.

Worn or damaged parts should be replaced using a complete Repair Kit comprised of toughened glass and gaskets.

## Spare Parts

Set of Windows & Gaskets/Washers A, B, C

Set of Gaskets/Washers B, C

Spare Parts are common to all sizes.  
Available spare parts are shown in heavy outline. Parts drawn in broken line are not supplied as spares.

### Typical Applications

On any liquid system where indication of flow through the pipe is required, along with the prevention of liquid backflow. Applications such as water lines, outlet discharge of steam traps and discharge of pumps.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-7-101-US 7.04

# Sight Check (Combined Sight Glass & Check Valve)

## Sample Specification

Sight Check valves shall have a borosilicate viewing glass and internal ball check valve. The ball check valve shall be situated so as to provide a visual indication of flow.

## Installation

When installed on the outlet of a steam trap having a blast action discharge, the sight glass should be positioned at least 3 feet (1 meter) from the trap outlet. This is to ensure the glass tube is not subjected to thermal shock. The sight check can be installed in horizontal or vertical pipework, provided that the ball check can close by gravity.

**Warning:** Since condensate can, in some cases, act as a solvent on glass, it is advisable to check the tube periodically for thinning and to take reasonable steps to protect people from injury, should the glass break.

## Maintenance

This product can be maintained without disturbing the piping connections. Complete isolation of the sight check is required before any servicing is performed.

The sight check should be disassembled periodically for inspection and cleaning of the glass, ball check and seat. Worn or damaged parts should be replaced as required.

**Complete installation and maintenance instructions are given in the IMI sheet, which accompanies the product.**

## Vent Head Type VH

Spirax Sarco Vent Heads type VH are designed for fitting to vertical open-ended steam vent pipes. The vent head will discharge dry steam at low velocity safely to atmosphere protecting personnel from injury and buildings from material damage. The vent head incorporates an internal baffle to separate entrained water from the steam and discharges separately through the drain connection.

Model	VH 2S-VH 3S	VH 3-VH 12
Sizes	2" and 3"	3" - 12"
Vent Connection	NPT	ANSI 150
Drain Connection	NPT	
Construction	Stainless Steel	Stainless Steel Flange - Plated Steel

### Typical Applications

Vent heads type VH are ideal for condensate tanks, blowdown vessels, boiler feedtanks, deaerators, hot water storage tanks, etc. Caution: Vent heads are not recommended for safety valve outlets.

Vent Head type VH 3 – VH 12 shown

### Available Types

Vent heads are available as types VH 2S, 3S, 3, 4, 6, 8, 10 and 12. The vent head should be selected so that it is the same nominal size as the vent pipe, when sized for a maximum velocity of 3500 ft/min at atmospheric pressure.

### Materials

300 grade austenitic stainless steel except the flange (VH 3–VH 12 only) which is electroplated carbon steel

### Sample Specification

Vent head shall be baffle type, manufactured in stainless steel with threaded drain connection. Flanged units shall have a lap type flange to allow rotation and easy orientation of the drain connection during installation.

### Installation

The lap joint flange allows rotation and easy orientation of the drain connection. The drain should be piped to a safe position. An annual inspection is recommended to ensure that the outlet drain connection is unobstructed.

### Dimensions (nominal) in inches and millimeters

Vent Head Type	Inlet size	Drain Size	H	W	Weight
VH 2S	2"	3/4" NPT	8.3	6.0	4.4 lb
	50		210	152	2.0 kg
VH 3S	3"	3/4" NPT	10.6	8.0	5.5 lb
	80		270	202	2.5 kg
VH 3	3"	3/4" NPT	12.0	8.6	12.0 lb
	80		305	218	5.5 kg
VH 4	4"	1" NPT	12.6	9.5	13.0 lb
	100		320	240	6.0 kg
VH 6	6"	1" NPT	15.4	13.4	29.0 lb
	150		390	340	13.0 kg
VH 8	8"	1-1/2" NPT	16.9	16.7	44.0 lb
	200		430	425	20.0 kg
VH 10	10"	1-1/2" NPT	19.5	20.7	62.0 lb
	250		495	525	28.0 kg
VH 12	12"	2" NPT	22.4	24.6	77.0 lb
	300		570	625	35.0 kg

Inlet Connections: VH 2S is screwed 2" NPT; VH3S is screwed 3" NPT  
VH 3 – VH 12 flanged to suit ANSI 150  
Flanges are the lap joint type.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only.

In the interests of development and improvement of the product, we reserve the right to change the specification. TI-10-5310-US 6.14

## Steel Pressure Gauge

### Description

Pressure gauge with 4" (100mm) diameter dial with units marked in psi as appropriate. The gauge can be supplied with either: Ring type syphon tube and cock or a 'U' type syphon tube and cock as an optional accessory.

Bourdon tube gauge, constructed in accordance with DIN 16005.

#### Available pressure range

<b>Range 1</b>	0 - 30 psi	<b>Range 2</b>	0 - 60 psi
<b>Range 3</b>	0 - 100 psi	<b>Range 4</b>	0 - 160 psi
<b>Range 5</b>	0 - 300 psi	<b>Range 6</b>	0 - 400 psi

**Note:** Other ranges are available upon request

#### Standards

The product fully complies with the requirements of the Pressure Equipment Directive 97/23/EC.

#### Certification

A certificate of conformity and test report is available as standard for this product. A calibration certificate is available by special order at extra cost. **Note:** All certificate/inspection requirements must be specified at the time of order placement.

#### Sizes and pipe connections

<b>Pressure gauge</b>		1/2" NPT
<b>Gauge cock</b>	Gauge end	1/2" NPT
	Syphon end	1/2" NPT
<b>Ring / 'U' syphon</b>	Cock end	1/2" NPT
	Process end	1/2" NPT

#### Pressure/temperature limits

Maximum design conditions	Full scale reading
PMA Maximum allowable pressure	Full scale reading
TMA Maximum allowable temperature	423°F

**Note:** Either a 'U' or a ring syphon must be fitted to achieve this.

PMO Maximum operating pressure	Range 1	30 psi
<b>Please note:</b> For compressed air and steam services the maximum operating pressure for this product is 300 psi.	Range 2	60 psi
	Range 3	100 psi
	Range 4	160 psi
	Range 5	300 psi
	TMO Maximum operating temperature	

#### Materials

Part	Material	
Case	Pressed steel	
Gauge	Glass	Snap fit perspex
	Bourdon tube	CuSh 8 (92% Cu 8% Zn)
Ring and 'U' syphon	Mild steel tube BS 1387 heavy grade	
Gauge cock	Body	Brass
	Handle	Phenolic

## Dimensions/weights (approximate) in inches and lbs

Gauge					Ring syphon						'U' syphon				
A	B	C	D	Weight	E	F	G	H	Weight Syphon	Weight Cock	J	K	L	Weight Syphon	Weight Cock
4	1.1	5.2	0.9 A/F	0.95	15.4	2.3	3.5	4	2.4	0.51	8.5	3.6	6.9	2.0	0.51

## Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P027-02) supplied with the product.

### Installation note:

As with all instrumentation, the Spirax Sarco pressure gauge is a delicate measuring device and care has to be taken in its installation and use if it is to remain reliable.

It is recommended that all gauges are fitted with a gauge cock to assist when calibration or maintenance is necessary. When used on steam or other hot gases, gauges **must** be protected from heat by the use of a 'U' syphon or ring syphon tube and gauge cock. The syphon pipe should be primed with water prior to fitting the gauge. Care should be taken if the installation is exposed to frost as gauges can burst.

### Disposal:

The product is recyclable. No ecological hazard is anticipated with the disposal of this product providing due care is taken.

## Spare parts

There are no spare parts available for Spirax Sarco pressure gauges.

## Typical uses of a 'U' syphon and gauge

### Vertical pipe

## Stainless Steel Pressure Gauge

### Description

Stainless Steel case pressure gauge with 4" diameter dial with units marked in psig and inches Hg for vacuum as appropriate. The gauge is supplied with 316 stainless steel bourdon tube. The gauge is available dry but, with a special dampening agent, giving performance like a liquid-filled gauge. Pressure gauge comes with a 1-1/2% accuracy.

### Sizes and pipe connections

**Pressure Gauge:** 1/4" NPT  
**\*Ball Valve** 1/4" NPT x 1/4" NPT  
**Syphon:** 1/4" NPT x 1/4" NPT  
 \*Valve for use w/syphon and pressure gauge. Not to be used as a stand-alone isolation valve.

### Limiting Conditions

Maximum design conditions = full scale reading.  
 Maximum design temperature 400°F  
 (Coil syphon must be fitted to achieve this)  
 Maximum service temperature, if the syphon tube is not fitted is 150°F. On applications with a service temperature above 150°F syphon tube must be fitted.  
 The pressure gauge has a standard vent plug and should be used in an indoor dry environment. Gauges with vented plugs are not weatherproof or hermetically sealed.

### Pressure ranges

Range	psig
1	0 - 30
2	0 - 60
3	0 - 100
4	0 - 160
5	0 - 200
6	0 - 30/0 Hg
7	30" Hg - 15 psig
8	30" Hg - 30 psig
9	30" Hg - 60 psig

### Materials

	Case	304 Stainless Steel
Gauge	Window	Polycarbonate
	Bourdon tube	316 Stainless Steel
Coil syphon		ASTM A-106 seamless steel/grade A
Ball valve		Bronze

### Certification

A calibration certificate is available by special order at extra cost.

### Dimensions / weights (approximate) in inches

# Stainless Steel Pressure Gauge

## Installation

As with all instrumentation, the Spirax Sarco pressure gauge is a delicate measuring device and care has to be taken in its installation and use if it is to remain reliable.

It is recommended that all gauges are fitted with a ball valve to assist when maintenance is necessary. When used on steam or other hot gases, gauges **must** be protected from heat by the use of a syphon tube and ball valve. To protect live steam from entering the bourdon tube, a syphon filled with water should be installed between the gauge and the process line.

Care should be taken if the installation is exposed to frost as gauges can burst.

Tighten the gauge with care using a 22mm A/F spanner not by twisting the gauge case. Gauges should be selected so as not to exceed 75% of maximum scale reading during normal use.

**Note: Ball valves should always be opened and closed slowly to avoid pressure shocks to the gauges.**

## Safety

### Pressure

Ensure that any pressure is isolated upstream and downstream of the product and safely vented atmospheric pressure before attempting to maintain the product.

### Temperature

Allow time for temperature to normalize after isolation to avoid the danger of burns and consider whether protective clothing (including safety glasses) is required.

### Isolation

Consider whether closing isolating valves will put any other part of the system or personnel at risk. Dangers might include: isolation of vents, protective devices or alarms. Ensure isolation valves are turned on and off in a gradual way to avoid system shocks.

## Steam-Water Washdown Unit

### Description

The Spirax Sarco Steam-Water Washdown Unit dual output design provides hot water for washdown economically by mixing steam and cold water instantly with the ability to supply two individual terminals. The unit's safe design also allows the temperature to be set with its lock nut cap locking device. The internal steam poppet design does not allow live steam to pass if water is interrupted making this unit safe for operation.

Washdown unit operates under a wide range of steam and water pressure with no changing of components.

### Range

Each Steam-Water Washdown Station comprises of a steam-water washdown unit with check valves, globe valves, dual temperature gauge (Fahrenheit and Celsius), hose rack and mounting bracket. Each unit is fully assembled, pressure tested and is supplied with installation and maintenance instructions.

### Recommended ancillaries

- Installation Kit: consist TD52 Steam Trap, (2) Strainers and miscellaneous pipefittings
- Hose
- Nozzle
- 5 liter Sanitizer Bottle Kit
- 3ft Nozzle Stainless Steel Nozzle wand \*Does not include High Flow Nozzle
- Sanitary Fittings

### Operation

While nozzle is held firmly at a wide open position, open cold water globe valve, then steam globe valve slowly to pressurize the washdown unit and begin to spray. Adjust the temperature with the temperature control hand wheel if temperature is not met with a steam globe valve in a fully open position. Once desired temperature is achieved, close-tighten lock nut on steam globe valve in a tight position.

If water pressure is interrupted, steam poppet spring will push the steam poppet back into its closed position for safe shut-down.

### Installation

Full details are provided in the installation and maintenance instructions supplied with each system. Instructions can also be downloaded from our website. (IM-8-002-US)

### Sizes and pipe connections

Washdown Unit	3/4" NPT inlets and outlet (primary and secondary)
Hose	3/4" NPT (male) x 1/2" NPT (male)
Nozzle	1/2" NPT (female)

### Materials

## Nozzles

The standard flow nozzles we offer are durable with variable spray patterns, adjustable from fan spray to solid stream. Standard nozzles are stainless steel material. Aluminum and brass nozzle material is available upon request. Cover colors available in Blue, Red and White.

## Optional Nozzles

Temperature indicating nozzles are also available. Nozzle provides accurate water temperature reading at the nozzle output.

Rating: 150 psi / 200°F (93°C)

**NOTE:** Not for use with steam

## Hoses

All hoses are flexible, lightweight, durable and safe. Standard hoses from Spirax Sarco come with 360° ball type swivel adapter (SS or Bronze) for our nozzles to prevent hose kinking and ease of use.

Lengths available in 25', 50', 75', and 100'. Colors available in white, black, yellow and red.

## Hot & Cold Water Washdown Unit

### Description

Spirax Sarco's hot & cold water washdown unit was specifically designed for thoroughly blending hot and cold water instantly. The unit uses "Y" style body mechanics with lift check valves and ball joint unions for superior flexibility during installation. Spirax Sarco's inlet center lines have the same dimensions as most competitors' units.

### Range

Our units come with a mounting plate for easy behind the unit cleanup, hose rack for easy user access to the hose, and temperature gauge for accurate temperature readings at outlet.

### Recommended ancillaries

- Hose
- Nozzle

### Installation

Full details are provided in the installation and maintenance instructions supplied with each system.

## BSA3T Bellows Sealed Stop Valve

The BSA3T is a low maintenance flanged in-line Bellows Sealed Isolation Valve for use on steam, condensate, gas and other fluid applications where zero emissions from the stem seal are important. BSA3T is fitted with a throttling valve plug that allows close control when opening the valve. Locking screw and stroke limiter maintains correct flow rate once the flow rate is obtained. The "T" version is to be used for regulating duties.

<b>Model</b>	<b>BSA3T</b>
<b>Sizes</b>	1/2" to 8"
<b>Connections</b>	ANSI 300/Optional ANSI 150
<b>Body Design</b>	ANSI Class 300
<b>Construction</b>	Cast Steel
<b>Options</b>	Gland Flange assembly (1/2" to 4") Balancing Disc (6" & 8") R-PTEF Throttling Plug

### Limiting Operating Conditions

<b>Body design conditions</b>	ANSI 300
<b>Maximum design temperature</b>	797°F
<b>Maximum cold hydraulic test pressure</b>	1116 psig

■ The product must not be used in this region.

- C - D Flanged ANSI 150 (optional connection)
- C - F Flanged ANSI 300

### Construction Materials

No.	Part	Material
1	Body	Cast Steel ASTM A 216 WCB
2	Bonnet	Forged Steel (1/2"-3") Cast Steel (4"-8")
3	Seat	Stainless Steel AISI 420
4	Disc	Stainless Steel DIN 17440x30Cr13
5	Bellows	Stainless Steel DIN 17440x6CRNiTi1810
6	Stem	Stainless Steel AISI 420
7	Handwheel	Pressed Steel BS1449 CR4
8	Stem Packing	Graphite
9	Bonnet Studs	Steel ASTM A 193 B7
	Bonnet Nuts	Steel ASTM A 192 2 H
10	Body/Bonnet Gasket	Graphite laminated with Stainless Steel insert

### C<sub>v</sub> Values

### Sample Specification

1" Spirax Sarco Type BSA3T bellows sealed stop valve, flanged ANSI 300 (Available with optional gland flange assembly up to 4").

Note: Should the differential pressure exceed those listed against the respective sizes in the table below, then please ensure Balancing discs are specified for use in the valves. (see diagram).

Size	6"	8"
Differential Pressure (psi)	247	145

### Stroke limiter for throttling versions

The handwheel nut on the BSA1T, BSA2T and BSA3T has a threaded hole for provision of a stroke limiter. Customer to supply standard nuts and bolts as indicated in the table below.

Size	Hexagon bolt
1/2" to 3"	M8 x 50 mm
4" to 6"	M 12 x 75 mm
8"	M12 x 100 mm

### Standards

Valve bellows are designed in accordance to MSS SP-117.

### Certification

All valves are EN 10204 (3.1.B) certifiable as standard and certificates are available on request.

### Seat Leakage

Disc to seat shut off conforms to API 598 no leakage.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

TI-7-220-US 4.14

# BSA3T Bellows Sealed Stop Valve

## Dimensions (nominal) in inches and millimeters

Size	A	B	C	Weight
1/2"	6.0 152	8.07 205	4.92 125	13.2 lb 6.0 kg
3/4"	7.0 178	8.07 205	4.92 125	15.4 lb 7.0 kg
1"	8.0 203	8.54 217	4.92 125	20.0 lb 9.0 kg
1-1/2"	9.0 229	9.56 243	4.92 125	24.3 lb 11 kg
2"	10.5 267	9.56 243	7.87 200	33.0 lb 15.0 kg
3"	12.5 317	11.29 287	7.87 200	64.0 lb 29.0 kg
4"	14.0 356	15.07 383	12.40 315	108.0 49.0 kg
6"	17.5 445	17.7 450	12.40 315	207.0 lb 94.0 kg
8"	22.0 559	24.48 622	12.40 315	424.0 lb 193.0 kg

## Installation

Install in the direction of flow given by the arrow on the body with the handwheel in a suitable position. The preferred position is with the spindle vertical. Refer to IM-P137-02 for full installation and maintenance instructions.

## Spare Parts

The spare parts are shown in heavy outline. Parts drawn in broken line are not supplied as spares.

### Available spares

Body/bonnet gasket and stem packing	10, 8 (2 off)
Stem and bellows assembly (state if BSA or BSAT)	5, 6, 8, 10
Disc (and optional disc where fitted) - state full description of the valve	4, 8, 10

Note: The gaskets contain sharp metal reinforcement, please handle with care.

### How to order spares

Please note: for customer convenience spares are supplied in kits to ensure all the appropriate replacement parts are supplied to carry out a specific maintenance task. e.g. when a stem / bellows assembly is ordered, parts (10), (8) and (6, 5) will be included in the kit.

Always order spares by using the description given in 'Available spares' and state the size and type of stop valve.

**Example: 1** - Body / bonnet gasket and stem packing for a 1/2" Spirax Sarco BSA3T ANSI300 bellows sealed stop valve.

## A3S Bellows Sealed Stop Valve

The A3S is a Class 800 bellows sealed isolation valve used on steam, gas, liquid, condensate, and water systems. The metallic bellows replaces conventional stem packing and acts as an impervious barrier between the fluid and environment. This design guarantees zero emissions from the stem seal.

<b>Model</b>	<b>A3S</b>
<b>Sizes</b>	1/2" to 2"
<b>Connections</b>	NPT, Socketweld
<b>Body Design</b>	ANSI Class 800
<b>Construction</b>	Forged Steel
<b>Options</b>	BSP

### Pressure/temperature limits (Class 800)

- The product **must not** be used in this region.
- Operating restrictions to conform to ISO 15761.

### Construction Materials

No.	Part	Material	
1	Body	Forged Steel	ASTM A105N
2	Bonnet	Forged Steel	ASTM A105N
3	Gland Flange	Forged Steel	ASTM A105

9	Gland Nuts	Carbon Steel	ASTM A194 2H
10	Gland Studs	Stainless Steel	AISI 410
11	Stem Packing	Graphite	
12	Gland Follower	Stainless Steel	ASTM A276 Type 410
13	Handwheel	Carbon Steel	
14	Wheel Nut	Carbon Steel	
15	Nameplate	Stainless Steel	
16	Stem	Stainless Steel	ASTM A276 Type 410
17	Yoke Nut	Stainless Steel	ASTM A582 Type 416
18	Grease Nipple	Carbon Steel	

### Standards

Valve bellows fatigue life conforms to ISO 15761.

### Certification

All valves are EN 10204 (3.1.B) certifiable as standard. Note: All certification/inspection requirements must be stated at the time of order placement.

### Seat Leakage

Disc to seat shut off conforms to API 598 and DIN 3230 leakage rate B01.

### C<sub>v</sub> Values

Size	1/2"	3/4"	1"	1-1/4"	1-1/2"	2"
	1.5	3.7	6.8	10.5	19.9	22.5

### Sample Specification

1" Spirax Sarco Type A3S bellows sealed stop valve screwed NPT.

Local regulation may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.

# Spirax SafeBloc™ DBB3 Double Block and Bleed Bellows Sealed Stop Valve

## Description

The Spirax SafeBloc™ is a double block and bleed bellows sealed stop valve, accommodated within the same face-to-face dimension of a single valve. It has been designed for use as an in-line double isolation valve on steam, gas, liquid, condensate and water systems.

## Available types

**DBB3** steel body and bonnet with ANSI 300 connections and optional PN40 connections.

## Seat leakage

Disc to seat shut-off conforms to EN 12266-1 leakage Rate A and ISO 5208 Rate A.

## Bleed valve options

A **bleed valve connection** is provided to depressurise the downstream when the upstream valve is isolated. This can be supplied with either a 1/2" flanged, 1/2" screwed NPT or BSP or 1/2" socket weld connection. Bleed valve connection must be stated at the time of order placement.

## Standards

This product fully complies with the requirements of the European Pressure Equipment Directive 97/23/EC and carries the **CE** mark when so required.

## Certification

This product is available with certification to EN 10204 3.1.  
**Note:** All certification/inspection requirements must be stated at the time of order placement.

## Size and pipe connections

1/2", 3/4", 1", 1 1/2", 2", 2 1/2", 3" and 4" flanged ANSI B 16.5 Class 300. EN 1092 PN40 optional. The face-to-face dimensions conform to BS EN 558:2008

## C<sub>v</sub> values

Size	1/2"	3/4"	1"	1 1/2"	2"	2 1/2"	3"	4"
	DN15	DN20	DN25	DN40	DN50	DN65	DN80	DN100

# Spirax SafeBloc™ DBB3

## Double Block and Bleed Bellows Sealed Stop Valve

### Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P184-09) supplied with this product.

### Disposal

This product is recyclable. No ecological hazard is anticipated with the disposal of this product, providing due care is taken.

### How to order

**Example:** 1 off ½" Spirax SafeBloc™ DBB3 double block and bleed bellows sealed stop valve having flanged ANSI 300 connections. The bleed valve connection is to be ½" flanged ANSI 300.

**Note:** The bleed valve is to be ordered separately. For example: 1 off Spirax Sarco ½" BSA3T bellows sealed stop valve having flanged ANSI 300 connections.

### Spare parts

The spare parts available are shown in solid outline. Parts drawn in broken line are not supplied as spares.

#### Available spares

Body/bonnet gasket and stem packing	8 (2 off), 11a, 11b
Stem and bellows assembly	6, 5
Disc	4

**Note:** The gasket contains sharp metal reinforcement, please handle with care. For a complete overhaul of the valve 2 x each spare is required.

#### How to order spares

**Please note:** for customer convenience spares are supplied in kits to ensure all the appropriate replacement parts are supplied to carry out a specific maintenance task e.g. when a stem and bellows assembly is ordered, parts (8, 11a and 11b) and (6 and 5) will be included in the kit.

Always order spares by using the description given above and state the size and type of stop valve.

**Example:** 1 - Body/bonnet gasket and stem packing for a ½" Spirax SafeBloc™ DBB3 double block and bleed bellows sealed stop valve having ANSI 300 connections.

## Blowdown Separators “BDSP” Series

### Description

The Blowdown Separator system is an effective means of Processing water from the boiler during bottom blowdown reducing the pressures to atmospheric levels and cooling the residual condensate for safe discharge to drain. The BDSP units centrifugally separate the flash steam from the hot discharge systems. The separators are ASME Section VIII Div I constructed stamped. Various options and accessories are available.

### Typical applications

Boiler Blowdown controlling the presence of sediment and particulates in the boiler. Use with single or multiple boilers to handle the blow down loads and cool the effluent for safe discharge to drain.

### Standard Features

- Spirax Sarco centrifugal high efficiency flash tank
- Heavy duty C/S base
- Hydrotested, blasted, and coated with SSI Hi temp black enamel
- ASME Section VIII Code Stamped separator vessel with SS internal wear plate

### Additional Options are available

### Suggested Specification

- Furnish and install where shown on plans,  
Spirax Sarco Inc. Model# **BDSP** \_\_\_\_\_  
Blowdown Separator
- The carbon steel receiver shall be ASME Constructed and stamped for 150 PSIG WP. With integral Stainless steel wear plate.
- No threaded connections above 2" NPS on the package piping are permitted.
- The package shall be sized to meet (or exceed) the actual required blowdown system load.
- The package shall include a structural steel skid and painted with 1 coat Hi-Temp black enamel.

### Capacity

For sizing data, see Selection & Capacity Chart.

### Typical Construction

Model	BDSP- Series
PMO	150 psig
Design Pressure (PMA)	150 psig @ 550°F
Capacity Range	100 to 100,000 lbs./hr
Vessel	ASME Constructed and Stamped 150 psig @ 550°F
Hydrotest Pressure	225 psig
Construction Materials	Flash Vessel – Carbon Steel Supports- Carbon steel Piping - A106 Seamless Carbon Steel
Dimensions & Weight	See SSI Sales Drawings

*Local regulations may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

# Blowdown Heat Recovery Modules "BDHR" Series

## Description

The packaged Blowdown Heat Recovery system is an effective means of reclaiming valuable heat normally lost in the control of boiler water chemistry and cooling the wastewater to temperatures safe for discharge into sewer systems. The centrifugal blowdown vessel effectively separates flash energy from the condensate and discharges condensate through a heat exchanger typically to preheat make up water. The flash steam generated is used to heat make up water in the DA tank maximizing energy efficiency.

## Typical applications

Automatic Boiler Blowdown Systems controlling the level of dissolved solids in make up water. Use with single or multiple boilers to recover valuable heat energy.

## Standard Features

- Spirax Sarco centrifugal high efficiency flash tank
- Pressure relief valve
- Spirax Sarco mechanical or electronic level controls
- Plate and Frame heat exchanger
- Heavy duty C/S base
- Hydrotested, blasted, and coated with SSI Hi temp black enamel
- Fabricated in accordance with ANSI/ASME B31.3 by ASME Section IX certified welders.
- ASME Section VIII Code Stamped flash vessel and heat exchanger.

## Additional Options are available

## Suggested Specification

- Furnish and install where shown on plans, Spirax Sarco Inc. Model# BDHR\_\_\_\_-\_\_\_\_-\_\_\_\_-\_\_\_\_ Blowdown Heat Recovery System
- The system shall be a complete pre-piped factory package requiring only service connections for a fully functional system.
- The carbon steel receiver shall be ASME Constructed and stamped for 150 PSIG WP.
- All condensate piping shall be schedule 40 Seamless C/S pipe
- No threaded connections above 2" NPS on the package piping are permitted.
- The package shall be sized to meet (or exceed) the actual required condensate system load.
- The package shall include a structural steel skid and painted with 1 coat Hi-Temp black enamel.

## Capacity

For sizing data, see Selection & Capacity Chart.

## Typical Construction

Model	BDHR- Series
PMO	125 psig
Design Pressure (PMA)	125 psig @ 320°F
Capacity Range	100 to 100,000 lbs./hr
Flash Vessel	ASME Constructed and Stamped 150 psig @ 550°F
Heat Exchanger	Plate and Frame – ASME Constructed and stamped for 150 Psig 316L stainless steel plates and EPDM gaskets
Hydrotest Pressure	188 psig
Construction Materials	Flash Vessel – Carbon Steel Heat exchanger- Carbon steel covers with 316L SS plates Frame- Carbon steel Isolation valves - Carbon Steel 150# Piping - A106 Seamless Carbon Steel
Dimensions & Weight	See SSI Sales Drawings

*Local regulations may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

TI-ESD2001-US 4.14

Heat Transfer

## EasiHeat Packaged Heat Exchanger System

- Hot water for heating, potable & process applications.
- Non ferrous waterside construction.
- Stable temperature control  $\pm 9^{\circ}\text{F}$  on instantaneous duty
- Spirax Sarco steam control and condensate products.
- Plate and frame heat exchanger.
- Fully assembled skid-mounted system.

### EasiHeat system

The EasiHeat system uses steam to provide accurate heating of low temperature hot water (HTG), domestic hot water (DHW) or hot water for processes. Systems can be sized for any heating duty up to approximately 6 MBTUH and are supplied fully assembled and pressure tested ready for installation.

The EasiHeat provides the core of the system. Additional items such as steam pressure reduction, safety valve and safety high limit shut-off should be selected separately.

### Temperature control

The steam flowrate is modulated to exactly match the system demand. The control valve is pneumatically actuated and the system uses a fast response temperature sensor and programmer/ controller for precise temperature control. Electric operated control systems are available.

### Heat exchanger

The plate heat exchanger for steam is used for efficient heat transfer within a very compact design. The high surface/ volume ratio of the plates enables rapid heat transfer, allowing a fast response to temperature control. The heat exchanger is easily dismantled for examination or cleaning of the heat transfer surfaces without disrupting any steam or water connections. All wetted parts are stainless steel.

### Design

Heat exchanger- Plate and Frame Type — ASME Constructed & Stamped at 150 psig

Steam Side = 125 PSIG Max allowable pressure @ 356°F

Water Side = 150 PSIG Max allowable working pressure @ 230°F

### Materials

Steam and Condensate Piping = Carbon Steel

Water side Piping = 316/316L Stainless Steel

Circulation Pump - Stainless Steel

### Condensate removal

Effective condensate removal from the heat exchanger under all operating conditions is essential to achieve a stable water temperature. At part load the pressure inside the heat exchanger may go below atmospheric so a pressure powered pump is usually used to ensure condensate removal. For suitable applications a steam trap may be used instead.

EasiHeat with condensate pump and secondary recirculation for domestic hot water service

EasiHeat with steam trap for low temperature of water (heating) service

# EasiHeat

## Packaged Heat Exchanger System

### Pipework

All pipework is correctly sized for the application and is fabricated using modern welding techniques, approved welders and weld procedures. Flanged products are used where possible for reliability and easy maintenance.

### Electrics and pneumatics

All control equipment is pre-wired and piped ready for connection to the air supply and power source.

Supply voltage	AEH...HTG	115VAC / 230VAC
	AEH...DHW	115VAC / 230VAC

### Support frame

The whole system is delivered pre-assembled on a compact frame and baseplate suitable for moving into position with a fork lift truck.

### Domestic hot water applications

In many cases the very fast response of the packaged plate heat exchanger system will mean that large hot water storage tanks are no longer required. The system uses pumped hot water circulation. The first hot water draw-off point must be at least 15' from the heat exchanger.

Heat Transfer

## Sizing RediHeat Instantaneous Water Heaters

Use the tables below to select the RediHeat model that meets the required GPM of hot water at the desired temperature.

**Note:** Supply pressures above 15 psig must be reduced through a pressure regulator ("H" Package).

### Single Wall

Desired Outlet Temp (°F)	Pressure	Winter Conditions 40°F Inlet Water Hot Water Output (GPM)					Summer Conditions 60°F Inlet Water Hot Water Output (GPM)				
		10	15	20	25	30+	10	15	20	25	30+
110	RH-30	30	30	30	32	35	30	30	30	40	40
	RH-60	60	60	60	65	70	60	60	60	75	80
	RH-90	90	90	90	90	90	90	90	90	90	90
	RH-120	120	120	120	120	120	120	120	120	120	120
120	RH-30	30	30	30	30	35	30	30	30	35	40
	RH-60	60	60	60	60	65	60	60	60	75	80
	RH-90	90	90	90	90	90	90	90	90	90	90
	RH-120	120	120	120	120	120	120	120	120	120	120
140	RH-30	25	25	25	30	30	25	30	30	30	35
	RH-60	60	60	60	60	60	60	60	60	60	70
	RH-90	90	90	90	90	90	90	90	90	90	90
	RH-120	115	120	120	120	120	120	120	120	120	120
150	RH-30	20	25	25	25	30	25	25	30	30	30
	RH-60	55	55	55	55	55	55	60	60	60	65
	RH-90	80	80	80	80	80	85	90	90	90	90
	RH-120	110	110	110	110	110	115	115	115	115	120
160	RH-30	10	15	20	25	25	15	15	20	30	30
	RH-60	45	45	45	50	50	50	55	55	55	60
	RH-90	65	70	70	70	70	75	85	85	85	85
	RH-120	90	90	90	90	95	105	110	110	110	115

Capacities are based on water pressure ranges of 30 to 150 psig.

Presence of residual superheat following pressure reduction on steam supply pressures greater than 15 psig can increase capacity as shown.

Inlet steam pressure above 50 psig (RH-90 & RH-120) and 75 psig (RH-30 & RH-60) require the installation of a safety relief valve.

Units utilizing alternate tube materials will exhibit lower maximum capacities. To determine actual capacity, multiply the above values as follows:

Admiralty - 0.95, Cupro Nickel - 0.81, Stainless Steel - 0.85

110	RH-30D	30	30	30	30	30	30	30	30	30	30
	RH-60D	60	60	60	60	60	60	60	60	60	60
120	RH-30D	30	30	30	30	30	30	30	30	30	30
	RH-60D	60	60	60	60	60	60	60	60	60	60
140	RH-30D	25	25	25	25	25	25	30	30	30	30
	RH-60D	60	60	60	60	60	60	60	60	60	60
160	RH-30D	10	15	20	20	20	15	15	20	20	20
	RH-60D	45	45	45	45	45	50	55	55	55	60

Capacities are based on water pressure ranges of 30 to 150 psig.

Inlet steam pressure above 50 PSIG (RH-90 & RH-120) and 75 psig (RH-30 & RH-60) requires the installation of a safety relief valve.

Double wall units are available only with copper tubes

# Sizing RediHeat "H" Package Pressure Regulator

When steam supply pressure to the RediHeat unit exceeds 15 psig the "H" Package must be furnished with the base unit. The "H" Package consists of 1 pressure reducing valve complete with pressure pilot and 1 strainer.

1. Determine the flow of steam in lbs/hr required to meet the unit's capacity.
2. Enter chart below at supply steam pressure and continue to move across until the required capacity in lbs/hr is found. From that point move vertically and read the valve size indicated.

Example: RH-30 to heat 20 GPM water from 40-120°F. Supply steam pressure is 100 psig.

$$\text{Formula: } \frac{\text{GPM} \times 500 \times \Delta T (\text{°F})}{946} = \text{lbs/hr}$$

$$\frac{20 \times 500 \times 80}{946} = 846 \text{ lbs/hr}$$

In this example with a 100 psig steam supply pressure, a 3/4" pressure regulator will be suitable for the required duty of 846 lbs/hr of steam.

Steam Supply Pressure (psig)	Pressure Regulator Selection Chart Capacity (lbs/hr) by valve size								
	1/2"	3/4"	1"	1-1/4"	1-1/2"	2"	2-1/2"	3"	4"
25	145	270	435	580	830	1,450	2,325	3,070	4,770
30	220	410	665	890	1,270	2,220	3,555	4,700	7,300

85	515	960	1,555	2,070	2,960	5,180	8,290	10,950	17,020
100	600	1,120	1,815	2,420	3,460	6,055	9,690	12,800	19,895
125	730	1,365	2,200	2,940	4,200	7,350	11,760	15,540	24,150
150	860	1,600	2,590	3,460	4,940	8,645	13,830	18,280	28,400
175	985	1,840	2,970	3,960	5,660	9,900	15,850	20,950	32,545
200	1,125	2,100	3,390	4,520	6,460	11,300	18,000	23,900	37,145
225	1,250	2,340	3,780	5,000	7,200	12,600	20,160	26,640	41,400
250	1,385	2,590	4,180	5,570	7,960	13,930	22,300	29,450	45,800

- Notes:**  
 Pressure regulators supplied are Cast Iron as standard.  
 1/2" – 2" regulators are threaded NPT as standard.  
 2 1/2" – 4" regulators (for steam supply pressures up to 125 psig) are flanged ANSI 125 as standard.  
 For 2 1/2" – 4" regulators where the steam supply pressure is above 125 psig, consult Spirax Sarco for 150 ANSI flanged regulator pricing.

## RediHeat Instantaneous Water Heater

### Description

The RediHeat is a steam (shell side) to water (tube side) heat exchange package that incorporates a unique feed-forward temperature control system to instantly produce hot water within +/-4°F of the set temperature under widely varying demands. This outstanding performance makes the RediHeat the ideal solution for domestic hot water applications where tight temperature control and instant response to changes in demand are required.

### Temperature Control

Water temperature is controlled by a mechanical blending valve that operates based on demand. A manual adjustment compensates for seasonal changes in cold water supply temperature. The blending valve has a fail-safe design ensuring consumers can never be exposed to hot water at temperatures above set point – vital for domestic hot water applications. Potential failure or damage to the unit will produce only cold water.

### Heat Exchanger

The RediHeat features a spiral tubed helical heat exchanger for efficient heat transfer in a compact space. The coiled tube technology does not require tube supports allowing the tubes to be in very close proximity resulting in a more compact heat transfer bundle. The helical design of the coil allows it to expand and contract with temperature change such that any scale that has hardened on the inside of the tubes is broken up by the changing shape of the coil. The rugged casing and bourdon tube configuration also allows the entire assembly to expand and contract in response to temperature change without localized stressing. This is ideal for intermittent cycling that is common with domestic hot water applications.

### Efficiency

The typical domestic hot water system only places a demand on the heat exchanger 15% of the time. The feed forward design of the RediHeat only consumes energy when responding to demand. With no hot water storage required, this mode of operation can save as much as 40% in energy costs when compared to a hot water tank system.

### Anti-Bacterial

The perfect environment for the growth of legionella bacteria is stagnant water between 68°F and 122°F. The presence of scale and sediment only expedites colonization. With the RediHeat feed-forward design, water is over-heated to 160°F - 200°F in the heat exchanger before being blended (in response to demand) with incoming cold water to the desired output temperature. In this way the presence of stagnant water at bacteria-friendly temperatures is eliminated.

### Recirculation System

A problem many hot water systems encounter is the delayed supply of hot water to fixtures that are a substantial distance from the heater. During idle periods, heat loss in the piping system will result in cool water at the faucet until hot water produced from the heater is able to reach that point. Delays in providing hot water at the faucet can result in user dissatisfaction. To provide instantaneous

hot water on demand in systems with long pipe runs a recirculation system incorporating a pump (not included) to maintain constant flow should be installed. The RediHeat recirculation system maintains loop temperatures by measuring the temperature of the returning hot water and, dependent on temperature, either passing it back through the heat exchanger for re-heating or diverting it back to the hot water loop.

### Installation

With a footprint of only 6.5 square feet and a height of 33.5" for the largest unit, the RediHeat is the most compact instantaneous water heater available – important when space is at a premium. The unit requires no extraneous power sources, controls or temperature sensors making installation quick and simple. The RediHeat may be wall or floor stand mounted or can be suspended from the ceiling. Approximately 3' clearance from the floor is required to allow room for steam and condensate connections and the hot water outlet. An optional angle iron stand is available and recommended for floor mounting. For optimal heater performance, the steam trap should discharge to 0 psig, below the level of the trap. If lift of condensate is required or the trap must discharge to a back pressure, an automatic pump trap (APT) should be fitted for correct operation. Contact Spirax Sarco for details. The steam inlet pressure to the heat exchanger is limited to 15 psig. Greater steam supply pressures require installation of a pressure regulator. A pressure relief valve set at 75 psig (for RH-30 & RH-60) or 50 psig (for RH-90 & RH-120) should be installed in the steam inlet pipe downstream of the pressure regulator if steam pressure to the heat exchanger can exceed these limits. Acceptable cold water inlet pressure range is 30 to 150 psi. Water pressure must be at least 15 psi greater than steam pressure for correct operation. The RediHeat incorporates an integral pressure relief valve (located on side of the blending valve) to relieve excess water pressure caused by thermal expansion.

*Local regulations may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. In the interests of development and improvement of the product, we reserve the right to change the specification.*

TI-12-008-US 3.13

# RediHeat Instantaneous Water Heater

## Maintenance

When maintenance on the helical heat exchanger is required, the coiled tube bundle can be either removed for cleaning or cleaned in place. Due to the helical design, removal is easy and does not require the withdraw space typical with other shell and tube designs. An acid pump cleaning system is available for cleaning the coil in situ when poor water quality can result in scaling.

## Typical Specification

The domestic hot water heater shall be a Spirax Sarco RediHeat steam-fired, instantaneous water heater incorporating feed forward temperature control to instantly produce hot water within +/-4°F of the set temperature under widely varying demands. The unit will incorporate an ASME code stamped helical coil heat exchanger and blending valve. The coiled tube bundle must be capable of being removed for inspection and service without breaking steam connections or removing the unit from its installed position. The unit shall be completely self-contained and require hook-up only to steam and water. There shall be no electric or pneumatic requirements. Each heater shall be a factory assembled package with the capacity to heat \_\_\_ gpm of water from \_\_\_ to \_\_\_ degrees Fahrenheit without the use of thermostatic control devices or storage tanks. Supply steam pressure is \_\_\_ psig.

RediHeat Model	RH-30		RH-60		RH-90		RH-120	
<b>Performance</b>								
Nominal maximum output (gpm)	30		60		90		120	
Capacity	Heat 40 °F water up to 140 °F. Outlet temperature adjustable.							
Steam inlet pressure	10 to 15 psig standard 20 to 250 psig requires pressure regulator (H package)							
Steam flow	Approximately 50 lbs/hr per 1 gpm of water heated.							
Water inlet pressure	30 to 150 psig (must be at least 15 psi above steam pressure for correct operation)

## Advanced Potable Process Water Heating System Compact Heat Transfer Unit

### Potable Process Water Heating System

The Spirax EasiHeat™ DHW incorporating SIMS technology is a complete, compact system using steam for accurate heating of potable hot water for domestic use or process applications. Standard systems can be sized to heat up to 110 GPM of water over a 100°F temperature rise and are supplied fully assembled and tested ready for installation.

#### Principal features and benefits:

- Energy usage monitoring, real time CO<sub>2</sub> emission calculations, multiple communication options, remote monitoring, SMS text or E-mail system alarms notification.
- Designed with integral condensate sub-cooling for maximum efficiency and zero flash steam loss.
- Precisely engineered system with matched components that provide accurate temperature control under wide and fluctuating load demands.
- Guaranteed performance
- Fully assembled and tested ready for on-site installation
- Options to suit all applications including single and double wall construction

#### Heat Exchanger

The plate and frame heat exchanger, designed specifically for steam to hot water service, delivers high heat transfer efficiency in a compact footprint with low volume to pressure ratio. The heat exchanger can be easily dismantled for examination and cleaning of the heat transfer surfaces without disruption to any steam or water connections. Additionally the connecting pipework incorporates CIP connections as standard. The heat exchanger is ASME constructed and stamped to 150psig. All wetted parts are 316 stainless steel with EPDM gaskets suitable for 356°F working temperature. Double wall heat exchangers are available as an option.

#### Temperature Control

Temperature control is achieved by the use of a programmable logic controller (PLC) and fast response Pt100 temperature sensors, which in turn provide a modulated control signal to the fast acting steam control valve. The control valve, that can be either pneumatically or electrically actuated, regulates steam flow to accurately maintain the required temperature set points over widely fluctuating heat demands.

#### Energy Meter

A key component guaranteeing accurate measurement of energy usage, CO<sub>2</sub> emissions and cost control. The TVA flowmeter (included when energy monitoring option selected), is specifically designed for large turndowns on steam applications

#### Condensate Removal

The EasiHeat incorporates a closed loop, non-vented condensate removal system comprising a pressure powered pump with integral or separate steam trap that provides the total solution to all stall conditions by removing condensate under all operating conditions.

#### Materials

Steam and condensate (primary) side piping	ASTM A105 Carbon Steel	≤2" nominal bore schedule 80 >2" nominal bore schedule 40
Water (secondary) side piping	304L Stainless Steel	≤2" nominal bore schedule 80 >2" nominal bore schedule 40
Heat exchanger plates	316 Stainless Steel	
Heat Exchanger gaskets	EPDM	
Steam control valve	Cast Iron	
Condensate pump trap	Ductile or S.G. Iron	
All secondary side components (wetted parts)	Stainless Steel (except for P&T relief valves - Lead-free Brass)	

#### Control Panel

The Spirax EasiHeat™ DHW features innovative control processes incorporating SIMS technology delivering increased monitoring and communications. The NEMA 12 enclosure houses a PLC with color touch-screen HMI providing ease of use and clear visual access to all system parameters and energy data. The system offers optional energy monitoring, using a mass steam flow signal from a wide turndown flowmeter installed in the steam inlet, to accurately calculate energy usage, cost of hot water per gallon, CO<sub>2</sub> emissions and carbon footprint.

#### Pressure and Temperature Ratings

Pipework design	ASME 150
Maximum saturated steam supply pressure	130 psig
Maximum secondary pressure	150 psig
Maximum secondary temperature	210°F
Maximum gasket temperature	356°F

Local regulations may restrict the use of this product below the conditions quoted. Limiting conditions refer to standard connections only. TI-P481-08-US 12.15  
In the interests of development and improvement of the product, we reserve the right to change the specification.

# Installation

## Approved Potable Water Treatment System Contact Transfer of Control

### Preparation

All pipework is correctly sized for the application and is fabricated using modern welding techniques, approved welders and weld procedures. Flanged products are used where possible for reliability and easy maintenance.

All pipework, components and fittings on the secondary side that come into contact with potable water meet and fully comply with the lead-free requirements of the Safe Drinking Water Act.

### Port Frame

The Spirax EasiHeat™ DHW system is delivered pre-assembled on a compact frame and baseplate ready to position at the installation location with a fork lift truck or other lifting device. The EasiHeat™ is designed to fit through a standard 36" door and can be fitted with optional wheels for easy maneuvering in tight locations.

### Electricals

All control equipment is pre-wired and piped ready for connection to the air supply and power source.

Electrical supply	Power supply	110–240 v AC / 50–60 Hz
	Supply fuse	5 Amps (T)
Actuators	Electric	24 v AC / 50-60 Hz
	Pneumatic	60-90 psig

### Communications

The Spirax EasiHeat™ offers a range of communication protocols including:

Modbus RTU	Modbus TCP/IP
BACnet MS/TP	BACnet TCP/IP
DeviceNet	CANopen
Profibus	LonWorks

### Operation

- The Spirax EasiHeat™ provides precise control of outgoing temperature and offers data logging capabilities for a minimum of 30 days.
- Steam supply is modulated via a pneumatic or electric actuated globe type steam control valve with smart positioner and class IV shut off.
- An integrated high limit alarm circuit actuates a steam isolating valve offering bubble tight shut off to protect against high temperature excursions by preventing steam from entering the heat exchanger. In addition, there is a temperature controlled quench valve that guards against temperature overshoots by adding cold feed water in the hot water outlet. This prevents nuisance high limit alarm activation. Both these functions automatically terminate once satisfactory outlet water temperature has been re-established.
- Optional manually operated isolation ball valve for secure steam shut off.
- A recirculating pump with connections to the secondary side inlet and outlet spools provides uniform water temperature throughout the heat exchanger and across RTD's to ensure accurate temperature measurement and control.
- Pressure & Temperature safety relief valves on secondary side.
- All wetted parts on the secondary (water) side are lead-free and conform to the requirements of the Safe Drinking Water Act.
- UL® listed control panel enclosure, components and wiring.

**Notes**

1. The heat loads listed above are based on a steam inlet pressure of 30 psig and a backpressure of 10 psig. Higher heat transfer rates / flow rates can be achieved by using higher pressure steam.
2. Capacities have been based on a 40°F to 140°F (100°F ΔT) temperature rise.
3. Capacities are for single wall heat exchangers. Double wall heat exchangers will reduce capacity.
4. The height of the skid will increase by 1" if wheels are fitted.
5. Dimensions shown are for units without split range control valves, energy monitoring and manual isolation valve.
6. Connection sizes shown are for units without energy monitoring (flowmeter) and manual isolation valve options.
7. Length (longest horizontal plane) x Width (shortest horizontal plane) x Height (vertical plane)

### Typical specification

The packaged, skid mounted, steam fired heat transfer system for the generation and supply of potable hot water for domestic and process applications shall be a Spirax EasiHeat™ complete with plate and frame heat exchanger, interconnected pipe work, electronic data logging, PLC, pneumatic or electric actuated globe type steam control valve with smart positioner and class IV shut off, actuated high limit steam isolating valve offering bubble tight shut off, closed loop non-vented condensate removal system and all required specialties and controls as specified / required. All items shall be preassembled, hydrostatic and dry function tested prior to shipping.

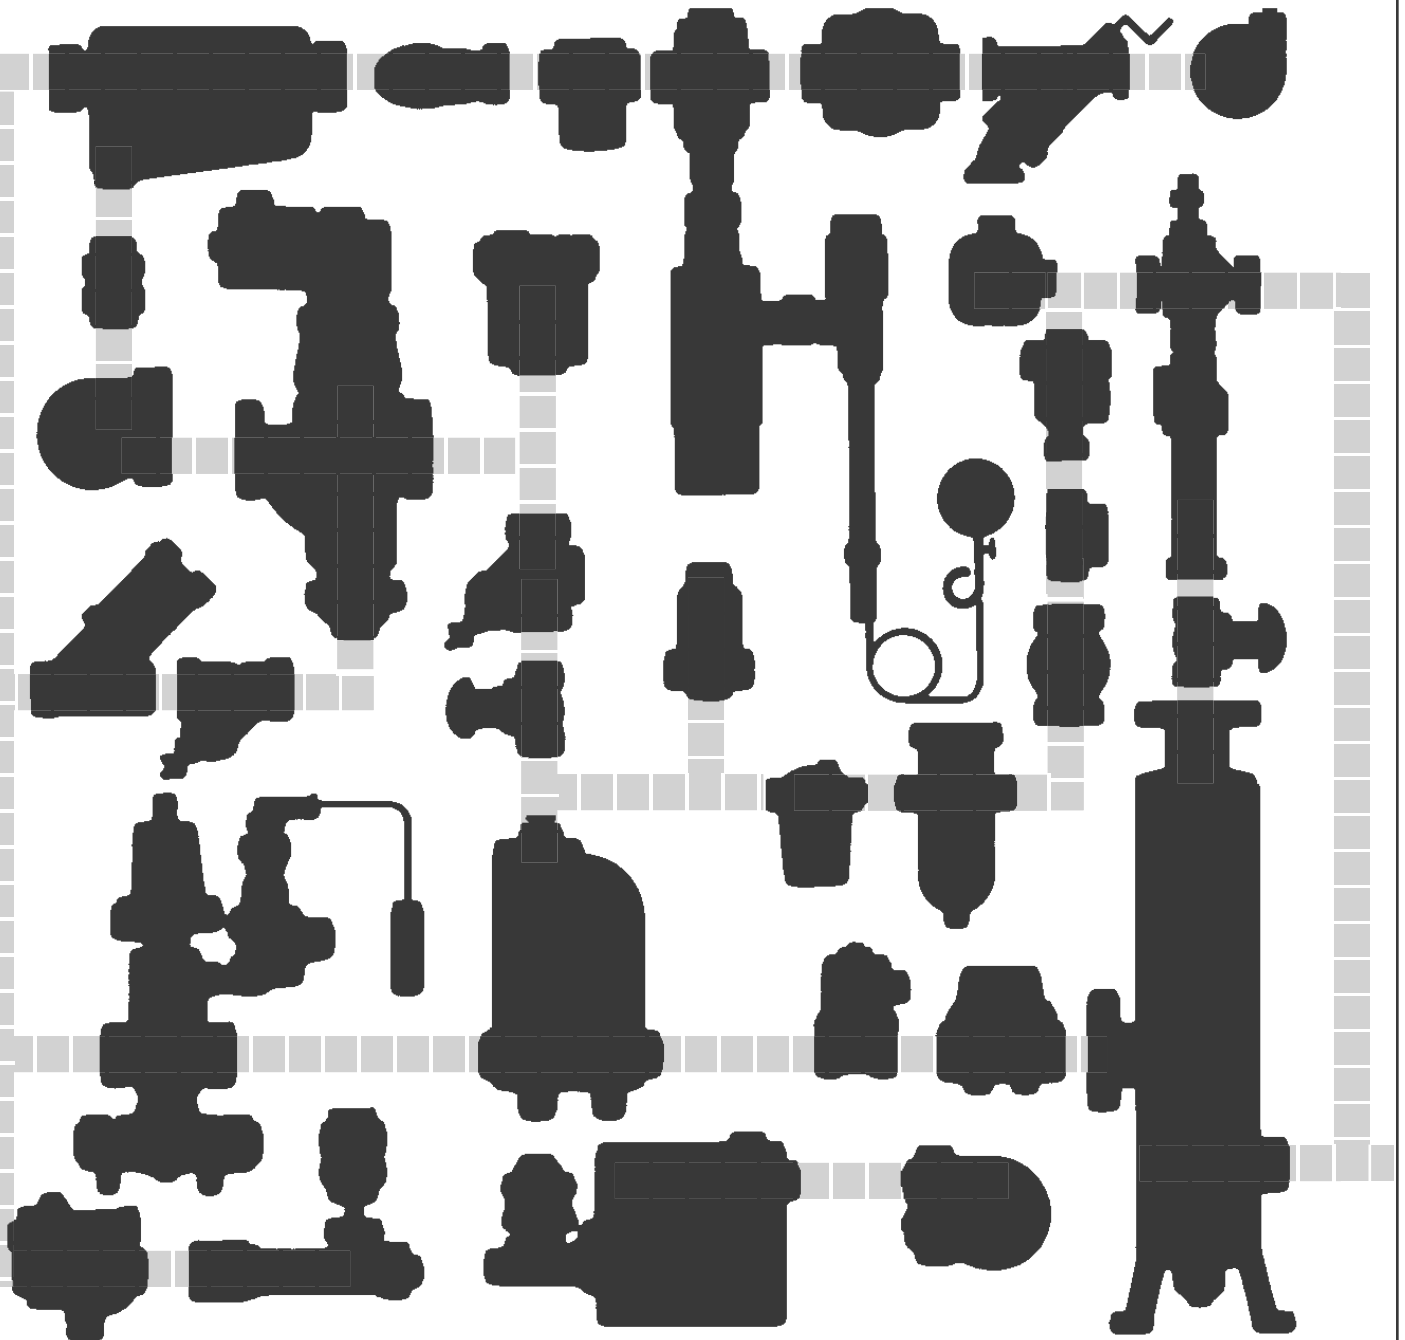

Temperature control to be achieved by the use of a programmable logic controller and temperature sensors, which in turn will provide a modulated control signal to the steam control valve to accurately maintain the required temperature set points. An actuated steam shut off valve protects against excessively high temperature excursions by preventing steam from entering the heat exchanger until satisfactory outlet water temperature has been re-established. All control equipment is to be pre-wired to the integral temperature controller. All components to be factory installed, wired and ready to connect to building services. Supply voltage is 110/1/60. Control enclosure to be NEMA 12. Integral temperature controller to have a local touchscreen HMI. The heat exchanger shall be fully serviceable, including chemical and manual cleaning, without the need to disconnect any of the steam, condensate or water pipework connections.

### How to order

All systems are designed for the required heat load with controls to suit the application. To ensure that all pertinent information for quotation and manufacture is accurately communicated, a Spirax Sarco Engineered Systems RFQ Data Sheet should be completed and all special requirements should be noted.

# Calculating Condensate Loads

When the normal condensate load is not known, the load can be approximately determined by calculations using the following formulae.

## General Usage Formulae

Heating water with steam (Exchangers)\*

$$\text{lb/h Condensate} = \frac{\text{GPM}}{2} \times (1.1) \times \text{Temperature Rise } ^\circ\text{F}$$

Heating fuel oil with steam

$$\text{lb/h Condensate} = \frac{\text{GPM}}{4} \times (1.1) \times \text{Temperature Rise } ^\circ\text{F}$$

Heating air with steam coils

$$\text{lb/h Condensate} = \frac{\text{CFM}}{800} \times \text{Temperature Rise } ^\circ\text{F}$$

Steam Radiation

$$\text{lb/h Condensate} = \frac{\text{Sq. Ft. E. D. R.}}{4}$$

$$\text{lb/h Condensate} = \frac{\text{BTU/HR}}{\text{Latent Heat at Operating Pressure}}$$

$$\text{lb/h Condensate} = \frac{\text{MBH} \times 1,000}{\text{Latent Heat at Operating Pressure}}$$

\*Delete the (1.1) factor when steam is injected directly into water.

## Specialized Applications

### Sterilizers, Autoclaves, Retorts Heating Solid Material

$$\text{lb/h Condensate} = \frac{W \times C_p \times \Delta T}{L \times t}$$

W = Weight of material — lbs.  
 Cp = Specific heat of the material  
 ΔT = Temperature rise of the material °F  
 L = Latent heat of steam Btu/lb  
 t = Time in hours

### Steam Jacketed Dryers

$$\text{lb/h Condensate} = \frac{1000 (W_i - W_f) + (W_i \times \Delta T)}{L}$$

Wi = Initial weight of the material — pounds per hour  
 Wf = Final weight of the material — pounds per hour  
 ΔT = Temperature rise of the material °F  
 L = Latent heat of steam Btu/lb

### Heating Liquids in Steam Jacketed Kettles and Steam Heated Tanks

$$\text{lb/h Condensate} = \frac{G \times \text{s.g.} \times C_p \times \Delta T \times 8.3}{L \times t}$$

G = Gallons of liquid to be heated  
 s.g. = Specific gravity of the liquid  
 Cp = Specific heat of the liquid  
 ΔT = Temperature rise of the liquid °F  
 L = Latent heat of the steam Btu/lb  
 t = Time in hours

### Heating Air with Steam; Pipe Coils and Radiation

$$\text{lb/h Condensate} = \frac{A \times U \times \Delta T}{L}$$

A = Area of the heating surface in square feet  
 U = Heat transfer coefficient (2 for free convection)  
 ΔT = Steam temperature minus the air temperature °F  
 L = Latent heat of the steam Btu/lb

Note: The condensate load to heat the equipment must be added to the condensate load for heating the material. Use same formula

## Steam Tracing Lines:

Approximate load is 10 to 50 lb/h for each 100 ft. of tracer

## Recommended Safety Factors for Steam Traps

The actual safety factor to use for any particular application will depend upon accuracy of:

1. Estimated load
2. Estimated pressure at trap
3. Estimated backpressure

Any unusual or abnormal conditions must be taken into consideration.

Safety Factor by Type of Trap	Safety Factor
Balanced-Pressure Thermostatic Traps	2 to 4
Thermo-Matic Thermostatic Traps	1.5 to 2.5
Liquid Expansion Traps	2 to 4
Bimetallic Traps	2 to 3
Float and Thermostatic Traps	1.5 to 2.5
Inverted Bucket Traps	2 to 3
Thermo-Dynamic® Traps	1.2 to 2

Safety Factor by Application	General	With Temp. Control
Mains Drainage	x 2	—
Storage Heaters	x 2	—
Unit Heaters	x 2	x 3
Air Heating Coils	x 2	x 4
Submerged Coils (low level drain)	x 2	—
Submerged Coils (siphon drain)	x 3	—
Rotating Cylinders	x 3	—
Tracing Lines	x 2	—
Platen Presses	x 2	—

Rule of Thumb: Use factor of 2 on everything except Temperature Controlled Air Heater Coils and Converters, and Siphon applications

## Effect of Backpressure on Steam Trap Capacity

### % Reduction in Capacity

Backpressure % of Inlet	Inlet Pressure PSIG			
	5	25	100	200
25%	6%	3%	0%	0%
50	20	12	10	5
75	38	30	28	23

## Warm-up and Condensate Load Tables

### Warm-up Load in Pounds of Steam per 100 ft of Steam Main (based on a start-up timer of 1 hour)

Ambient Temperature 70°F. Based on Sch. 40 Pipe to 250 psi, Sch. 80 Above 250 Except Sch. 120 5" and Larger Above 800 psi.

# Heat Transfer Calculations

## Heat Emission Rates from Pipes Submerged in Water

Published Overall Heat Transfer Rates	Btu/ft <sup>2</sup> h °F
Tank Coils, Steam/Water (Temperature difference 50°F)	100 to 225
Tank Coils, Steam/Water (Temperature difference 100°F)	175 to 300
Tank Coils, Steam/Water Temperature difference 200°F	225 to 475
Reasonable Practical Heat Transfer Rates	
Tank Coils, low pressure with natural circulation	100
Tank Coils, high pressure with natural circulation	200
Tank Coils, low pressure with assisted circulation	200
Tank Coils, high pressure with assisted circulation	300

## Heat Emission Coefficients from Pipes Submerged in Miscellaneous Fluids

The viscosity of fluids has a considerable bearing on heat transfer characteristics and this varies in any case with temperature. The following figures will therefore serve only as a rough guide.

Immersed steam coil, medium pressure, natural convection

	Btu/ft <sup>2</sup> h °F difference
Light Oils	30
Heavy Oils	15 to 20
*Fats	5 to 10

Immersed steam coil, medium pressure, natural convection

	Btu/ft <sup>2</sup> h °F difference
Light Oils (220 SSU at 100°F)	100
Medium Oils (1100 SSU at 100°F)	60
Heavy Oils (3833 SSU at 100°F)	30

## Average Heat Loss from Oil in Storage Tanks and Pipe Lines

Position	Oil Temperature	* Heat Transfer Rate in Btu/ft <sup>2</sup> h °F temperature difference between oil and surrounding air	
		Exposed	Insulated
Tank Sheltered	Up to 50°F	1.2	.3
	Up to 80°F	1.3	.325
	Up to 100°F	1.4	.35
Tank Exposed	Up to 50°F	1.4	.35
	Up to 80°F	1.5	.375
	Up to 100°F	1.6	.4
Tank In Pit	All Temperatures	1.2	—
Pipe Sheltered Line	Up to 80°F	1.5	.375
	80 to 260°F	2.3	.575
Pipe Exposed Line	Up to 80°F	1.8	.45
	80 to 260°F	2.75	.7

\* For maximum heat loss the "surrounding air temperature" may be 25°F higher or lower according to country and locality.

For rough calculations it may be taken that 1 ton of fuel oil occupies 36 .4 ft<sup>3</sup>. The specific heat capacity of heavy fuel is 0.45 to 0.48 Btu/lb °F.

### Heat Transfer from Steam Coils

Approximately 20 Btu/h per square foot of heating surface per °F difference between oil and steam temperature.

### Heat Transfer from Hot Water Coils

Approximately 10 Btu/h per square foot of heating surface per °F difference between oil and steam temperature.

## Heat Loss from Open Tanks

Liquid Temp. °F	Heat Loss from Liquid Surface Btu/ft <sup>2</sup> h			Heat Lost through Tank Wall Btu/ft <sup>2</sup> h			
	Evap. Loss	Rad. Loss	Total	Bare Steel	1" Insulation	2" Insulation	3"
90	80	50	130	50	12	6	4
100	160	70	230	70	15	8	6
110	240	90	330	90	19	10	7
120	360	110	470	110	23	12	9
130	480	135	615	135	27	14	10
140	660	160	820	160	31	16	12
150	860	180	1040	180	34	18	13
160	1100	210	1310	210	38	21	15
170	1380	235	1615	235	42	23	16
180	1740	260	2000	260	46	25	17
190	2160	290	2450	290	50	27	19
200	2680	320	3000	320	53	29	20
210	3240	360	3590	360	57	31	22

The above values are for open tanks in 60°F still ambient air.

# Steam Tracing

## Designing of Steam Tracing

Recommended number of 1/2" tracers to meet average requirements

	Type A General frost protection or where solidification may occur at temps. below 75°F	Type B Where solidification may occur at temps. between 75 - 150°F	Type C When solidification may occur at temps. between 150 - 300°F
Product Line Size	Number of 1/2" Tracers	Number of 1/2" Tracers	Number of 1/2" Tracers
1"	1	1	1
1-1/2"	1	1	2
2"	1	1	2
3"	1	1	3
4"	1	2	3
6"	2	2	3
8"	2	2	3
10"-12"	2	3	6
14"-16"	2	3	8
18"-20"	2	3	10

As a general rule, length of tracers to 3/8" size should not exceed 60 ft. Larger size tracers should not exceed 150 ft. in length.

## Steam Size Connections for Jacketed Lines

Product Line	Jacket Diameter	Steam Connection
2-1/2"	4"	1/2"
3"	6"	3/4"
4"	6"	3/4"
6"	8"	3/4"
8"	10"	1"
10"	12"	1"

Length of jacket should not exceed 20 ft. In most cases 1/2" condensate outlet would be adequate but it is usual to make this same size as the steam connection as it simplifies installation.

## Recommended Header Size for Supplying Steam Tracer Lines

Header Size	Number of 1/2" Tracers
3/4"	2
1"	3 to 5
1-1/2"	6 to 15
2"	16 to 30

## Recommended Header Size for Condensate Lines

Header Size	Number of 1/2" Tracers
1"	Up to 5
1-1/2"	6 to 10
2"	11 to 25

# Steam Pipe Sizing

## Sizing for Pressure Drop per 100 ft. in Schedule 40 Pipe

Divide "Allowable Drop" by pressure factor and use chart to select pipe size.

### Based on 100 psig saturated steam

For other pressures, multiply chart  $\Delta P$  by factor below

# Steam Pipe Sizing

## How to Size Steam Pipes for Various Pressure and Velocity Conditions

To select pipe size in long mains and wherever supply pressure is critical, use the pressure drop chart to assure it is within allowable limits. Most saturated steam lines may be sized for a velocity of 4800 to 7200 ft/min; higher velocities should be avoided unless appreciable superheat is present.

Piping at pressure reducing stations should be sized for the same velocity on both sides of the PRV. This generally results in a valve smaller than the supply piping with still larger downstream pressure piping due to the increase in steam volume (see example below.)

Trap discharge piping contains a bi-phase flash steam/condensate mixture, and a lower velocity of 4000 to 6000 ft/min to the receiver encourages gravity separation. The receiver vent line is sized for the amount of flash vented at atmospheric pressure at a velocity of 3000 to 4000 ft/min.

### Velocity Chart Example

Given a steam heating piping system with a 100 psig inlet pressure ahead of a control valve with a capacity of 1,000 lb/h of steam reduced to 25 psig, find the smallest sizes of upstream and downstream piping for reasonable quiet steam velocities.

### Upstream Pressure Piping Sizing

Enter the velocity chart above at A for steam flow of 1,000 lb/h. Go over to point B where the 100 psig diagonal line intersects. Follow up vertically to C where an intersection with a diagonal line falls inside the 4,000-to-6,000 ft/min velocity band. Actual velocity at D is about 4,800 ft/min for 1-1/2" upstream piping. Selecting a smaller pipe size results in greater steam velocity and noise level.

### Downstream Piping Sizing

Enter the velocity chart at A for 1,000 lb/h. Go over to point E where the 25 psig diagonal line intersects. Follow up vertically to F where an intersection with a diagonal line falls inside the 4,000-to-6,000 ft/min velocity band. Actual velocity at G is 5,500 ft/min for 2-1/2" downstream piping.

### Formula for Velocity of Steam in Pipes:

$$V = \frac{2.4Q V_s}{A}$$

Where:

V = Velocity in ft/min

Q = Flow lb/h steam

Vs = Sp. Vol. in cu. ft<sup>3</sup>/lb at the flowing pressure

A = Internal area of the pipe — in<sup>2</sup>

# Condensate Line Sizing

Condensate return lines on the discharge side of steam traps must be able to accommodate the flow of both water and flash steam. While the percentage, by weight, of flash steam may be rather low, its overall volume in comparison to the liquid is very large. By determining the quantity of flash steam and sizing the return line for velocities between 4,000 and 6,000 ft/min, the two-phase flow within the pipe can be accommodated. The information required for sizing is the condensate load in lb/h, inlet pressure to steam trap(s) in psig and return line system pressure.

**Example:**

Size a condensate return line from a 160 psig steam trap discharging to 20 psig. flash tank. Load is 3,000 lb/h.

1. Determine percent flash steam produced using table. With a steam pressure of 160 psig and a flash tank pressure of 20 psig read a value of 12.4%.
2. Next, multiply the condensate load by the percent flash from step #1 to determine the flowrate, of flash steam produced.  
3,000 lb/h x .124 = 372 lb/h.

## Percent Flash Steam

Produced when Condensate is discharged to atmosphere or into a flash tank controlled at various pressures.

Pressure psig	Flash Tank Pressure — psig										
	Atmo-sphere 0	2	5	10	15	20	30	40	60	80	100
5	1.7	1.0	0								
10	2.9	2.2	1.4	0

20	4.9	4.2	3.4	2.1	1.1	0					
30	6.5	5.8	5.0	3.8	2.6	1.7	0				
40	7.8	7.1	6.4	5.1	4.0	3.1	1.3	0			
60	10.0	9.3	8.6	7.3	6.3	5.4	3.6	2.2	0		
80	11.7	11.1	10.3	9.0	8.1	7.1	5.5	4.0	1.9	0	
100	13.3	12.6	11.8	10.6	9.7	8.8	7.0	5.7	3.5	1.7	0
125	14.8	14.2	13.4	12.2	11.3	10.3	8.6	7.4	5.2	3.4	1.8
160	16.8	16.2	15.4	14.1	13.2	12.4	10.6	9.5	7.4	5.6	4.0
200	18.6	18.0	17.3	16.1	15.2	14.3	12.8	11.5	9.3	7.5	5.9
250	20.6	20.0	19.3	18.1	17.2	16.3	14.7	13.6	11.2	9.8	8.2
300	22.7	21.8	21.1	19.9	19.0	18.2	16.7	15.4	13.4	11.8	10.1
350	24.0	23.3	22.6	21.6	20.5	19.8	18.3	17.2	15.1	13.5	11.9
400	25.3	24.7	24.0	22.9	22.0	21.1	19.7	18.5	16.5	15.0	13.4

3. Enter Condensate Recovery Sizing chart at the flash steam flowrate of 372 lb/h at "A" and move horizontally to the right to the flash tank pressure of 20 psig "B". Rise vertically to choose a condensate return line size which will give a velocity between 4,000 and 6,000 ft/min, "C". In this example, an 1-1/2" schedule 40 pipe with a velocity of approximately 5,000 ft/min. If schedule 80 pipe is to be used, refer to table within body of chart. Multiply the velocity by the factor to determine whether the velocity is within acceptable limits.

# Flash Tank and Vent Line Sizing

## How to Size Flash Tanks and Vent Lines

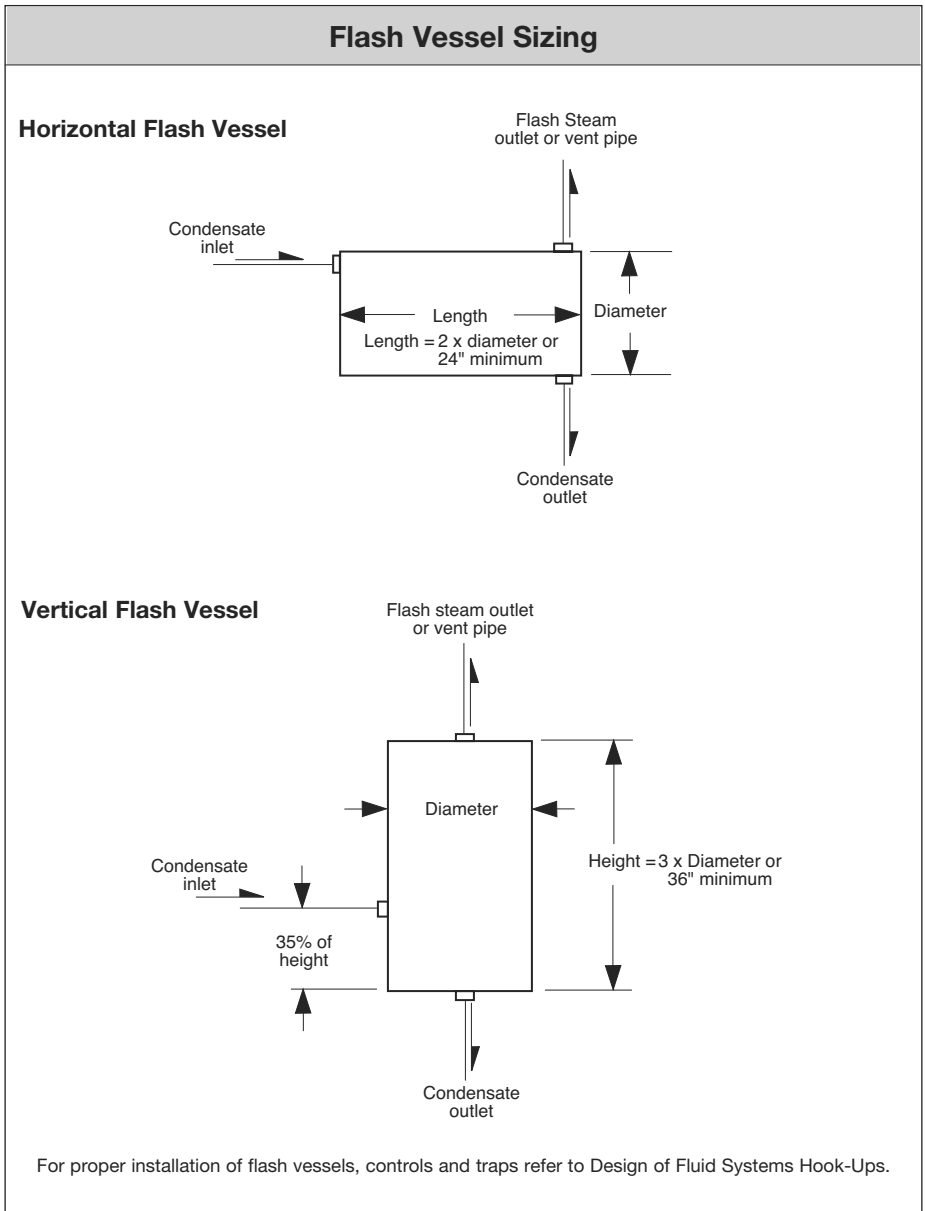

Whether a flash tank is to be atmospheric or pressurized for flash recovery, the procedure for determining its size is the same. The most important dimension is the diameter. It must be large enough to provide adequate separation of the flash and condensate to minimize condensate carry over.

### Example:

Size a 20 psig flash recovery vessel based on the information in the example on page 582 (condensate line sizing).

1. Using the calculated flash steam quantity of 372 lb/h enter Condensate Recovery Sizing chart on page 112 at "A" and move horizontally to the right to the flash tank pressure of 20 psig "B". Rise vertically to the flash tank diameter line (600 ft/min) at "D". Read tank diameter of 5". If schedule 80 pipe is to be installed, the table within the body of the chart can be used to determine whether the velocity will exceed the recommended limit of 600 ft/min.
2. From point "D" continue to rise vertically to "E" to determine the size of vent pipe to give a velocity between 3000 and 4000 ft/min. In this case 2" schedule 40 pipe. As before, use the table within the body of chart for schedule 80 pipe.

Flash vessels can be either horizontal or vertical. For flash steam recovery (pressurized receiver) the vertical style is preferred because of its ability to provide better separation of steam and water.

## Steam Trap Selection Guide

As the USA's leading provider of steam system solutions, Spirax Sarco recognizes that no two steam trapping systems are identical. Because of the wide array of steam trap applications with inherently different characteristics, choosing the correct steam trap for optimum performance is difficult. Waterhammer, superheat, corrosive condensate, or other damaging operating characteristics dramatically affect performance of a steam trap. With over 80 years of experience in steam technology, Spirax Sarco is committed to helping it's customers design, operate and maintain an efficient steam system. You have our word on it!
